"Antisthenes being asked, what learning was most necessary for man's life, replied, "To unlearn that which is naught."

Bacon's Aphorism.

"Authority keeps in ignorance and error more people than all other causes. — No opinion is too absurd to be received on this ground."

Locke.

NEW-HAVEN:
Printed by Oliver Steele & Co.
FOR BRISBAN & BRANNAN, BOOKSELLERS, NEW-YORK.
1807.
District of Connecticut, to wit:

BE IT REMEMBERED, That on the twelfth day of March, in the thirty-first year of the Independence of the United States of America, Noah Webster, Esq. of the said District, hath deposited in this office the title of a Book, the right whereof he claims as author, in the words following, to wit:

"A Philosophical and Practical Grammar of the English Language. By Noah Webster, Esq."

In conformity to the Act of the Congress of the United States, intitled "An act for the encouragement of Learning, by securing the copies of Maps, Charts and Books to the authors and proprietors of them, during the times therein mentioned."

H. W. Edwards,
Clerk of the District of Connecticut.

March 12, 1807.
WHAT, another Grammar of the English Language! says the man of letters, upon the publication of this work. Have we not Grammars enough already? No, it may be answered; for if the theory of the particles unfolded in Horne Tooke's "Diversions of Purley," is well founded, we have not hitherto had any correct Grammar of our language. A Grammar, to deserve the title, must contain a true explanation of the several species of words, a correct classification of them, and a developement of the real principles of combination in the structure of sentences.

If such a work has hitherto appeared, it has not come to my knowledge. Indeed, without understanding the etymologies of the indeclinable parts of speech, those eminent scholars, Harris, Lowth and Johnson, could no more construct an English Grammar upon the true principles of the language, than Lord Bacon or Sir Isaac Newton could compose a system of chemistry, upon the principles of Lavoisier.

The "Diversions of Purley" first caught my attention in the year 1787. Not willing to rest my belief on the authorities cited by Mr. Tooke, I entered upon an investigation of his principles, for the purpose of obtaining full evidence of their
correctness; and my inquiries, while they have detected some errors in his work, have resulted in full persuasion of mind, or rather in absolute certainty, that his general theory is well founded. It is now an ascertained and a received fact, that the indeclinable words, in our language, (and probably in all others) are derived from declinable words, and were primitively significant, as verbs, nouns, adjectives or participles. Many of them may yet be traced to their roots, and their significations ascertained; and their present meanings, faithful to the original ideas, expressed by their radicals, cannot be defined, without resorting to the sense of the primitive words.

I have long expected that some English scholar would attempt to reduce these discoveries to practical use, by framing a system of rules to illustrate the construction of sentences, upon the genuine principles of the language. Being hitherto disappointed, and seeing nothing issue from the press but new compilations of old rules, and fresh editions of the same errors; I have at length undertaken to construct a Grammar, upon what my own researches into the ancient English, or Saxon language, with various and extensive reading in modern books, have proved, to my full satisfaction, to be its only legitimate principles, and established usages.*

* Since the days of Wallis, who published a Grammar of the English Language, in Latin, in the reign of Charles II. from which Johnson and Lowth borrowed most of their rules, little improvement has been made in English Grammar. Lowth supplied some valuable criticisms, most of which however respect obsolete phrases; but many of his criticisms are extremely erroneous, and they have had an
In examining this subject with attention, I soon found it difficult, or rather impracticable, to exhibit the true state of the language, without altering some of the usual names, and the present distribution of the parts of speech. These names and this distribution have the sanction of antiquity; some of the classes of words still bearing the names assigned to them in the days of Aristotle; and I am no stranger to the power of custom. But in the sciences prescription cannot legalize error; and I fully accord with the sentiment in my motto, that the most necessary learning is, "to unlearn that which is naught." From a minute and careful survey of this subject in all its bearings, I am firmly persuaded that, with the present classification of English words, under the usual names, the true construction of sentences, with the force and effect of the words composing them, cannot be explained, so as to be clearly understood by a student. That the language has not hitherto been understood, so as to be grammatically explained, will probably appear evident to the readers of this work. Even the origin and uses of the two little words, an and the, have escaped the inquisitive researches of Grammarians; ill effect, in perverting the true idioms of our language. Priestley furnished a number of new and useful observations on the peculiar phrases of the English Language. To which may be added some good remarks of Blair and Campbell, interspersed with many errors. Murray, not having mounted to the original sources of information, and professing only to select and arrange the rules and criticisms of preceding writers, has furnished little or nothing new. Of the numerous compilations of inferior character, it may be affirmed, that they have added nothing to the stock of grammatical knowledge.
so that, at the very threshold of our rudiments, we stumble upon most palpable error.

The term article, which signifies a joint, is unmeaning and inapplicable to the words in question. 

An or a and the are not a distinct part of speech in our language. An is simply the old English or Saxon orthography of one; as the latter, is an awkward spelling of the French une, from the Latin unus; and the is the same word, or at least has the sense of the Saxon pronoun tha, that, the, them, thy. These words belong to the same class.*

The term substantive, is not sufficiently distinctive, nor intelligible; and noun, being merely technical, is not readily understood by learners. Nothing facilitates the study of the sciences more effectually than the use of plain intelligible terms; and whenever such can be found, they are always to be preferred, that the difficulty of using new and unknown terms, may not be added to that of learning new principles. Name, for things which exist, being a literal translation of the Greek onoma, and the Latin nomen, and a word which every child understands, is the term which obviously suggests itself as most proper to designate that numerous and important class of words.

Pronoun, that is, in the place of a noun, is a more exceptionable term; for most of the words called by this name, are often used in the place of

* An, the Latin unus, the Greek en, the Celtic con, yman or ymnan, are derived by Whiter from the element an or en, denoting being; the root of the Hebrew ane, I, the Latin ens, being, and of the participial terminations in amans, tiens—P. 475.
sentences and adjectives, as well as of nouns. The term does not comprehend the words arranged under it. I have therefore used, in lieu of it, substitute, a term which describes the use of the words of this class, and comprehends the whole number, whether the particular words stand for nouns, adjectives or sentences.

The term adjective denotes something added or to be added; a term equally applicable to the adverb, or even to other parts of speech. The name is not sufficiently significant and descriptive; and being merely technical, I have substituted in the place of it, attribute, a term which describes intelligibly the nature and uses of this class of words.

The verb, or word by way of eminence, is not sufficiently descriptive of the important class of words which it is intended to include. But I know of word in the language which is adequate to this purpose. Affirmation is a correct term for verbs in the indicative mode; but is not sufficiently comprehensive. I have therefore retained the present name.

To the term adverb, there is the same objection as to pronoun and adjective. Adverb is significant of position only, and not of the nature and use of the words it comprehends. Nor does it include the same words in every situation; for the words so called as often qualify adjectives as verbs; as extremely cold.

I have therefore given to this class of words the appellation of modifiers, a word well formed like magnifier, and happily expressive of their use, which is to modify the sense of verbs and
attributes. No word perhaps in any language could be equally well adapted to its use.

*Preposition* is also a word significant of *position* only; but I know of no single term in the language which will describe its uses; and as new words ought not to be introduced without a peculiar fitness for their purpose, the old name is retained. These words however, where they follow verbs as their essential adjuncts, as in the following examples, to *go up, come to, break out*, are classed with the modifiers; as they modify the verb, and give it a new sense.

To the term *conjunction*, there is this single objection; it denotes *a joining* instead of what it is meant to signify, which is, *a joiner*. I have adopted the term *connective*, which has been used by many writers, and is more appropriate.

If men cavil at this nomenclature of Grammar, there is an answer at hand, which an attentive inquirer will find to be true, that with the present names and distribution of the several classes of words, there is no possibility of resolving many well formed sentences which are found in every English book.

In the confusion which has proceeded from an ignorance of the real origin of the English particles, and the construction of sentences, words have been called by wrong names, and arranged in classes to which they have no relation. The substitutes, *as and that*, have been called *conjunctions*, altho they have no more connecting power, than *who or which*. They are not conjunctions in any legitimate English sentence; and
by classing them with conjunctions, verbs often occur, which are left without a nominative.

In the same confusion, some verbs and participles have been ranked with adverbs, conjunctions and prepositions; and the object after a verb has been supposed to be governed by a preposition. Adjectives, when used to qualify the action of verbs, have been denominated *adverbs*; and the connection of verbs and attributes with sentences and clauses of sentences, one of the most general and essential idioms of the language, has been almost totally overlooked. In the conjugation of verbs also, there is some error, and much imperfection; the definite tenses, as useful and important to be understood, as the others, having been neglected, or very partially displayed.

In short, the science of Grammar is nearly in the condition in which chemistry stood, about thirty years ago. The terms employed, like the spiritus sylvestris, the salt of Sylvius, the sugar of Saturn, the putty of tin, and the luna cornea of the old chemists, serve only to show the obscurity of men's ideas on the subject, and to bewilder the student. For the honor of our native tongue, the key to every science, it is presumed this subject will hereafter receive more attention; that a language, distinguished for its strength and copiousness, and in which all the arts and sciences are cultivated and illustrated with success, will no longer lie buried in the rubbish of unmeaning terms.

If it should be objected that a change of the names of the parts of speech, will create a difficulty in the learning of other languages, let it be
observed that some differences exist between different languages, which cannot be obviated; and it is not expedient to force an agreement between things, which nature or art has made dissimilar. The better way is, to explain every language just as it is, and frame a grammar of each language upon its own idioms.

But it would be easy to prove that many of the alterations here made, as applicable to other languages as to the English. For instance, the Latin neuter pronoun, id, is translated it, and referred to a thing, as its noun or antecedent; when in fact, it is the substitute for a sentence or series of narration preceding, like the English it and that, as explained in this work.—And what idea does a youth obtain by referring id to a thing, to any thing, he knows not what? A young learner may repeat, for years, rules of which he has not any clear ideas, and even apply them in most cases, without knowing the principles on which they are founded.

For the outline of the system here offered to the public, I am indebted to the "Diversions of Purley." The author of that work has pointed out the way to the temple of knowledge on this subject, unlocked the gate and presented a general view of the structure.* I have penetrated into the building, surveyed the interior apartments, and attempted a delineation of their several forms, with their dependencies, and the symmetry of the whole edifice.

* "Mr. Horne Tooke has unfolded, by a single flash of light, the whole theory of language, which had so long lain buried beneath the learned lumber of the schools." Darwin's Zoon, Sect. 39.
A PHILOSOPHICAL AND PRACTICAL

GRAMMAR.

Of Language.

LANGUAGE, in its most extensive sense, is the instrument or means of communicating ideas and affections of the mind and body, from one animal to another. In this sense, brutes possess the powers of language; for by various inarticulate sounds, they make known their wants, desires, and sufferings. Thus the neighing of the horse, the lowing of the ox, the cackling and chirping of birds, constitute the language of those animals; and each respective species understand instinctively their own peculiar language. The signs made by deaf and dumb people form also a kind of imperfect language; and even the looks when made to express ideas or affections, speak an intelligible language.

As brutes have few affections or ideas, and little necessity for communicating them, their language consists in a few inarticulate sounds; that is, sounds uttered without much aid from the tongue or other organs of modulation, and of course, with little variation. But man, being a rational animal, capable of acquiring, and of learning to communicate, numberless ideas, is furnished with suitable organs for uttering an indefinite variety of sounds to express his ideas; and the modulations of his voice, in the distinct utterance of sounds, constitute what are denominated articulate sounds.
Division of Language.

Language is of two kinds, spoken and written. The elements of spoken language are articulate sounds uttered by the voice, which is formed by the air issuing through the glottis, a small aperture in the wind pipe, and modulated by the action of the throat, tongue, palate, teeth, lips, and nostrils. This is the original and proper sense of the word, language.

But as sounds are fleeting, and not capable of being communicated to a great distance, if men had no other means of communicating their thoughts, their intercourse would be limited to a small compass, and their ideas would be entrusted to memory and tradition only; by which they would soon be obscured, perverted, or forgotten. Hence the invention of characters to represent sounds, exhibit them to the eye, and render them durable. This was the origin of written language. The elements of this language are letters or characters, which, by consent of men, and common usage, are combined into words, and made to represent the articulate sounds uttered by the voice. These characters being easily inscribed or engraved upon durable substances, as paper, parchment, wood and stone, render language permanent, and capable of being transmitted from age to age, and of being communicated over the habitable globe. Of this art, it is not easy to decide which deserves to be most admired, the difficulty, the ingenuity, or the usefulness of the invention.

Of Grammar.

Grammar, as a science, treats of the natural connection between ideas, and words which are the signs of ideas, and develops the principles which are common to all languages. These principles are not arbitrary, nor subject to change, but fixed and permanent; being founded on facts and distinctions established by nature. Thus the distinction between the sexes; between things and their qualities; between the names of substances and of their actions or
motions; between unity and plurality; between the present, past and future time, and some other distinctions are founded in nature, and give rise to different species of words, and to various inflections in all languages.

The grammar of a particular language is, a system of general principles derived from natural distinctions of words, and of particular rules deduced from the customary forms of speech in the nation using that language. These usages are mostly arbitrary, or of accidental origin; but when they become common to a nation, they are to be considered as established, and received as rules of the highest authority.

A rule therefore is an established form of construction in a particular class of words. Thus the usual addition of *s or *es, to a noun, to denote plurality, being a general practice, constitutes a rule.

An exception to a rule, is, the deviation of certain words from the common construction. Thus, *man, if regularly formed in the plural, would be *mans; but custom having established the use of *men as its plural, the word is an exception to the general rule.

Grammar is commonly divided into four parts—orthography, etymology, syntax and prosody.

Orthography treats of the letters, their powers and combinations in syllables; or, it teaches the true manner of writing words, called spelling.

Etymology treats of the derivation of words from their radicals or primitives, and of their various inflections and modifications to express person, number, case, sex, time and mode.

Syntax explains the true mode of constructing sentences.

Prosody treats of the quantity or accent of syllables and the laws of versification.

Note...In this compilation, the only subjects treated, are, a part of etymology, and syntax and prosody.
CLASSIFICATION OF WORDS.

Words are naturally divided into two Classes, Primary and Secondary.

The first class consists of words which are essential to the language of men; on which other words depend, or to which they are added as auxiliaries. In this class are included the Noun or Name, and the Verb. These two species of words are so necessary to a communication of ideas, that no complete sentence or proposition can be formed without the use of both, unless when a substitute is used for a name. Thus, the sun shines, is a complete sentence, containing a name and a verb; but remove either of them, and the proposition is destroyed. From the importance of these words, as well as from their being, in all languages, primitive radicals, from which, many or most other words are formed, they are here denominated Primary, or the Primary Parts of Speech.

The second class consists of words of secondary or subordinate use, or of such as are dependent on other words in construction. Of these there are several species.

1st. Words which supply the place of other words and of sentences, which are here called substitutes.

2d. Words which express the qualities of things, and which therefore are attached to the names of those things. These are here called attributes or attributives. These are primary words in point of importance; but being necessarily dependent on other words in construction, they are here ranked with the secondary.

3d. Words which modify the sense of other words by expressing the manner of action, or degree of quality. These are here called Modifiers.

4th. Words which are placed before other words, and show the relation between them and those which precede. These are called Prepositions.

5th. Words which join together the parts of a sentence
or of discourse, in a regular construction. These are called *connectives* or *conjunctions*.

These five species of subordinate or dependent words are denominated *secondary*.

There are therefore two classes of words containing seven species or *parts of speech*. The first class contains two species.

I. *Names* or *nouns* which are the signs of our ideas of whatever we conceive to exist, material and immaterial

II. *Verbs* which express affirmation, action or being.

The second class contains five species.

III. *Substitutes*, words which are used in the place of other words or of sentences. [pronouns.]

IV. *Attributes*, which express the qualities of things, and qualify the action of verbs, or the sense of other attributes and modifiers. [adjectives.]

V. *Modifiers*, which qualify the action of verbs, and the sense of attributes. [adverbs.]

VI. *Prepositions*, which show the relation between words, and also the condition of things.

VII. *Connectives*, which unite sentences in construction. [conjunctions.]

*Note*: Participles are, by some grammarians, considered as a distinct part of speech; and they certainly have some claims to be so considered, but I have chose to follow the common arrangement, which is attended with no inconvenience.

**Names or Nouns.**

A *name* is a word which expresses the idea of that which exists, material or immaterial.—Of material substances, as man, horse, tree, table,—of immaterial things, as faith, hope, love. These and similar words are, by customary use, made the *names* of things which exist, or the symbols of ideas, which they express without the help of any other word.
A PHILOSOPHICAL AND

Division of Names.

Names are of two kinds; common, or those which represent the idea of a whole kind or species; and proper or appropriate, which denote individuals. Thus animal is a name common to all beings, having organized bodies and endowed with life, digestion, and spontaneous motion. Plant and vegetable are names of all beings which have organized bodies and life, without the power of spontaneous motion. Bird and fowl are the common names of all feathered animals which fly—fishes, of animals which live wholly in water.

On the other hand, Thomas, John, William, are proper or appropriate names, each denoting an individual of which there is no species or kind. London, Paris, Amsterdam, Rhine, Po, Danube, Massachusetts, Hudson, Patomac, are also proper names, being appropriate to individual things. Proper names however become common when they comprehend two or more individuals; as, the Capets, the Smiths, the Fletchers...."Two Roberts there the pagan force defy'd." Hoole's Tasso, b. 20.

Limitation of Names.

Proper names are sufficiently definite without the aid of another word to limit their meaning, as Boston, Baltimore, Savannah. Yet when certain individuals have a common character, or predominant qualities which create a similitude between them, this common character becomes in the mind a species, and the proper name of an individual possessing this character, admits of the definitives and of plural number, like a common name. Thus a conspirator is called a Cataline; and numbers of them, Catalines, or the Catalines of their country. A distinguished general is called a Cesar—an eminent orator the Cicero of his age.

But names, which are common to a whole kind or species, require often to be limited to an individual or a certain number of individuals of the kind or species. For this purpose the English language is furnished with a number of
words, as *an*, or *a*, *the*, *this*, *that*, *these*, *those*, and a few others, which define the extent of the signification of common names, or point to the particular things mentioned. These are all attributes, having a dependence on some noun expressed or implied; but some of them are used also as substitutes. Of these, *an* or *a* and *the* are never employed as substitutes, but are constantly attached to some name, or an equivalent word; and from their peculiar use, have obtained the distinctive appellation of *articles*. But *definative* is a more significant and appropriate term; as they are definative attributes, and have, grammatically considered, the like use, as, *this*, *that*, *some*, *none*, *any*.

*An* is simply the Saxon *one*, or *an*, one. It was formerly written *an* before a consonant,* but for the ease and rapidity of utterance, it is written and pronounced *a* before a consonant, and before a vowel, which includes the sound of a consonant; as, a pen, a union. It retains its primitive orthography *an*, before a vowel, and a silent consonant; as, an eagle, an hour.

*The* is used before vowels and consonants; but in poetry, *e*, for the sake of measure, may be omitted, and *th* made to coalesce with a succeeding vowel as “th’ embroidered vest.” Sometimes we find an elision of *e* before *h*, as

“Far in th’ horizon to the north appeared.” *Milton.*

“Sits on th’ horizon round a settled gloom.” *Thompson.*

But this elision usually renders the line harsh; and before the word *horizon*, with a false unnatural accent, creates a disagreeable hiatus.

**RULE I.**

A noun or name, without a preceding definitive, is used either in an unlimited sense, extending to the whole species, or in an indefinite sense, denoting a number or quantity, but not the whole.

“*The proper study of mankind is man.*” *Pope.*

Here *man* comprehends the whole species.

“*In the first place, woman has, in general, much strong—*”

*And this year were slain nine earls and one king.*—*Saxon Chron.* p. 82.
er propensity than man to the perfect discharge of parental duties." Life of Cowper.

Here woman and man comprehends each the whole species of its sex.

"From whom also I received letters unto the brethren." —Acts 22.

"The men were overwhelmed by the waves, and absorbed by the eddies. Horses, baggage and dead bodies, were seen floating together."

In these passages, letters, horses, and dead bodies, without a definitive, denote an indefinite number, but not all. So in the following sentence:

A house is consumed by fire—fire is extinguished by water.

Note...The rule laid down by Lowth, and transcribed implicitly by his followers, is general. "A substantive without any article to limit it, is taken in its widest sense; thus man means all mankind." The examples already given prove the inaccuracy of the rule. But let it be tried by other examples.

"There are fishes that have wings, and are not strangers to the airy regions."—Locke, b. 3, ch. 6. 12. If the rule is just, that fishes is to be "taken in its widest sense," then all fishes have wings!

"When ye shall see Jerusalem compassed with armies"—What! all armies! "There shall be signs in the sun"—What! all signs? "Nation shall rise against nation"—What! every nation? How the rule vanishes before the test!

Rule II.

The definitive an or a, being merely one, in its English orthography, and precisely synonymous with it, limits a common name to an individual of the species—Its sole use is to express unity, and with respect to number, is the most definite word imaginable—as an ounce, a church, a ship, that is, one ship, one church. It is used before a name which is indefinite, or applicable to any one of a species; as

"He bore him in the thickest troop, As doth a lion in a herd of neat." Shakespeare.

Here a limits the sense of the word lion, and that of herd to one—but does not specify the particular one—"As any lion does or would do in any herd."
This definitive is used also before names which are definite and as specific as possible: as, "Solomon built a temple." "The Lord God planted a garden eastward in Eden." London is a great commercial city. A decisive battle was fought at Marengo. The English obtained a signal naval victory at the mouth of the Nile.∗

NOTE.

∗ "A respects the primary perception and denotes individuals as unknown—the respects our secondary perceptions and denotes individuals as known. A leaves the individual unascertained, whereas the article the ascertains the individual also.

"A has an indefinite signification and means one, with some reference to more."

Johnson Dict. Grammar.

"A is used in a vague sense to point out one single thing of the kind, in other respects indeterminate"—"a determines it to be one single thing of the kind, leaving it still uncertain which."

Lowth's Introduction.

"A is styled the indefinite article: it is used in a vague sense to point out one single thing of the kind, in other respects indeterminate."

So great scholars write, and so their disciples copy! But let us try this rule. Harris wrote, or rather compiled from Greek Grammarians, "A Philosophical Inquiry concerning Universal Grammar"—Johnson compiled. "A Dictionary of the English Language"—Lowth wrote "A short Introduction to English Grammar"—Now I request some of the gentlemen, who teach the rules of these Grammars, to inform the world whether a, in the titles recited, denotes one thing of the kind, in other respects, indeterminate.

This request I presume to be a reasonable one, as it certainly is a determinate one. Suppose a man to have received a severe wound, a fracture of the leg, or of the skull; however indeterminate the man may be, his grammars will hardly convince him that a broken head or leg is a very indeterminate thing.

Chares erected a huge Colossus at Rhodes—Romulus built a City in Italy and called it Rome—Great-Britain has a navy superior to any on the ocean—Love to God is an indispensable duty—Virgil composed an epic poem—The Earl of Chatham was an eminent statesman—Oxygene is a substance which forms acids—the carbonic acid is a combination of oxygene and carbon—the air is an invisible, elastic fluid—Lisbon was destroyed by an earthquake in 1755—that is, according to our grammars, any earthquake, uncertain which.

The history of this word is briefly this. An and one are the same word—as, the Saxon or English orthography, and one a corruption.
NOTE...When the sense of words is sufficiently certain, by the construction, the definitive may be omitted, as “Duty to your majesty, and regard for the preservation of ourselves and our posterity, require us to entreat your royal attention.”

It is also omitted before names whose signification is general, and requires no limitation—as “wisdom is justified of her children”—“anger resteth in the bosom of fools.”

of the French an or une. The Greek en, the Latin unus, that is, un with the usual ending of adjectives, and the Saxon on or one, are mere dialectical differences of orthography, as are the German ein, and the Dutch een. Before the conquest, an was used in computation or numbering—an, two, three—one, two, three, &c.; and the a was used before consonants, as well as before vowels—“Ac him sed hya an”—But to him said one of them.—Alfred Orosius, Lib. 6. 30. “An cyning”—one king.—Sax. Chron. p. 82. This word was also varied to express case and gender, like the Latin unus.

“And thas ymb ane moneth”—And within this one month.—Sax. Chron. 82. “The on tham anum scipe weron”—Who were in that one ship.—Ibnm. 98. An therefore is the original English adjective or ordinal number one; and was never written a until after the conquest.

The conquest, with other innovations, introduced into books the French an, une, from the Latin unus; the French being the only court language for three or four centuries. But the English an was retained in popular usage; and both words, or rather both orthographies, maintained their ground—but the meaning of both is precisely the same. The only differences between the words are these—an is no longer used in arithmetic or as an ordinal number—the its only signification is unity—nor can we use an as a substitute, without a noun, as we do, ant—John is one of them. But altho an cannot, in these applications, be used for one, the latter can always be used for an.

Hence we see that an or a is a mere adjective; or as I should call it, an attribute expressing unity, and, grammatically considered, it has no character which is not common to every ordinal number in the language. It has not the smallest effect in marking the indeterminateness of names. So far is this word from affecting the noun, in regard to its definitness, that its own character of definitness or indefinitness, depends, like that of other attributes, upon the name to which it is prefixed. “Bring me an apple,” is indefinite—any apple; “Solomon built a temple”—is definite, as he built but one, and that is known or determinate. “Bring me two oranges,” is indefinite; “Christ was crucified between two thieves,” is definite—and so of every number in the language.

Hence also we observe the mistake in all English grammars, that a becomes an before a vowel. The fact is the reverse; an becomes a before a consonant—an being the original word.

In the German, Dutch and French, this word is called an article also, but the article and the ordinal number are not distinguished in
The definitive *a* is used before plural names, preceded by *few* or *many*—as *a few days, a great many persons.*

It is also used before any collective word, as, *a dozen, a hundred,* even when such words are attached to plural nouns; as, *a hundred years.*

It is remarkable that *a* never precedes *many* without the intervention of *great* between them—but follows *many,* standing between this word and a name—and what is equally singular, *many,* the very essence of which is to mark plurality, will, with *a* intervening, agree with *a* name in the singular number; as

> "Full many a gem of purest ray serene."  
Gray.

> "Where many a rosebud rears its blushing head."  
Beattie.

**RULE III.**

The definitive *the* is employed before names, to limit their signification to one or more specific things of the kind, discriminated from others of the same kind. Hence the person or thing is understood by the reader or hearer, as, *the twelve Apostles, the laws of morality, the rules of good breeding.*

This definitive is also used with names of things which exist alone, or which we consider as single; as, *the Jews, the Sun, the Globe, the Ocean—And also before words when used by way of distinction, as, the Church, the Temple.*

**RULE IV.**

*The* is used rhetorically before a name in the singular number, to denote the whole species, or an indefinite number; as *"the fig-tree puttheth forth her green figs."*  
Sol. Songs.

Orthography, and the word, even when absurdly called an article, is varied to express gender and case—German *ein, eine, ein*—Dutch *een, eene*—French *un, une.*

* The origin of this use of *a* before *many* is to be sought in the primitive character of *many,* which was a noun in the Gothic and Saxon, synonymous with *multitude. A many* was therefore correct. Its use as an attribute is secondary or derivative; but this use carries with it the definitive *a,* in anomalous phrases.
"The almond tree shall flourish, and the grasshopper shall be a burden."—"Or ever the silver cord shall be loosed—or the golden bowl be broken," &c. Ecclesiastes.

"There loaded camels move in solemn state,
And the huge elephant's unwieldy weight."—Tasso, b. 15.

"For here the splendid treasures of the mine,
And richest offspring of the field combine."—Lusiad 2.

"The Christian, who, with pious honor, avoided the abominations of the circus or the theater, found himself encompassed with infernal snares, &c."—Gib. Rom. Emph. ch. 15.

"The heart likes naturally to be moved and affected."
—Campbell's Rhet. ch. 2.

**Note 1.** This definitive is also used before names employed figuratively in a general sense, as

"His mates their safety to the waves consign."—Lusiad 2.

Here *waves* cannot be understood of any particular *waves*; but the word is a metaphor for a particular thing, the *ocean*.

**Note 2.** Names are also restricted in their signification by other definitives, by various attributes, and any words of description which discriminate one thing from another, as

"See barbarous nations at thy gates attend,
Walk in thy light, and in thy temples bend."—Pope's Messiah.

"From every face he wipes off every tear."—ibid.

"The tender lambs he raises in his arms."—ibid.

"These swell their prospects and exalt their pride."—Rape of the Lock.

"For spirits, freed from mortal laws, with ease
Assume what sexes and what shapes they please."—ibid.

In addresses and exclamations, the definitive may be, and usually is, omitted—as "Sink down, ye mountains, and ye valleys rise"—

"Be smooth, ye rocks; ye rapid floods, give way."—Pope, Mest.

"Granville commands; your aid, O Muses, bring."—Wind, forest.

**Note 3.** The definitive *the* is used before an attribute, which is selected from others belonging to the same object; as "The very frame of spirit proper for being diverted with the laughable in objects, is so different from that which is necessary for philosophizing on them."—Campbell, Rhet. I. 2.
Note 4... The definitive *the* has been classed with *a*, as an article or part of speech, distinct from *this* and *that*, but evidently without good reason. If we attend to the uses of these words, we shall find very little difference between *the* and *this* or *that*. The Saxon definite article *se* is no longer used, but it was also used for the pronoun *he*. The Saxon *the* was our present relative *which*—and the Saxon *tha*, *the*, *thy*, were used indifferently for the article *the* or a substitute, *he* or *who*—and *the*, in modern English, has the sense of *that* or *this*, as in the phrases, "this sinks the deeper, or rises the higher"—for in the Saxon, *the* was a pronoun, in such phrases: *the* bet, *co melius*, the better,—*the swither*, the more, that is, *that* better, *that* more. From examining Saxon authors, it appears evident that *the* was originally a pronoun or substitute—and it retains the sense of *that* in most cases. But as *one* has in modern times, gained a use which *an* has not, *so* that and *this* (tho before names they have the sense of *the*, for *the* man you saw and *that* man you saw, are of the same import) are often used as substitutes and for emphasis in cases where *the* cannot be employed. *The* and *that* are the Hebrew intensive particle *at*, which the Greeks formed into *to* and *tahton*, and which the Saxons expressed by *se*, *so*, *the*, *them*, *tha*, *thy* and *that*. In German *the* and *that* are the same—*der*, *die*, *das*, in the three genders. In the Celtic also, the article *an* signifies *the* and *that*—nor is there the shadow of a reason for considering the article as a distinct part of speech, either in our own language, or in any other with which I am acquainted. In the Saxon *se*, *that* and *them* are classed together, inflected together, and called by the learned Hickes the *article* or *pronoun demonstrative*.

Number.

As men have occasion to speak of a single object, or of two or more individuals of the same kind, it has been found necessary to vary the name, and usually the termination, to distinguish plurality from unity. The different forms of words to express one or more are called in Grammar, *numbers*; of which there are in English, two, the *singular* and the *plural*. The *singular* denotes an individual, or a collection of individuals united in a body; as, a man, a ship, an office, a company, a society, a dozen. The *plural* denotes two or more individuals, not considered as a collective body; as, men, ships, offices, companies, societies. The plural number is formed by the addition of *s* or *es* to the singular.

Rule 1. When the terminating letter of a name will admit the sound of *s* to coalesce with the name or the last syll-
A PHILOSOPHICAL AND

Table of it, s only is added to form the plural; as sea, seas; hand, hands; pen, pens; grape, grapes; vale, vales; vow, vows.

2. When the letter s does not combine in sound with the word or last syllable of it, the addition of s increases the number of syllables; as, house, houses; grace, graces; page, pages; rose, roses; voice, voices; maze, mazes.

3. When the name ends in x, ss, sh, or ch, with its English sound, the plural is formed by adding es to the singular; for a single s after those letters cannot be pronounced; as, fox, foxes; glass, glasses; brush, brushes; church, churches. But after ch with its Greek sound, like k, the plural is formed by s only; as monarch, monarchs.

4. When a name ends with y after a consonant, the plural is formed by dropping y and adding ies; as, vanity, vanities. Alkali has a regular plural, alkalies.

But after ay, ey, and oy, s only is added; as, delay, delays; valley, valleys; joy, joys; money, moneys.

NOTE 1. We sometimes see valley, chimney, money, journey, and a few others, with like terminations, written in the plural with -vallies, chimneys, &c. But this irregularity is not to be vindicated. Either the singular number should be written valley, or the plural valleys. The latter is preferable.*

NOTE 2. A few English nouns deviate from the foregoing rules in the formation of the plural number:

Class I. In some names, s in the singular, is, for the convenience of utterance, changed into v; as,

<table>
<thead>
<tr>
<th>life</th>
<th>lives</th>
<th>self</th>
<th>selves</th>
<th>sheaf</th>
<th>sheaves</th>
</tr>
</thead>
<tbody>
<tr>
<td>knife</td>
<td>knives</td>
<td>half</td>
<td>halves</td>

<td>stays</td>
<td>wharf</td>
<td>wharves</td>
</tr>
<tr>
<td>calf</td>
<td>calves</td>
<td>loaf</td>
<td>loaves</td>
<td>thief</td>
<td>thieves</td>
</tr>
</tbody>
</table>

* The change of y into ies to form the plural number, may seem to a foreigner an odd irregularity; but the cause is very obvious. Formerly the singular number of this class of words, ended with ie, as, glorie, vanitie, energie, and the addition of s made the plural, glories. But whether from caprice, negligence, or a desire to simplify the orthography, the termination ie was laid aside for y in the singular number, while the old plural ies was retained. A strange inconsistency, but by no means the only one which the progress of our language exhibits.
Class 2. The second class consists of words which are used in both numbers, with plurals irregularly formed; as

<table>

</tbody>
</table>

Pennies is used for real coins; 

Pence for their value in computation.—

Dies denotes stamps for coining; dice, pieces used in games.—

Peas denotes the seeds as distinct objects; pease the seeds in a mass.—

Brothers is the plural used in common discourse; brethren, in the scripture style, but is not restricted to it.

Cherubim and Seraphim are real Hebrew plurals; but such is the propensity in men to form regular inflections in language, that these words are used as in the singular, with regular plurals, cherubims, seraphims. In like manner, the Hebrew singulairs, cherub and seraph, have obtained regular plurals.

The influence of this principle is very obvious in other foreign words, which the sciences have enlisted into our service; as may be observed in the words radius, focus, index, &c. which now begin to be used with regular English plural terminations. This tendency to regularity is, by all means, to be encouraged; for a prime excellence in language is the uniformity of its inflections. The facts here stated will be evinced by a few authorities.

"Vesiculated corallines are found adhering to rocks, shells and fucuses." Encyc. art. Corallines.

"Many fetuses are deficient at the extremities." Dar. Zoon. Sect. 1. 3. 9.

*Women is one of the grossest errors in our language. The true original plural is wimmen.
"Five hundred denariuses." *Baker's* *Livy*, 4. 491.

"The radiations of that tree and its fruit, the principal *focuses* of which are in the Maldives islands." *Hunter's St. Pierre*, vol. 3.

"The reduction of metallic *calxes* into metals." *Encyc.* *art.* *Metallurgy*.

In authorities equally respectable, we find *stamens, stratum*, *funguses*; and in pursuance of the principle, we may expect to see *lamens* for *lamina*; *lamels* for *lameliz*; *baryte*, for *barytes*; *pyrite* for *pyrites*; *strontite* for *strontites*; *stalactite*, or as the original would rather indicate, *stalacty*, and the plural *stalactites*. These reforms are necessary to enable us to distinguish the singular from the plural number.

**CLASS 3.** The third class of irregulars consists of such as have no plural termination; some of which represent ideas of things which do not admit of plurality; as rye, barley, flax, hemp, flour, sloth, pride, pitch, and the names of metals, gold, silver, tin, zinc, antimony, lead, bismuth, quicksilver. When, in the progress of improvement, any thing, considered as not susceptible of plurality, is found to have varieties, which are distinguishable, this distinction gives rise to a plural of the term. Thus in early ages our ancestors took no notice of different varieties of *wheat*, and the term had no plural. But modern improvements in agriculture have recognized varieties of this grain, which have given the name a plural form. The same remark is applicable to fern, clay, marl, sugar, cotton, &c. which have plurals, formerly unknown. Other words may hereafter undergo a similar change.

Other words of this class denote plurality, without a plural termination; as cattle, sheep, swine, line, deer, hose; trout, salmon, carp, perch, and many other names of fish. *Fish* has a plural, but is used in a plural sense, without the termination; as,

"We are to blame for eating these *fish*." *Anarcharsis* 6, 272.
"The fish reposed in seas and crystal floods, "The beasts retired in covert of the woods."

_Cannon, shot and sail are used in a plural sense, as One hundred cannon were landed from the fleet."

_Burchett Naval Hist. 732.

"Several shot being fired" Ibm. 455.

"Several sail of ships" Ibm. 426.

In the sense in which these words are here used, they hardly admit of a plural ending.

Under this class may be noticed a number of words, expressing time, distance, measure, weight and number, which, tho admitting of a plural termination, are often, not to say generally, used without that termination, even when used with attributes of plurality; such are the names in these expressions, two year, five mile, ten foot, seven pound, three tun, hundred, thousand, or million, five bushel, twenty weight, &c. Yet the most unlettered people never say, two minute, three hour, five day, or week, or month; nor two inch, yard or league; nor three ounce, grain, dram, or peck.

We observe this practice in the Saxon Chronicle. “He held that Arcebisceop-ricc eighteen year.”—p. 59. He held that archbishop-ricc eighteen year. In that work, winter is used in the same manner; forty-one winter—p. 41. Yet year and winter had, in the Saxon, plural terminations.

Here we see the origin of our pound. Originally it was merely weight—four thousand of gold by weight. From denoting weight generally, pondo became the term for a certain division or quantity; retaining however its signification of unity, and becoming an indeclinable in Latin. Twenty pound then, in strictness, is twenty divisions by weight; or as we say, with a like abbreviation, twenty weight.

These abbreviations are the wings of Mercury.

The words horse, foot and infantry, comprehending bo-
die of soldiers, are used as plural nouns and followed by verbs in the plural. Cavalry is sometimes used in like manner.

Class 4. The fourth class of irregular nouns consists of words which have the plural termination only. Some of these denoting plurality, are always joined with verbs in the plural; as the following:

- Annals
- archives
- ashes
- assets
- betters
- bowels
- compasses
- clothes
- calends
- breeches
- Annals
- archives
- ashes
- assets
- betters
- bowels
- compasses
- clothes
- calends
- breeches

Letters in the sense of literature, may be added to the foregoing list. Manners, in the sense of behavior, is also plural.

Other words of this class, the ending in s, are used either wholly in the singular number, or in the one or the other, at the pleasure of the writer.

- Amends
- aims
- bellows
- gallows
- odds
- means
- pains
- news
- riches
- wages
- billiards
- fives
- sessions
- measles
- hysteries
- physics
- ethics
- optics
- conics
- catoptrics
- dioptics
- pneumatics
- statics
- statistics
- spheric
- tactics
- economics
- mathematics
- mechanics
- hydraulics
- analytics
- politics

Of these, pains, riches and wages* are more usually considered as plural—news is always singular—odds and means are either singular or plural—the others are more strictly singular; for measles is the name of a disease, and in strictness, no more plural than gout or fever. Small pox, for

* Originally wagis, and really singular.
PRACTICAL GRAMMAR.

Pocks, is sometimes considered as a plural, but it ought to be used as singular. Billiards has the sense of game, containing unity of idea; and ethics, physics and other similar names, comprehending each the whole system of a particular science, do not convey the ideas of parts or particular branches, but of a whole collectively, a unity, and hence seem to be treated as words belonging to the singular number.

Politics contains two parts. Locke, vol. 2. 408.
Locke however uses a plural verb with ethics. "The ideas that ethics are conversant about."—B. 4. 12. 8.

Pains, when preceded by much, should always have a singular verb.
Means is so generally used in either number, every means, all means, this means, and these means, that authorities in support of the usage are deemed superfluous.
Gender.

Gender, in grammar, is a difference of termination, to express distinction of sex.

There being two sexes, male and female, words which denote males are said to be of the masculine gender; those which denote females, of feminine gender. Words expressing things without sex, are said to be of neuter gender.

There are therefore but two genders; yet for convenience the neuter is classed with the genders; and we say there are three, the masculine, feminine and neuter. The English modes of distinguishing sex are these:

1. The regular termination of the feminine gender, is *ess*; which is added to the name of the masculine; as lion, lioness.* But when the word ends in *or*, the feminine is formed by retrenching a vowel, and blending two syllables into one; as actor, actress. In a few words, the feminine gender, is represented by *ix*, as testatrix, from testator; and a few others are irregular. The following are most of the words which have a distinct termination for the feminine gender:

<table>

</tbody>
</table>

* This ending, *ess*, is the Hebrew *essa*, a female; as *or* and *er* are contradictions of *ir* and *er*, a man.
2. In many instances, animals, with which we have most frequent occasions to be conversant, have different words to express the different sexes; as man and woman; brother and sister; uncle and aunt; son and daughter; boy and girl; father and mother; horse and mare; bull and cow.

Man however is a general term for the whole race of mankind; so also, horse comprehends the whole species. A law to restrain every man from an offense would comprehend women and boys; and a law to punish a trespass committed by any horse, would comprehend all mares and colts. In like manner, goose, tho originally the name of the female, is used generally for the whole species; as is the plural geese.

3. When words have no distinct termination for the female sex, the sexes are distinguished by prefixing some word indicating sex; as a male rabbit, a female oppossum; a he goat, a she goat, a man servant, a maid servant; a male-coquet; a female-warrior; a cock-sparrow, a hen-sparrow.

4. In all cases, when the sex is sufficiently indicated by a separate word, names may be used to denote females without a distinct termination. Thus, altho females are rarely soldiers, sailors, philosophers, mathematicians or chemists; yet there is not the least impropriety in the application of these names to females, when they possess the requisite qualifications; for the sex is clearly marked by the word she or female; or the appropriate name of the woman; as “Joan of Arc was a warrior.” “The Amazons, a nation of female warriors.” *Ency, art. Amazons.*

5. Altho the English language is philosophically correct in considering things without life as of neither gender, yet by an easy analogy, the imagination conceives of inanimate things as animated and distinguished by sex. On this fiction, called personification, depends much of the descriptive force and beauty of poetry. In general, those objects which are remarkable for their strength, influence,

*The termination er or in Latin, is a contraction of vir, a man; as or in English is of wer, the same word in Saxon. But in common understanding, the idea of gender is hardly attached to these terminations; for we add er to words to denote an agent, without life, as grater, heater.*
and the attribute of imparting, take the masculine gender; those which are remarkable for the more mild and delicate qualities, for beauty and the attribute of producing, become feminine; the sun darts his scorching rays; the moon sheds her pater light.

"Indus or Ganges rolling his broad wave." Akenside.

"There does the soul Consent her soaring fancy to restrain." ibm.

"Now morn her rosy steps in th' eastern clime Advancing—" Milton P. L. b. 8.

"The north east spends his rage." Thompson.

Case.

Case in Grammar denotes a variation of words to express the relation of things to each other. In English, most of the relations are expressed by separate words; but the relation of property, ownership or possession, is expressed by adding s to a name, with an apostrophe; thus, John's book; which words are equivalent to "the book of John." This is called the Possessive Case. In English therefore names have two cases only, the nominative or simple name, and the possessive. The nominative before a verb and the objective after a verb are not distinguished by inflections, and are to be known only by position or the sense of the passage.

When the letter s, added as the sign of the possessive, will coalesce with the name, it is pronounced in the same syllable; as John's. But if it will not coalesce, it adds a syllable to the word, as Thomas's bravery, pronounced as if written Thomas's—the Church's prosperity, Church's prosperity. These examples show the impropriety of retrenching the vowel; but it occasions no inconvenience to natives.

When words end in es or ss, the apostrophe is added without s; as on eagles' wings; for righteousness' sake.
Substitutes.

Substitutes are of two kinds; those which are used in the place of the names of persons only, and may be called personal; and those which represent names, attributes, a sentence or part of a sentence, or a series of propositions.

The substitutes which are appropriate to persons, are, I, thou, he, she, we, ye, and who.

I is used by a speaker to denote himself, and is called the first person of the singular number.

When a speaker includes others with himself, he uses we—This is the first person of the plural number.

Thou and you represent the person addressed—thou in solemn discourse, and you, in common language.* Those are the second person. In the plural, ye is used in solemn style and you in familiar language.

* As you was originally in the plural number, grammarians insist that it must still be restricted to that number. But national usage rejects the arbitrary principle. The true principle, on which all language is built, rejects it. What fundamental rule have we to dispose of words, but this, that when a word signifies one, or unity, it belongs to the singular number! If a word, once exclusively plural, becomes, by universal use, the sign of individuality, it must take its place in the singular number. That this is the fact with you, is proved by national usage. To assign the substitute to its verb, is to invert the order of things. The verb must follow its nominative—if that denotes unity, so does the verb.

"When you was at Athens you attended the schools of the philosophers." Cicero Tusc. Quest. Trans. b. 2.

"On that happy day when you was given to the world." Dodd's Massillon Serm. 1.

"Unless you war ill." Boswell's Life of J. H. 68.

"You was on the spot where your enemy was found killed." Guthrie's Quintilian. b. 2.

"You was in hopes to have succeeded to the inheritance." Ibid. b. 5.

"When you was here comforting me." Pope Let.

"I am as well as when you was here." Gay's Let. to Swift.

"Why was you glad?" Boswell's Life of Johnson.
He represents the name of a male, and she, that of a female, who is the subject of discourse, but not directly addressed. These are called the third person.

It is a substitute for the name of any thing of the neuter gender in the third person, and for a sentence.

They is a substitute for the names of persons or things, and forms the third person of the plural number.

Who is also a personal substitute, used to introduce a new clause or affirmation into a sentence, which clause has an immediate dependence on the preceding one; so that who is a connective, as well as a substitute, and may be called a connective substitute. Who is also used to ask questions, and hence is called an interrogative.

Which is also a connective substitute, but is of neuter gender. It is also interrogative.

These substitutes have two cases; the nominative which precedes a verb, and the objective which follows it. They are inflected in the following manner.

<table>
<thead>
<tr>
<th>Sing.</th>
<th>Plu.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nominative</td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td></td>
</tr>
</tbody>
</table>

These writers did not commit mistakes in the use of the verb after you—they wrote the language as established by national usage—the foundation of all language. So is the practice in the United States—not merely popular usage, tho this, when general, is respectable authority; but the practice of men of letters.

"Where was you standing during the transaction?"

"How far was you from the defendant?" Judge Parker. Trial of Selfridge. p. 58.

"Was you acquainted with the defendant at College?" Mr. Dexter. Ibm. p. 60.

"Was you there when the pistol was fired?" Mr. Gore. Ibm. 65.

"Was you in the Office?" At. Gen. Ibm. 68.

*Who is called a relative, because it relates to an antecedent. But this is also true of he, she, they and most of the substitutes. They all relate to the words which they represent.

† Me is also used in the nominative, in popular practice—it is me. This
NOTE....Mine, thine, his, hers, yours, and theirs, are usually considered as the possessive case. But the three first are either attributes and used with nouns, or they are substitutes. The three last are always substitutes, used in the place of names which are understood, as may be seen in the note below.

Its and whose have a better claim to be considered as a possessive case; but as they equally well fall under the denomination of attributes, I have, for the sake of uniformity, assigned them a place with that part of speech.

But it must be observed, that although it and who are real substitutes, never united to names, like attributes—it day—who man; yet its and whose cannot be used detached from a name expressed or implied—as, its shape, its figure—whose face—whose works—whose are they—that is, whose works. These are therefore real attributes.

This is condemned as bad English; but in reality is an original idiom of the language, received from the primitive Celtic inhabitants of England and France, in whose language mi was the nominative case of the first personal pronoun. The French language retains the same word, from the same original, in the phrase c'est moi.

* Eum in Latin was, by the early Romans, written im, which orthography exhibits the identity of the words.

† That mine, thine, his, hers, yours, and theirs, do not constitute a possessive case, is demonstrable; for they are constantly used as the nominatives to verbs and as the objectives after verbs and prepositions, as in the following passages. "Whether it could perform its operations of thinking and memory out of a body organized as ours is?"—Locke, b. 2. 27. "In referring our ideas to those of other men, called by the same name, ours may be false." "It is for no other reason but that his agrees not with our ideas."—ibm. ch. 32. 9 and 10.

"You may imagin what kind of faith theirs was. Bacon. Unity in Religion.

"He ran headlong into his own ruin, whilst he endeavored to precipitate ours." Bolingbroke. Let. to Windham.

"The reason is, that his subject is generally things; theirs, on the contrary, is persons." Camp. Rhet. b. 1. ch. 10.
A PHILOSOPHICAL AND

"Yours of the 26th Oct. I have received, as I have always done yours, with no little satisfaction."—Wyckie to Pope.

"Therefore leave your forests of beards for ours of brutes, called men." Ibom.

"These return so much better out of your hands, than they went from mine." Ibom.

"Your letter of the 29th of this month, like the rest of yours—tells me with so much more wit, sense and kindness than mine can express," &c. Ibom.

"Having good works enough of your own besides to ensure yours and their immortality." Ibom.

"The omission of repetitions is but one, and the easiest part of yours and of my design." Pope to Wycherley.

"My sword and yours are kin." Shakespeare.

It is needless to multiply proofs. We observe these pretended possessives uniformly used as nominatives or objectives. To say that, in these passages, ours, yours, theirs, and mine, form a possessive case, is to make the possessive perform the office of a nominative case to verbs, and an objective case after verbs and prepositions—a manifest solecism.

Should it be said that a noun is understood; I reply, this cannot be true, in regard to the grammatical construction; for supply the noun for which the word is a substitute, and the substitute is dissolved into an attribute of correspondent sense. "Yours of the 26th of October," becomes a letter—"he endeavored to precipitate ours," becomes our ruin. This shows that the words are real substitutes, like others, where it stands for other men or things.

Besides, in three passages just quoted, the word yours is joined by a connective to a name in the same case; "to ensure yours and their immortality." "The easiest part of yours and of my design." "My sword and yours are kin." Will any person pretend that the connective here joins different cases?

Another consideration is equally decisive of this question. If yours, ours, &c. are real possessives, then the same word admits of two different signs of the case; for we say correctly, "an acquaintance of yours, ours, or theirs"—of being the sign of the possessive; but if the words in themselves are possessives, then there must be two signs of the same case, which is absurd.

Compare these words with a name in the possessive case—"My house is on a hill; my father's is on a plain." Here father's is a real possessive case; the word house being understood; and the addition of the noun makes no alteration in the word father's; "my father's is," or "my father's house is."

* This case does not compare with that of names. We say a "soldier of the king's"—or a soldier of the king's soldiers—but we cannot say, an acquaintance of your's acquaintance.
In the use of substitutes, it is to be remarked, that I, thou, you, ye and we are generally employed, without an antecedent name. When I, and the name of the person are both employed, as they are in formal writings, oaths and the like, the substitute precedes the name; as “I, Richard Roe, of Boston.” In similar language, you and we also precede the name; as “You, John Doe, of New-York.” “We, Richard Roe and John Doe, of Philadelphia.”

You is used by writers very indefinitely, as a substitute for any person who may read the work—the mind of the writer imagining a person addressed.

He and they are used in the same indefinite manner; as “He seldom lives frugally, who lives by chance.” “Blessed are they that mourn, for they shall be comforted.”

He and they, in such sentences, represent any persons who fall within the subsequent description.

Who and whom are always substitutes for persons, and never for things or brutes. Whose is equally applicable to persons as to things.*

* “Whose is rather the poetical, than the regular genitive of which.” Johnson. Lowth also condemns the use of whose, in the neuter gender, as the most respectable authorities for this use—Dryden, Milton and Addison. “The question whose solution I require”—“the tree whose mortal taste”—But these critics seem not to have penetrated to the bottom of this usage.

The truth is, who and its inflections are a part of the primitive language. The Latin qui, cui, quin, quae, are the English who, whom and what—cujus is whose. The Scots formerly wrote quha, quhat, the Saxons, bra.—The Germans still use wer, wessen, wem; the Dutch, wie, wiens, wien. In a fragment of the Laws of Numa, cujus is spelt quois—We have this word in whose. From the time of Numa, at least, this genitive has been of all genders, and I believe, remains so, in all branches of the Teutonic. It is better classed with adjectives or attributes, like his.

Since the foregoing note was written, I find this substitute in the Celtic—the oldest language in Europe—In the Gael or Erse, the nominative is co, cia, ciod—pronounced ko or quo—his, kind—qui, qux, quod. It is certain also that this word is the Greek article o, pronounced with an aspirate. It had its origin in the Hebrew eua. This word furnishes an additional reason for classing the articles and pronouns together: for what in one language is called an article, in another is called a pronoun.
Whoever is often employed as the nominative to two verbs; as "Whoever expects to find in the scriptures a specific direction for every moral doubt that arises, looks for more than he will meet with." Paley, Phil. ch. 4.

Mine, thine and his are equally well used as substitutes, or as attributes. "The silver is mine, and the gold is mine." Hag. 2. 8. "The day is thine, the night also is thine." Ps. 74. 16. "The lord knoweth them that are his." 2 Tim. 2. 19. In these examples the words, mine, thine, his, may be considered as substitutes—"The silver is mine," that is, my silver.

In this character the words usually follow the verb; but when emphatical, they may precede it; as "His will I be." 2 Sam. 16. 18. "Thine, O Lord, is the greatness, the power and the glory." "Thine is the kingdom." 2 Ch. 29. 11.*

These words are also used as attributes of possession; as "Let not mine enemies triumph." "So let thine enemies perish." "And Abram removed his tent." Mine and thine are however not thus used in familiar language; but in solemn and elevated style, they are still used as attributes.

"Mine eyes beheld the messenger divine." Lusiad. B. 2.

* In addition to the proofs already alleged, that these words are not a possessive case, according to the usual acceptation of the word, we may remark, that mine, thine and his, in the passages used in the text, do not stand in the place of of me, of thee, of him. The silver is of me, the gold is of me, the day is of thee, the Lord knoweth them that are of him, do not convey the same ideas, as the present form of expression. Of, in these expressions, would rather imply proceeding from.

Besides, the same words admit of the sign of the possessive; as, "And the man of thine, whom I shall not cut off from mine altar." 1 Sam. 2. 33. "Sing to the Lord, all ye saints of his." Ps. 30. 4. "He that heareth these sayings of mine." Matt. 7. When we say "a soldier of the king's," we mean one of the king's soldiers; and in the passage here cited from Samuel, "the man of thine," has a like sense—"the man of thy men," that is, any one of them. But in the passages from Psalms and Matthew, the words, "all ye saints of his," "these sayings of mine," are evidently meant to include the whole number. It is therefore impossible to resolve these passages, without considering mine, thine, and his as substitutes, in the same case, as the nouns would be, which they represent.
There is another class of substitutes, which supply the place of names, attributes, sentences or parts of a sentence.

*It.*

In the following sentence, *it* is the substitute for a name. "The sun rules the day; *it* illumines the earth;" here *it* is used for *sun*, to prevent a repetition of the word.

In the following passage, *it* has a different use. "The Jews, *it* is well known, were at this time under the dominion of the Romans." Porteus, Lect. 8. Here *it* represents the whole of the sentence, except the clause in which it stands. To understand this, let the order of the words be varied. "The Jews were at this time under the dominion of the Romans, *it* [all that] is well known.

"*It* is a testimony as glorious to his memory, as *it* is singular, and almost unexampled in his circumstances, *that* he loved the Jewish nation, *and* that he gave a very decisive proof of *it*, by building them a synagogue." ibm.

To discover what is represented by the first *it*, we must inquire, what is a glorious testimony? Why clearly, that he loved the Jewish nation, and gave them a decisive proof of *it*, by building them a synagogue. *It* then is a substitute for those clauses of the sentence. The second *it*, refers to the same clauses. In the latter part of the sentence, he gave a magnificent proof of *it*—of what? of what is related in a preceding clause—*He loved the Jewish nation*—of *that* he gave a decisive and magnificent proof. Here *it* represents that member of the sentence.

"As for the pulling of them down, if the affairs require it." Bacon on Ambition. Require what? "The pulling of them down"—for which part of the sentence, *it* is a substitute.

"Shall worldly glory, impotent and vain,
That fluctuates like the billows of the main;
Shall this with more respect thy bosom move
Than zeal for crowns that never fade above?
Avert *it* heaven." Hoole's Tasso, 6. 5.

Avert what? All that is expressed in the four preceding lines, for all which, *it* is a substitute.
"And how could he do this so effectually, as by performing works, which it utterly exceeded all the strength and ability of men to accomplish." Porteus. Lect. 5.

What utterly exceeded? To what does it refer? Let us invert the order of the words—"as by performing works to accomplish which exceeded all the strength of men." Here we find to accomplish, a verb in the infinitive, is the nominative to exceeded, and for that verb, it is a substitute.

This inceptive use of it forms a remarkable idiom of our language, and deserves more particular illustration. It stands as the substitute for a subsequent member or clause of a sentence; and is a sort of pioneer to smooth the way for the verb. Thus "It is remarkable, that, the philosopher Seneca makes use of the same argument." Porteus. Lect. 6. If we ask, what is remarkable? The answer must be, the fact stated in the last clause of the sentence. That this is the real construction, appears from a transposition of the clauses "The philosopher Seneca makes use of the same argument, that is remarkable." In this order, we observe the true use of that, which is also a substitute for the preceding clause of the sentence, and it becomes redundant. The use then of the inceptive it appears to be to enable us to begin a sentence without placing a verb as the introductory word; and by the use of it and that as substitutes for subsequent members of the sentence, the order is inverted without occasioning obscurity.

It is to be noticed also that this neuter substitute, it is equally proper to begin sentences, when the name of a person is afterwards used; as "It was John who exhibited such powers of eloquence." But if we transpose the words, and place who or that, the substitute which begins the new clause, next after the inceptive word, we must use as for the inceptive—"He, who exhibited such powers of eloquence, was John."

In interrogative sentences, the order of words is changed, and it follows the verb. Who is it that has been thus eloquent?

There is a sentence in Locke, in which the inceptive, it, is omitted "Whereby comes to pass, that, as long as any uneasiness remains in the mind. B. 2, ch. 21. In strictness, this is not a defective sentence, for that may be con-
sidered as the nominative to comes. Whereby that comes to pass which follows. Or the whole subsequent sentence may be considered as the nominative—for all that comes to pass. But the use of the inceptive it is so fully established as the true idiom of the language, that its omission is not to be vindicated.

This and that, these and those.

This and that are either definitive attributes, or substitutes. As attributes, they are used to specify individuals, and distinguish them from others; as, "This my son was dead and is alive again." "Certainly this was a righteous man." "The end of that man is peace," "Wo to that man by whom the son of man is betrayed." This and that have plurals, these and those.

The general distinction between this and that, is, this denotes an object to be present or near in time or place; that, to be absent. But this distinction is not always observed. In correspondence however with this distinction, when, in discourse, two things are mentioned, this and these refer to the last named, or nearest in the order of construction; that and those to the most distant; as

"Self love and reason to one end aspire,
Pain their aversion, pleasure their desire;
But greedy that [self love] its object would devour,
This [reason] taste the honey and not wound the flower."

Pope.

"Some place the bliss in action, some in ease,
Those call it pleasure, and contentment these. ibm.

The poets sometimes contrast these substitutes in a similar manner, to denote individuals acting or existing in detached parties; or to denote the whole acting in various capacities; as

"Twas war no more, but carnage through the field,
Those lift the sword, and these their bosoms yield."

Hook's Tasso, b. 20.
"Nor less the rest, the intrepid chief remain'd;
These urged by threats, and those by force constrain'd."

There is a peculiarity in the use of that; for when it is an attribute, it is always in the singular number; but as a substitute for persons or things, it is plural as well as singular; and is used for persons as well as things more frequently than any word in the language; as

"I knew a man that had it for a bye word, when he saw men hasten to a conclusion, "Stay a little that we may make an end the sooner.” Bacon of Despatch.

Here that is the representative of man, and it stands for the last clause of the sentence or bye-word.

"Let states that aim at greatness take heed how their nobility and gentlemen multiply too fast. Bacon.

Here that is a substitute for a plural name. So also in the following. "They that are whole need not a physician, but they that are sick.” "They that had eaten were about four thousand”—"they that are in the flesh”—"they that weep”—"bless them that curse you.”

* "That as a relative is often used to prevent the too frequent repetition of who and which." Murray’s Grammar.

This remark, like a considerable part of our grammar rules, is a proof that men can easily imagin reasons to explain what they do not understand. On recurring to ancient writers, it appears that the converse of Murray’s observation is the truth—that who and which as relatives have, in our language, intruded upon the province of the and that. In the Saxon, who was rarely or never used as a relative after an antecedent, but always in the sense of the Latin quisquis, or aliquis, whoever or any one; as “gif hwa eow withstente”—“if any one shall oppose you”—“gif hwa this to breketh” “if (who) any one or whoever breaketh this.” Sax. Ch. 1. 38.

On the other hand, the Saxon that, this and the are constantly used as the relative after antecedents. And this use appears in all our ancient authors. In the present translation of the bible, and in our best writings, that is most commonly used as the relative. This is also the common popular usage. The attempt therefore to repress this use of that, is to attack the fundamental idioms of the language.

The Teutonic that is the same as the Greek τοτα, τουτο, ταυτα, which is of the masculine gender in all cases except the nominative. The radical of these words is probably the Hebrew at, denoting that or the very thing.
Another very common use of *this* and *that*, is, to represent a sentence or part of a sentence; as

"It is seldom known *that*, authority thus acquired is possessed without insolence, or *that*, the master is not forced to confess *that*, he has enslaved himself by some foolish confidence. *Rambler, No. 68.*

In this sentence, the first *that* represents the next member—"Authority thus acquired is possessed without insolence,*that* is seldom known," *it* represents the same clause. The second *that* represents all which follows, including two clauses or members—the third *that* is the substitute for the last clause. In strictness the comma ought always to be placed after *that*; which punctuation would elucidate the use of the substitute and the true construction, but the practice is otherwise—For *that*, in this and like sentences, is either a nominative or an objective. The first *that* in the foregoing sentence is the nominative, coinciding with *it*, or in apposition to it; and when the clauses are transposed, the inceptive *it*, being redundant, is dropped, and *that* becomes the nominative. The same remark is applicable to the second *that*; the verb and first clause, *it is seldom known*, being understood. The third *that* is the objective after *confess*. "The master has enslaved himself by some foolish confidence—he is forced to confess *that*—all *that* is seldom known."

Such is the true construction of sentences—the definitive *that*, instead of being a conjunction, is the representative of a sentence or distinct clause, preceding that clause, and pointing the mind to it, as the subject which follows.—And it is as definitive or demonstrative in this application to sentences, as when it is applied to a name, or noun.

The following sentence will exhibit the true use of *that* as a substitute—"He recited his former calamities; to which *was* now to be added *that* he was the destroyer of the man who had expiated him. *Beloe's Herodotus. Clio. 45.*

According to our present grammars, *that* is a conjunction; if so, the preceding verb *was*, has no nominative word. But the sense is, "to which *was* to be added *that*" which is related in the following words.
The use and importance of this substitute are more clearly manifest, when it denotes purpose or effect; as in this passage—And he came and dwelt in a city called Nazareth; that it might be fulfilled which was spoken by the prophets, “He shall be called a Nazarene.” Matt. 2. 23. Here that is equivalent to that purpose or effect. He came and dwelt in Nazareth, for the purpose expressed in what follows. It and which represent the last clause of the sentence—He shall be called a Nazarene. The excellence and utility of substitutes and abbreviations are strikingly illustrated by this use of that.

This substitute has a similar use in this introductory sentence. That we may proceed—that here refers to the following words. The true construction is, But that we may proceed—but, as will be hereafter shown, denoting supply or something, more or further—So that the literal interpretation of the expression is—More that—or further that, we may proceed. It is the simple mode our ancestors used to express addition to what has preceded, equivalent to the modern phrase. Let us add, or we may add what follows, by way of illustrating or modifying the sense of what has been related.

That, like who and which, has a connecting power, which has given to these words the name of relative; in which character, it involves one member of a sentence within another, by introducing a new verb; as “He, that keepeth his mouth, keepeth his life.” Prov. 13. In this passage, that keepeth his mouth, is a new affirmation, interposed between the first nominative and its verb; but dependent on the antecedent nominative.

“The poor of the flock, that waited upon me, knew that, it was the word of the Lord.” Zech. 11.11. In this passage we have that in both its characters—the first that is a substitute for poor of the flock; the second, for the last clause of the sentence, it was the word of the Lord.

This exposition of the uses of that, enables us to understand the propriety of that that joined in construction.

“Let me also tell you that, that faith, which proceeds from insufficient or bad principles, is but little better than infidelity.” In this passage, the first that is a substitute for the whole subsequent part of the sentence; the second
that is an attribute agreeing with faith—"That faith which proceeds from bad principles is little better than infidelity—let me tell you that." Hence it might be well always to separate the two words by a comma. We now distinguish these words by a stronger emphasis on the last.

"He, whom thou now hast, is not thy husband; in that saidst thou truly." John 4. 18. That is, in that whole declaration.

From these passages and the explanation, we learn that that is a substitute—either for a single word or a sentence; nor has it any other character, except when an attribute.

This is much less frequently a substitute for sentences than that; but is used in this character, as well as in that of an attribute; as "Let no prince measure the danger of discontents by this, whether they be just or unjust; for that were to imagin people to be reasonable, who do often spurn at their own good; nor yet by this, whether the grief whereupon they rise be in fact great or small.

Bacon on Kingdoms.

Here this, in each part of the sentence, is the representative of the clause in Italics succeeding.

"Can we suppose that all the united powers of hell are able to work such astonishing miracles, as were wrought for the confirmation of the christian religion? Can we suppose that they can control the laws of nature at pleasure, and that with an air of sovereignty, and professing themselves the Lords of the universe, as we know Christ did? If we can believe this, then we deny, &c. We observe here, this represents a series of sentences.

In some cases, this represents a few words only in a preceding sentence, as in the following—"The rule laid down is in general certain, that the king only, can convolve a parliament. And this, by the ancient statutes of the realm, he is bound to do, every year or oftener, if need be." Blacks. Comment. B. 1. ch. 2.

If we ask, what is the king bound to do? The answer must be, convolve a parliament; for which words alone this is the substitute, and governed by do.

The plurals these and those, are rarely or never used as substitutes for sentences,
Which.

Which is also a substitute for a sentence, or part of a sentence, as well as for a single word; as "If there can be any other way shown, how men may come to that universal agreement, in the things they do consent in, which I presume may be done." Locke on Und. B. 1. 2.

Which, in this passage, represents all which precedes—which or all that is above related, may be done.

"Another reason that makes me doubt of any innate practical principles, is, that I think there cannot any one moral rule be proposed, whereof a man may not justly demand a reason; which would be perfectly ridiculous and absurd, if they were innate, or so much as self-evident, which every innate principle must needs be."

ibid. Chapt. 3.

In this passage the first which represents the next preceding part of the sentence, a man may justly demand a reason—which power of demanding a reason would be ridiculous—The second which, is a substitute for self-evident, which, that is, self-evident, every innate principle must be.

"Judas declared him innocent, which he could not be, had he, in any respect, deceived the disciples." Porteus. Lect. 22. Here which represents the attribute innocent.

That would equally well represent the same word, with a connective. "Judas declared him innocent, and that he could not be," &c.

"We shall find the reason of it to be the end of language, which being to communicate thoughts"—that is, end of language, and for those words, is which the substitute.

What.

This substitute has several uses. First, it has the sense of that which, as "I have heard what has been alleged."

Secondly—What stands for any indefinite idea, as "He cares not what he says or does." "We shall the better know what to undertake." Locke on Und. 1. 6.
Thirdly—What is an attribute, either in the singular or plural number, and denotes something uncertain or indeterm inate; as "In what character, Butler was admitted into that lady's service, is unknown."

Johnson's Life of Butler.

"It is not material what names are assigned to them."

Camp. Rhet. 1. 1.

"I know not what impressions time may have made upon your person."

Life of Compl. Let. 27.

"To see what are the causes of wrong judgment."

Locke. 2. 21.

Fifthly—What is used by the poets preceding a name, for the or that which, but its place cannot be supplied by these words, without a name between them; as

"What time the sun withdrew his cheerful light,
And sought the sable caverns of the night."

Hoole's Tasso. b. 7.

That is, at the time when or in which.

Fifithly—A principal use of what is to ask questions; as "What will be the consequence of the revolution in France?"

This word has the singular property of containing two cases; that is, it performs the office of a word in the nominative and of another in the objective case; as "I have, in what goes before, been engaged in physical inquiries farther than I intended." Locke. 2. 8. Here what contains the object after in and the nominative to goes.

What is used with a name as an attribute and a substitute; as "It was agreed that what goods were aboard his vessels, should be landed." Mickle's Discovery of India. 89. Here what goods, are equivalent to the goods which; for, what goods include the nominative to two verbs, were and should be landed. This use of the word is not deemed elegant.
As and so.

As is a substitute of as general use as any in the language. It represents either a single word or a sentence; and serves as a nominative or an objective case in both numbers. It is equivalent to who, that, which, or what.*

1. As is a nominative; as "We have been accustomed to repose on its veracity with such humble confidence as suppresses curiosity." *Johnson. Life of Cowley.*

Here as, is a substitute for confidence, and the nominative to suppresses. It is simply such confidence, which suppresses curiosity. The latter substitute was used, in such cases, until a late period—"Of such qualities which are capable of producing simple ideas in us," says *Locke* 2, 23, and grammar-makers have condemned this mode of using which—not knowing that as is precisely its equivalent.

"All the punishment which God is concerned to see inflicted upon sin, is only such as answers the ends of government."

"Do every thing as was said about mercury and sulphur." *Encyclopedia, art. Metallurgy.* That is, do every thing which was said.

2. As is a substitute in the plural number and objective case. "The malcontents made such demands as none but a tyrant could refuse." *Boling. on Hist. Let. 7.* Here as is a substitute for demands, and the object governed by refuse, and like other connective substitutes, preceding its governing verb.

"Many wise men contented themselves with such probable conclusions, as were sufficient for the practical purposes of life." *Enfield. Hist. Phil. 2, 11.*

*To what unaccountable negligence shall we ascribe the utter misconception of the character and uses of this word? A conjunction! When the word is a substitute in the German tongue, and never has had any other use in our own! It is the same word as es in Greek.
Here *as* is a substitute for *conclusions*, and the nominative to *were*.

"From whence might *contest* spring and mutual *rage*,

*As* would the camp in civil broils engage."

Hoole's *Tasso*. 6. 5.

In this passage, *as* represents *contest* and *rage*, and is the nominative to *would engage*. In prose, *such* would precede *contest*.

"The same arguments are applicable, *as* were applied to the theory of uniformity of perceptions." *Ward's Law of Nations*. 1. 98. Here *as* is precisely synonymous with *which*; it refers to *arguments* and is the nominative to *were applied*.

3. *As* is also a substitute for sentences. "We shall find, in treating of the barbaric philosophy, that, *as* might be expected, in the infancy of the world, it *was simple in its nature and office*." Enfield's *Hist. Ph.* 1. 12.

Here *as* represents the last clause of the sentence, *as* will appear, by changing the order. "We shall find that in the infancy of the world, the barbaric philosophy *was simple in its nature and office, as* [which] might be expected."

"On his return to Egypt, *as* I learned from the same authority, he levied a mighty army."

Beloe's *Herod. Uterpe*.

In this sentence, *as* represents the first and last members—"On his return to Egypt, he levied a mighty army—*as* [which or all that] I learned from the same authority.

"As to the three orders of pronouns already mentioned, *they may be called prepositive, as* may indeed, all substantives." *Harris' Hermes*. p. 77.

Here *as* is the substitute for, *be called prepositive, and* is the nominative to *may [be called].* They may be called prepositive, *which* all substantives may be called. At the beginning of the sentence, *as* is equivalent to *that or which*—the phrase being an abbreviation.—To explain *that which* respects the three orders, &c.
"Order and distribution are the life of despatch, so as the distribution be not too subtil."

Bacon of Despatch.

Here as is a substitute for the following member of the sentence, and is synonymous with that. This use of as after so, is condemned by critics, evidently because they have not understood it. Like such which before mentioned, it is correct, and is a true idiom of the language, but now obsolete.

In the foregoing passage from Bacon, we have a Saxon mode of introducing a condition or proviso. So was prim­itively a pronoun relative or substitute, as it is still in the German, the elder sister of our language. It often retains the sense of a substitute in English. So as therefore are equivalent to which that—or that in this manner. We now use a Latin word provided, or on condition. The Saxon mode was very simple. Order and distribution are the life of despatch, so as, [that which follows being this, or being granted] the distribution be not too subtil.

4. As is often a substitute for an adjective or an attribute. "Short as was this proposition of our reasonable demands, and apparent as it must have been, that we could not re­cede from it, it was not accepted." Here as represents the attributes short and apparent, in a manner similar to the use of which for innocent in a passage before cited—Short, which was—apparent, which it must have been—This is the precise original signification of as.

5. As has the sense of that in its definitive or demonstra­tive sense. In this sense, it is often used before and after attributes to ascertain their meaning. Thus we say, "Paris is not as large as London," or not so large as London. In this form of expression, which is one of the most common, so and as are precisely equivalent, and I have just observed that so was originally a substitute. Both of these words are definitives, and synonymous with that—"Paris is not that large that London is," is the precise phrase on primitive principles.

In a like sense, these words precede the infinitive mode or radical verb—"Have every thing in readiness, so as to
march at a moment's warning." The sense is, in that manner or condition that—or to that effect—to march at a moment's warning.

This simplicity of language marks the state of the men who invented it. Illiterate and furnished with few words, our ancestors devised modes of expression corresponding to their degree of knowledge; and we, while we have their language constantly in our mouths, overlook the steps by which it has advanced to its present richness and dignity.

So is denominated an adverb; but originally was an article or pronoun—in the Celtic so, he; in the Gothic, sa, and so, the, an article or demonstrative pronoun, masculine and feminine—in the Saxon, se and seo; in the modern German so, which: In English it retains the same character and use, and is therefore a substitute.

"'Tis true we lost the day, so fate ordained."

We are accustomed to explain so by thus, or in this or that manner. But this is really an error; for men in the early stages of society, do not invent such artificial modes of expression. In the line recited, the meaning of so is that or which.

* "The phrase, as follows, forms an impersonal verb, and therefore it should always be in the singular; as, "the rules are as follows;" similar to the scriptural expression, "As becometh women professing godliness." that is, as it becometh. If we give the sentence a different turn, and instead of as, say such as, the verb is no longer impersonal. The pronoun such is the nominative, whose number is determined by its antecedent." Murray's Grammar.

On this passage, which is an error from beginning to end, I will just remark, that had it been written in the days of Johnson and Lowth, the errors it contains must have been pardoned, like others which distinguished writers have committed. But to frame such an explanation of as follows, after the publication of the "Diversion of Purley," admits of no apology. In the familiar phrase, as follows, as is a substitute [pronoun] with the sense of that or which—it is without inflection; but retains its true primitive sense, and in both numbers. The insertion of it, as it follows, would render the phrase nonsense—which it follows. In the passage from Timothy, the author has cited some old translation. In my bible, the words are "which becometh." But as becometh is a correct phrase, and as common, as which becometh. They mean the same thing, and either of them is an exact translation of a prepos.
We lost a day; that or which fate ordained, or fate ordained that—that being a substitute representing the preceding clause. Thus in the German, so has the same sense, "Die liebe so ich zu ihnen trage"—the love that or which I bear you."

If we examin closely, we shall see that the pretended adverbial sense of so, which is expressed by thus—or in this manner—is nothing more than the definitive sense, that

"As with the people, so with the priest"—is simply which or that with the people, that with the priest. That is, the condition of the one is precisely the same as of the other. The modern idea is an artificial one, deduced by inference from the precision of the definitive.

"And as thy days, so shall thy strength be." "As my strength was then, even so is my strength now." That is, what thy days, that shall thy strength be—What my strength was then, even that is my strength now. These examples are sufficient to show the force of these definitives; and how flat and feeble the sentences become, when as and so are translated into thus and this manner!

"And God spake unto Moses—Say unto the children of Israel, I am the Lord, and I will bring you," &c. And Moses spake so unto the children of Israel." Ex. 6. Here so is a substitute for all which Moses was commanded to say—that is, for several verses preceding. The command was, say unto the children of Israel what follows—And Moses spake so; that is he spake that, which had been commanded him. But explain so, by thus, in that manner, not only the force, but the strict propriety of the expression, is abandoned. In strictness, so, is a substitute in the objective case after spake. This criticism is applicable to innumerable passages in scripture, as well as in every profane author.

In the phrase, "if so be," so is the nominative to be; "if that be." Matt. 18. 16. Hosea 8. 1.

"The conclusion is said to be probable, and more or less so, according to the proportion," &c. Campbell's Rhet. ch. 5. Here so is a substitute for probable.

"And he was astonished at the draught of fishes—and so was also James and John." Luke 5. 10. Here so is a substitute for astonished. It is needless to multiply examples. Any person of observation may, as he reads, find and apply
the definition of so and as. However deflected from the primitive sense these words may appear to be, a close inspection will enable us to discover, in all cases, a near alliance of their signification to the definitive use here explained.

"The tenth part of her riches, whoever pleases may ascertain, and they will not be found so great as has been represented." Beloe's Herodotus. Euterpe. 155.

Here as is a substitute for great, and is the nominative to has—and so has its original sense of that—"They will not be found that great which has been represented." This is the precise signification of so and as. In many cases, we observe so that used together, noting end or effect. This duplication of words of the same import may be ascribed to the poverty of the language in early ages, or the words may have been used in senses somewhat different. It is however remarkable that the Saxons repeated the same word, so, to express what the Latins expressed by sicut, and we express by so that. "Swa swa ic habbe." So so I have; or as we now say, so as or that I have. "Ac eal swa eal hit ys on than gewrite." And all so so it is in that writing. Saxon Chronicle, p. 67.

We also unite all and so, in also—in Saxon eal eal, "eal swa his faeder Athewulf hine thider sende and baed." ft. 77. "All as his father Athewulf had sent him and asked." The sense of also is now precisely the same. "For where your treasure is, there will your heart be also." That is, all that, which is equivalent to, in the same manner or degree,

* In the Gothic and Saxon, the pronoun and the adverb were written differently—the pronoun in Gothic was so or sa—and the adverb, swa—in Saxon, the adverb was written in the same manner, and the pronoun se masculine, and se feminine. These words in the Saxon grammars of Hickes and Lye, are given as the masculine and feminine genders of the article that. In the German, as in English, they are now blended in orthography. It is probable that they all sprung from one radical word, for in these Saxon words, swa swa swa—the adverbial orthography is given, yet the English is whose or whoever—or literally, so who so—he who that—quinque; in which Latin word, the pronoun is also repeated.
or to the full effect. We now use likewise, for the same purpose, and in origin and effect, this word differs little from also.

Such are the ingenious devices of men to express their ideas, during the imperfection of language, in the early stages of society.

Thus is a word of like import with so. "Thus saith the Lord"—"if they say thus." And it deserves notice, that as the English and Germans prefix all to so, in also; the Dutch prefix all to thus in a like sense, aldus, that is, all thus. Thus was originally a definitive. So, when used with verbs and attributes, is really a definitive with the like force and effect as in other cases. "So shall ye perish,"—"so foolish was I." "In that way ye shall perish" that foolish, or in that degree foolish was I, is the true sense of so, in these phrases. Notwithstanding the true origin of this word, it may in many cases be classed with adverbs, or modifiers, in conformity to the usual practice.

Both.

Both is an attribute of number, but it is a substitute also for names, sentences, parts of sentences, and for attributes.

"Abraham took sheep and oxen, and gave them unto Abimelech, and both of them made a covenant." 

Genesis 21. 27.

Here both is the representative of Abraham and Abimelech.

"If the blind lead the blind, both shall fall into the ditch." 

Matt. 15. 14.

"A certain creditor had two debtors—and when they had nothing to pay, he frankly forgave them both." 

"He will not bear the loss of his rank, because he can bear the loss of his estate; but he will bear both, because he is prepared for both." 

Boyle on Exile.
In the last example, *both* represents the parts of the sentence in Italics.

When it represents two attributes, it may and usually does precede them; as "He endeavored to render commerce *both* disadvantageous and infamous." *Mickle, ft. 159.*

As an attribute, it has a like position before names; as "Tousa confessed he had saved *both* his life and his honor." *ibid. 160.*

"It is *both* more accurate, and proves no inconsiderable aid to the right understanding of things, to discriminate by different signs such as are truly different." *Campbell's Rhet. 1. 33.*

In this passage, *both* represents *more accurate,* and the following member of the sentence; but the construction is harsh.

"The necessity which a speaker is under, of suiting himself to his audience, *both that,* he may be understood by them, and *that,* his words may have an influence upon them." *Camp. Rhet. ch. 10.*

Here *both* represents the two following clauses of the sentence.—The definitive *the* is placed between *both* and its noun; as "To *both* the preceding kinds, the term *burslage* is applied." *Camp. Rhet. 1. 2.*

**Same.**

The attribute *same* is often used as a substitute for persons and sentences or parts of a sentence; as "Nothing appears so clearly an object of the mind or intellect only; as the *future days,* since we can find no place for its existence any where else. Not but the *same,* if we consider, is equally true of the *past.*" *Hermes. ft. 112.*

In this ill constructed sentence, [for in opposition to Lowth's opinion, I consider Harris as a most inelegant writer] *same* has reference to all which is predicated of the
future tense—that is, that it is an object of intellect only,
since we can find no place for its existence anywhere else—
The same, all this, is true of the past also.

"For brave and generous ever are the same."

_Lusiad._ 1.

**Many, few, all, any.**

These words we often find used as substitutes for names;
"For many shall come in my name, saying, I am Christ,
and shall deceive many." _Math._ 24. 5. "Many are
called, but few chosen." 20. 16. "All that come into the tent, and all that is in the tent shall be unclean seven
days." _Num._ 19. 14. "If a soul shall sin against any of
the commandments." _Lev._ 4. 2. "Neither is there any,
that can deliver out of my hand" _Deut._ 32. 39.

_First, last, former, latter, less, least, more, most,
are often used as substitutes.

"The victor’s laurel, as the martyr’s crown,
The first I hope, nor less the last I prize."
_Hook’s Tasso._ 6. 8.

"The last shall be first, and the first last."
_Matth._ 20. 16.

"It will not be amiss to inquire into the cause of this
strange phenomenon; that, even a man of discernment
should write without meaning, and not be sensible that he
hath no meaning; and that judicious people should read
what hath been written in this way, and not discover the de­
fect. Both are surprising, but the first much more than
the last." _Camp. Rhet._ 2. 7.

Here both represents the two clauses of the sentence,
preceded by that—both of those propositions are surprising.
First and last stand in the place of the same clauses.
"Sublimity and vehemence are often confounded, the latter being considered as a species of the former.

Camp. Rhet. 1. 1.

Here latter and former are used for names which are near in construction, and no obscurity is occasioned by the substitutes. But these words, when placed far from the words which they represent, obscure the sense, and compel the reader to peruse a sentence the second time, which is always a fault in style. For example; "As to the Etolian, it is frequently confounded with the Doric; and as this union takes place also in other essential points, it is only between the Dorians and Ionians that a kind of parallel can be drawn. This I shall not undertake to perform; I shall only make one general observation; the manners of the former have ever been severe, and the characteristics of their architecture, language and poetry, are grandeur and simplicity. The latter more early made a progress in refinement." Anarch. ch. 72.

In every case, where the antecedent word or sentence is not obvious, so that the mind instantly applies the substitute to its principal, the use of a substitute is a fault. For example, "When a speaker addresseth himself to the understanding, he proposes the instruction of his hearers, and that by explaining some doctrine unknown or not distinctly comprehended by them, or by proving some position disbelieved or doubted by them. In other words, he proposes to dispel ignorance or to vanquish error. In the one, his aim is their information; in the other their conviction. Accordingly, the predominant quality of the former, is perspicuity; of the latter, argument. By that, we are made to know; by this, to believe."

Camp. Rhet. 6. 1. ch. 1.

To what antecedent words or clauses, do all these substitutes refer? In the one—and the other what? Doubtless, the antecedents must be the two parts of the sentences, beginning with, by explaining and by proving. That is, in explaining an unknown doctrine, his aim is instruction—in proving a doubted point, his aim is conviction. The predominant quality of the former—former what?
tionably the same sentences are the antecedents to the former and latter. These words cannot refer to information and conviction; for although perspicuity may be predicated of information, yet it cannot be a predominant quality of it; and argument cannot be predicated of conviction. But the whole passage is perplexed and obscure.*

"Leonis refused to go thither with less than the appointed equipment." Mickle, 1. 181. Here less supplies the place of equipment, and prevents the necessity of its repetition.

"To the relief of these, Noronha sent some supplies, but while he was preparing to send more, an order from Portugal arrived." Mickle, 1. 180.

Here more is sufficiently intelligible without a repetition of the name—supplies.

"And the children of Israel did so, and gathered some, more, some less." Exod. 16. 17.

"I cannot go beyond the word of the Lord, my God, to do less or more." Num. 22. 18.

"Then began he to upbraid the cities wherein most of his mighty works were done." Matt. 11. 20.

"Was not this love indeed? We men say more, swear more, but indeed Our shews are more than will." Shakes. Twelfth Night.

Such.

"Jubal was the father of such as dwell in tents." Gen. 4.

"Thou shalt provide able men, such as fear God." Ex. 18.

* This criticism is the more necessary, as the use of former and latter in our best writers, is indulged to a fault. There are few places in which it is not better to repeat the antecedents than to use them. The injudicious use of these and other substitutes is a great blemish in Campbell's Philosophy of Rhetoric.
PRACTICAL GRAMMAR.

"Objects of importance must be portrayed by objects of importance; such as have grace, by things graceful."

Camp. Rhet. 1. 2.

Such here supplies the place of a name or noun, but it retains its attributive sense and the name may be added.

Self and own.

Self is said to have been originally an attribute; but is now used as an intensive word to give emphasis to substitutes and attributes. Sometimes it is used as a noun. In the plural, it forms selves. It is added to the attributes my, your, own; as myself, yourself, ourselves; and to him, her, them, as himself, herself, themselves. And the annexed to substitutes in the objective case, these words are indifferently in the nominative or objective. Self is never added to his, their, mine, or thine.

The compounds himself, herself, thyself, ourselves, themselves, may be placed immediately after the personal substitute, as he himself wrote a letter to the minister; or immediately after the following verb or its object; as "He wrote a letter himself"—"he went himself to the admiralty." In such phrases himself not only gives emphasis to the affirmation; but gives to an implied negative, the force

* Self has the force of the Latin ipse, and was in Saxon, added to all cases, he-self, his-self, him-self. So in Latin tu te ipse, was used in the nominative.

† In this compound, we have a strong confirmation of what I have alleged respecting the arrangement of you in the singular number, when used of a single person. Self is invariably in the singular—selves in the plural. Now if you is to be classed with plurals in all cases, we must, to be consistent, apply yourselves to a single person. Yet we make the proper distinction—you yourself is applied to one person—yourselves to more. But upon the principle of our grammars, that you must always be joined to a verb in the plural, we are under the necessity of saying "You yourself were," when we address a single person—which is false construction. Whatever verb therefore is used with you when applied to an individual, must be considered as a verb in the singular number.
of one expressed. "He went himself to the minister," carries with it a direct negation that another person went. In negative sentences, it has a different effect. "He did not write the letter himself," implies strongly that he wrote it by an agent, or had an agency in procuring it to be written.

These compound substitutes are used after verbs when reciprocal action is expressed; as "They injure themselves."

*Itself* is added to names for emphasis; as "this is the book *itself*.

*Own* is an attribute denoting property, used with names to render the sense emphatical; as "this book is my *own*.

*Own* is sometimes a substitute; as "He came unto his *own* and his *own* received him not." *John 1. 11.*

"This is an invention of his *own*.

One, other, another, none.

The attribute *one* is very often a substitute—*other* is used in the same manner, and often opposed to *one*. "All rational or deductive evidence is derived from *one* or the *other* of these two sources." *Camps. Rhet. ch. 5.* To render these words more definite, and the specification of the alternatives more explicit, the definitive *the* is placed before them—"as either he will hate *the one* and love *the other*.

*Another* has sometimes a possessive case; as "the horse is another's," but this form of speech is but little used.

*Another* is the Saxon *an*, one, and *other*—*one other*. It is an attribute; but often used as a substitute. "Let another praise thee and not thine own mouth." *Prov. 27. 2.*

*None* is a contraction of *no one*, or rather of the Saxon *na an*, and is often a substitute; as "Ye shall lie down and *none* shall make you afraid." *Lev. 26. 6.* It is used in the plural as well as the singular number.

The cardinal numbers are all used as substitutes, when the things to which they refer are understood by the train
of discourse, and no ambiguity is created by the omission of the name; as "The rest of the people also cast lots, to bring one of ten to dwell in Jerusalem." Neh. 11. 1.

One has sometimes the possessive form; "One's person is to be protected by law;" and frequently the plural number; as "I have commanded my sanctified ones, and I have called my mighty ones. Isa. 13. 3.

One, when contrasted with other, sometimes represents plural names, and is joined with a plural verb, as in this passage; "The reason why the one are ordinarily taken for real qualities, and the other, only for bare powers, seems to be," &c. Locke. b. 2. ch. 6. 25.

One and another, have a peculiar distributive use in the following and the like expressions; "Brethren, let us love one another." The effect of these words seems to be, to separate an act affirmed of a number collectively, and distribute it among the several individuals—"Let us love—let each one love the other." "If ye have love one to another"—"by love serve one another." One another in this phraseology, have the comprehensive sense of every one. "By love serve"—every one serve the other. Each is used in a like sense—They loved each other—that is—they loved—each loved the other.

Several.

Several is an attribute, denoting originally one thing severed from others. But this sense seems to be now confined to technical law language; as a "joint and several estate." In common use, it is always plural, expressive of an indefinite number, not very large. It is frequently a substitute; as "Several of my unknown correspondents." Spectator. 281.
The attribute *some* is often used as a substitute; as "*Some* talk of subjects they do not understand; others praise virtue who do not practice it." *Johnson.*

*Each, every, either, neither.*

*Each* is a distributive attribute, used to denote every individual of a number, separately considered; as "The king of Israel and the king of Judah sat *each* on his throne." "Thou also and Aaron, take *each* of you his censer." "The **four** beasts had *each* of them six wings."

In these passages, *each* is a substitute for the name of the two persons, one separate from the other.*

*Every* denotes all the individuals of a number considered separately; it is therefore a distributive attribute, but sometimes a substitute, chiefly in the law style; as "*Every* of the clauses and conditions." It is generally followed by the name to which it belongs, or by the cardinal number *one.*

We sometimes see *every* separated from its name by the definitive *the* and an attribute of the superlative degree; as "*Every* the least variation." *Locke.*

*Either* and *neither* are usually classed with the conjunctions; but in strictness, they are always attributes or substitutes. Their corollatives *or* and *nor,* tho considered as conjunctions, belong to the latter class of words—or being merely an abbreviation of *other,* and *nor* being the same word with the Saxon negative prefixed *ne-othcr,* as will be hereafter shown.

*Each* is often applied to two only, but its original sense in the Celtic and Saxon, and its present sense is *every one of any number individually considered.* "*Hwæt* outhle hu mycel sce menn hæfde the land-sittende wæs innan Engla-lande." What or how much *each* man had that was resident in England. *Saxon Chron.* 189.
Either and or denote an alternative; as "I will take either road at your pleasure." That is, I will take one road or the other. In this use, either is an attribute.

Either is also a substitute for a name; as "Either of the roads is good." It also represents a sentence or a clause of a sentence; as "No man can serve two masters, for either, he will hate the one and love the other, or else," &c. Mat. 6. 24. To understand the true import of either, let or be also reduced back to its original orthography, "for either, he will hate the one and love the other; other else he will hold to the one and despise the other." Here we are presented with the sentence as it would have stood in the Saxon; and we see two distinct affirmations, to the first of which is prefixed either, and to the last other. These words then are substitutes for the following sentences, when they are intended to be alternative. Either and or are therefore signs of an alternative, and may be called alternatives.

Either is used also for each; as "Two thieves were crucified—on either side one." This use of the word is constantly condemned by critics, and as constantly repeated by good writers; but it was the true original sense of the word, as appears by every Saxon author.

Either is used also to represent an alternative of attributes; as "the emotion must be either, not violent or not durable." Camp. Rhet. 1. 2.

Neither is not either, from the Saxon ne-either; and nor is ne-other, not other. As either and or present an alternative or a choice of two things; so neither and nor deny both or the whole of any number of particulars; as "Fight neither with small nor great." 1 Kings. 22. 31. Which sentence when resolved stands thus; "Fight not either with small, not other, with great." Such is the curious machinery of language!

Neither is also used as an attribute and as a substitute for a name; as "Neither office is filled, but neither of the offices will suit the candidate."

* As in English or is a mere contraction of other; so in Latin, aut is a contraction of alter; and what is equally observable, both are the same word, or from the same radical. After, with the a broad, and unsuppressed, is the Saxon after or outher,
A PHILOSOPHICAL AND

NOTE. Or, either, nor and neither are here explained in their true original character; but when they stand for sentences, it is more natural to consider them as connectives, under which head I have arranged them.

In general, any attribute [adjective] which describes persons or things with sufficient clearness, without the name to which it strictly belongs, may be used as a substitute; as "The rich have many friends"—"Associate with the wise and good"—"The future will resemble the past"—"Such is the opinion of the learned."

Hereby, thereby and whereby.

In these words and some others formed in like manner, the substitute has the preposition annexed to it, forming a part of the word. Here, there and where, in these compounds are not adverbs, as commonly supposed, but substitutes or pronouns; and the practice of annexing the preposition to them in hereby, thereto, whereof, &c. is of Saxon origin.

"Gif hit sy her inne; gif hit sy east inne; gif hit sy north inne—If it shall be here in—if it shall be east in—if it shall be north in—that is, in this part of the country—in the east or in the north. L. L. Edw. Conf. 8.

Here is not given as a noun or pronoun in the Saxon Dictionaries; but was certainly one or the other, originally, like the Latin hic. But there and where stand in the character of substitutes. There is the Saxon pronoun thaer, he, this or that used in all genders—Where is the Gothic relative or substitute, wharga, written also whargis and whargo, who, what or which. Thereby, whereof, hereto, are literally by that—of which—to this, in an inverted order.

It has been customary to ridicule this class of words as barbarous and inelegant. But nothing is more common than for men to affect contempt for what they do not understand. Contempt of antiquity is generally the offspring of ignorance, and perhaps always so in language. The words here explained are peculiar in their form, but composed of genuine English words, legitimate, and at times, indispensable.
Attributes or adjectives.

The attributes of things are their qualities, the properties which belong to them, or which are ascribed to them, and cannot exist in the abstract. In grammar, the words which express these qualities are usually called adjectives, but they may, with much more propriety, be denominated Attributes or Attributives; as expressing whatever belongs to or is attributed to things.

Attributes then in grammar are words which denote the qualities inherent in or ascribed to things; as, a bright sun; a splendid equipage; a miserable hut; a magnificent house; an honest man; an amiable woman; liberal charity; false honor; a quiet conscience.

As qualities may exist in various degrees, which may be compared with each other, suitable modes of speech are devised to express these comparative degrees. In English, most attributes admit of three degrees of comparison, and a few admit of four. There are therefore four degrees of comparison.

The first denotes a slight degree of the quality, and is expressed by the termination ish; as reddish, brownish, yellowish. This may be denominated the imperfect degree of the attribute.

The second denotes such a degree of the attribute as to constitute an absolute or distinct quality; as red, brown, great, small, brave, wise. This is called the positive degree.

The third denotes a greater or less degree of a quality, than exists in another object, with which it is compared; as, greater, smaller, braver, wiser. This is called the comparative degree.

The fourth denotes the utmost or least degree of a quality; as, bravest, wisest, poorest, smallest. This is called the superlative degree.

The imperfect degree is formed by adding ish to an attribute; as yellow, yellowish. If the attribute ends in e, this vowel is omitted; as white, whitish.
The comparative degree is formed by adding r to attributes ending with e; as wise, wiser—and by adding er to words ending with a consonant; as cold, colder—or by prefixing more or less; as more just, less noble.

The superlative degree is formed by adding st to attributes ending with e; as wise, wisest—and est to those which end with a consonant; as cold, coldest—or by prefixing most and least; as most brave, least charitable.

Every attribute susceptible of comparison, may be compared by more and most, less and least.*

All monosyllables admit of er and est, and dissyllables when the addition may be easily pronounced; as happy, happier, happiest; lofty, loftier, loftiest. But few words of more syllables than one will admit of er and est. Hence most attributes of more syllables than one are compared by more and most, less and least; as more fallible, most upright, less generous, least splendid.

* In all our grammars, we find more and most, less, least, and very, when prefixed to attributes, denominated adverbs. If we urge that the adverbs of most and very, are mostly and verily, we are told, that most and very, are used adverbially, and are therefore to be classed with adverbs. Such are the mistakes of false names and false theory! Had our critics never learnt the grammar of any language but our own, they never would have formed such a distinction; for nothing can be more groundless. The words under consideration, wherever placed, whether before nouns, adjectives, or adverbs, have but one use only—which is, to qualify the sense of the words to which they are prefixed. Before nouns they denote an increase or diminution of the thing expressed: as more men, less honesty. Before attributes, they mark an increase or diminution of the quality; as more brave, less pollute. Before adverbs or modifiers, they denote an increase or diminution of the degree or manner expressed by the words; as more surely, most generously; less bravely, less viciously. Thus these words have a uniform character and use—that is, they qualify the sense of names, attributes, and modifiers—they are the attributes or attributives of the words to which they are prefixed; and as they have but one use, so they are entitled to but one name.

† It is well known to antiquaries and philologists that our language and the Latin had a common origin. In the use of more and most, we have a remarkable proof of this fact, which seems to have escaped notice. The fact is, that more and most, or the radical words, form the terminations of the regular comparative and superlative
When attributes end in \( y \) after a consonant, this letter is dropped, and \( i \) substituted before \( er \) and \( est \); as lofty, loftier, loftiest.

Perlative degrees of attributes in the Latin language. \textit{Tristior} is simply an abbreviation of \textit{tristis-more}, and \textit{tristissimus} of \textit{tristis-most}. It appears from the place which these qualifying words occupy, that the primitive arrangement was the natural one—that is, the attribute, being the most important word, was uttered first, and the qualifying term was subjoined—\textit{tristis-more}. In the rapidity of a familiar utterance, these words were incorporated into one; the last letters of the attribute being retrenched or varied, as ease or melody dictated—\textit{pulcher-more}, \textit{pulchrior—pulcher-most}, \textit{pulcherrimus—recens, recentis, recentis-more, recentior—recentius-most, recentissimus}. We probably see the same words in the terminations of irregular attributes—\textit{minimus, maximus—pejor, pessimus}, \\&c.

It is equally worthy of our notice, that the English language has preserved a few words, in which the qualifiers are annexed to the end of the attribute; as fore-most, hind-most, upper-most, under-most, neither-most, ut-most, utter-most, northern-most, southern-most, eastern-most, western-most.

But what will the English student say, when he is informed, that the regular terminations of the comparative and superlative degrees of English attributes, \( er \) and \( est \), are mere contractions of \textit{more} and \textit{most}? \textit{Wiser, wisest} are mere abbreviations of \textit{wise-more}, \textit{wise-most}.

To perceive the reason of the contraction into \( er \) and \( est \), rather than into \( or \) and \( ost \), we must refer to the Saxon, in which the words were spelt \textit{mere} and \textit{most}. We have not however managed these qualifiers so advantageously as the Romans did; for they modified their orthography in such a manner as to incorporate them with words of any number of syllables, without impairing the melody of the pronunciation; whereas we are limited in the use of the terminations \( er \) and \( est \) to monosyllables and a very few dissyllables.

These modifying words must have been coeval with the original language, which was the parent of the Greek and Latin, and all the Teutonic dialects; for we see \textit{more or mo} in the Latin \textit{major}, and the French \textit{mais}; and we see \textit{more} and \textit{most} in the Saxon \textit{mere} and \textit{most}; the Germans \textit{mehr, meist}, the Dutch \textit{meer} and \textit{meest}.

The Germans and Dutch also use these words to form the comparative and superlative attributes; as gross, grasser, greatest—great, greater, greatest—\textit{rijk, rijkere, rijkst}, rich, richer, richest.

\textit{More} and the ancient \textit{mo}, are supposed to be derived from the Hebrew \textit{maw}, to dilate or extend. The word \textit{more} is found in all the Celtic and Teutonic dialects. In the Celtic it had the sense of \textit{great}, and was united to names to augment their signification, as in the Irish \textit{senjmar}, abounding with \textit{wine—mo-dhalach, arrogance};
A few attributes have different words or irregular terminations for expressing the degrees of comparison; as good, better best; bad or evil, worse, worst; fore, former, first; little, less or lesser, least; much, more, most; near, nearer, nearest or next; old, older, oldest or eldest; late, later, latest or last.

When qualities are incapable of increase or diminution, the words which express them do not admit of comparison. Such are the numerals, first, second, third, &c. attributes of mathematical figures, as square, spherical, rectangular—for it will readily appear, that if a thing is first or square, it cannot be more so.

The sense of attributes however is not restricted to the modification, expressed by the common signs of comparison; but may be varied in an indefinite number of ways, by other words. Thus the attribute very, which is the French vrai, true, formerly written veray, is much used intensively to express a great degree of a quality, but not the greatest; as very wise or learned. In like manner are used much, far, extremely, exceedingly, and most of the modifiers in ly.

Some attributes, from particular appropriate uses, have received names, by which they are distinguished. But the usual classification is by no means correct. The following distribution seems to result from the uses of the words named.

An or a, the, this, that, these, those, other, another, one, none, some, may be called definitives, from their office, which is to limit or define the extent of the name to which they are prefixed, or to specify particulars.

My, thy, her, our, your, their; and mine, thine, his, when used as attributes, with names, are possessive attributes, as they denote possession or ownership. Its and whose, if ranked with attributes, belong to the same class.

Each and every are distributives, but they may be classed with the definitives.

and probably from continued use, in this manner, it came to express comparison. Most, in the Icelandic, signifies greatest; mikel, meir, mest, great, greater, greatest. Better and best are from the Celtic mat, good; m and b being convertible.
Either is an alternative, as is or, which is now considered merely as a connective.

Own is an intensive attribute.* The words to which self is affixed, himself, myself, themselves, yourself, yourselves, ourselves, thyself, itself, may be denominated intensive substitutes, or for brevity, intensives. Or they may be called compound substitutes.

Who, which, what, may be called connective substitutes, for sake of distinction; tho they are interrogatives also. Who is always a substitute. Which and what are either substitutes or attributes.

Verbs.

The verb is a primary part of speech, and next to the name or noun, is of the most importance. The uses of the verb are,

1st. To affirm, assert or declare; as the sun shines; John loves study; God is just; and negatively; avarice is not commendable.

2d. To command, exhort or invite; as go, attend, let us observe.

3d. To pray, request, entreat; as O may the spirit of grace dwell in us.

4. To inquire, or question; as does it rain? Will he come?

From the various uses and significations of verbs, have originated several divisions or classes. The only one in English which seems to be correct and sufficiently comprehensive, is, into transitive and intransitive. To these may be added a combination of the verb be, with certain auxiliars and verbals, which is called a passive verb.†

* Own is a corruption of agenne, or agen, from the Saxon verb again, to possess.
† The common distribution into active, neuter and passive, is very objectionable. Many of our neuter verbs imply action in a pre-eminent degree, as to run, to walk, to fly; and the young learner cannot easily conceive why such verbs are not called active.
1st. A *transitive* verb denotes action or energy, which is exerted upon some object, or in producing some effect. In natural construction, the word expressing the object, follows the verb, without the intervention of any other word, tho the order may be sometimes varied. Thus "ridicule provokes anger," is a complete proposition—*ridicule* is the agent or nominative word, which causes the action—*provoke* is the verb, or affirmation of an act—*anger* is the object or effect produced, following the transitive verb *provoke*.

"The wind propels a ship," is the affirmation of an act of the wind exerted upon a ship. *Wind* is the agent, *propels* the verb, and *ship*, the object.

2. An *intransitive* verb denotes simple being or existence in a certain state; as to be, to rest: Or it denotes action, which is limited to the subject. Thus, "John sleeps," is an affirmation, in which *John*, the nominative to *sleeps*, is the subject of the affirmation; *sleeps* is a verb intransitive, affirming a particular thing of *John*, which extends to no other object.

3. The *passive* verb in English is formed by adding certain auxiliars and participles to the verb *be*. It denotes passion or suffering; that is, that the subject of the affirmation or nominative is affected by the action affirmed; as "John is convinced." "Laura is loved and admired."

In this form of the verb, the agent and object change places. In the transitive form the agent precedes the verb, and the object follows; as "John has convinced Moses." In the passive form the order is changed, and the agent follows the verb preceded by a preposition; as "Moses is convinced by John."

To correspond with their nominatives, verbs are used in both numbers, and with the three persons in each.

As action and being may be mentioned as present, past and future, verbs have modifications to express time, which are called *tenses*. And as action and being may be represented in various ways, verbs have various modifications to answer these purposes, called *modes* or *moods*. Hence to verbs belong person, number, tense and mode.
The persons, which have been already explained, are, I, thou or you, he, she, it, in the singular number; in the plural, we, ye or you, they. The numbers have been before explained.

Tenses.

There are six tenses or modifications of the verb to express time. Each of these is divided into two forms, for the purpose of distinguishing the definite or precise time from the indefinite. These may be thus explained and exemplified.

Present tense, indefinite.

This form of the present tense affirms or denies action or being, in present time, without limiting it with exactness to a given point. It expresses also facts which exist generally, at all times, general truths, attributes which are permanent, habits, customary actions, and the like, without reference to a specific time; as God is infinitely great and just; man is imperfect and dependent; plants spring from the earth; birds fly; fishes swim.

Present tense, definite.

This form expresses the present time with precision; usually denoting action or being which corresponds in time with another action; as I am writing, while you are waiting.

Past tense, indefinite.

This form of the past tense represents action which took place at a given time past, however distant and completely past; as "In six days, God created the heavens and the
72

A PHILOSOPHICAL AND

earth.” “Alexander conquered the Persians.” “Scipio was as virtuous as brave.” “The Earl of Chatham was an eloquent statesman.”

Past tense, definite [imperfect.]

This form represents an action as taking place and unfinished in some specified period of past time; as “I was standing at the door when the procession passed.”

Perfect tense, indefinite.

This form of the perfect tense represents an action completely past, and often at no great distance, but not specified; as “I have accomplished my design.” But if a particular time is named, the tense must be the past; as “I accomplished my design last week.” “I have seen my friend last week,” is not correct English. In this respect, the French idiom is different from the English, for “J'ai vu mon ami hier” is good French, but “I have seen my friend yesterday,” is not good English. The words must be translated “I saw my friend yesterday. No fault is more common than a mistranslation of this tense.

It is to be noted however that this perfect indefinite tense, is that in which we express continued or repeated action; “My father has lived about eighty years.” “The king has reigned more than forty years.” “He has been frequently heard to lament.” Life of Cowper. We use it also when a specified past time is represented, if that time is expressed as a part of the present period. Thus, altho we cannot say “We have been together yesterday,” we usually say “We have been together this morning, or this evening.” We even use this tense in mentioning events which happened at a greater distance of time, if we connect that time with the present; as “his brother has visited him once within two years.” “He has not seen his sister, since the year 1800.”
Perfect tense, definite.

This form represents an action as just finished; as "I have been reading a history of the revolution in France."

Prior-past tense, indefinite* [pluperfect.]

This form of the prior past tense expresses an action which was past at or before some other past time specified; as "he had received the news before the messenger arrived."

Prior-past, definite.

This form denotes an action to be just past, at or before another past time specified; as "I had been reading your letter when the messenger arrived."

Future tense, indefinite.

This form of the future tense gives notice of an event to happen hereafter; as, "Your son will obtain a commission in the navy." "We shall have a fine season."

Future tense, definite.

This form expresses an action which is to take place and be unfinished at a specified future time; as "He will be preparing for a visit, at the time you arrive."

* This name, prior-past, is infinitely preferable to the usual one, preter-pluperfect, or pluperfect.
Prior-future, indefinite.

This form of the future tense denotes an action which will be past at a future time specified; as "They will have performed their task, by the appointed hour."

Prior-future, definite.

This form represents an action which will be just past at a future specified time; as "We shall have been making preparations a week before our friends arrive."

In the use of the present tense, the following things are to be noticed.

1st. The present tense is customarily used to express future time, when by any mode of expression, the mind is transported forward to the time, so as to conceive it present; as "I cannot determine, till the mail arrives." "As soon as it is light, we shall depart." "When he has an opportunity, he will write." The words till, when, as soon as, carry the mind to the time of an event to happen, and we speak of it as present.

2. By an easy transition, the imagination passes from an author to his writings; these being in existence and present, tho long after his decease, we substitute the writer's name for his works, and speak of him as living, or in

* The common names and distribution of the tenses, are so utterly incorrect and incompetent to give a just idea of their uses, that I have ventured to offer a new division, retaining the old names, as far as truth will warrant. The terms prior-past, and prior-future, are so perfectly descriptive of the tenses arranged under them, that I cannot but think they will be well received. The distinction of indefinite and definite is not wholly new; but I have never seen the definite forms displayed, though they are as necessary as the indefinite forms. Indeed, I see not how a foreigner can learn our language, as the tenses are commonly distributed and defined.
the present tense; thus, Milton resembles Homer in sublimity and invention, as Pope resembles Virgil, in smoothness of versification. Plato is fanciful; Aristotle is profound.

3. It gives great life and effect to description, in prose or verse, to represent past events as present; to introduce them to the view of the reader or hearer, as having a present existence. Hence the frequent use of the present tense for the future, by the historian, the poet and the orator:

"She spoke; Minerva burns to meet the war;
And now heaven's empress calls the blazing car;
At her command rush forth the steeds divine,
Rich with immortal gold, the trappings shine."

_Iliad_, 5.

The definite tenses, it will be observed, are formed by the verbal or participle of the present tense, and the substantive verb, _be_. This verbal always expresses present time, even when annexed to a past or future tense; for _I was writing_ denotes that at the past time mentioned, the action was present; _I shall be writing_ denotes future time, but an action then to be present.

The past tense of every regular verb ends in _ed_—_d_ being added to a verb ending in _e_; and _ed_ to a verb with other terminations; as hate, hated; look, looked.

The future tense is formed of the present tense of _shall_ and _will_; for, I shall go, he will go, are merely an appropriate use of _I shall to go_, _I will to go_. See an explanation of these words under the head of auxiliaries.

There are other modes of expressing future time; as "I am going to write"—"I am about to write." These have been called the _indefinite_ future, as they note the commencement of an action, or an intention to commence an action without delay.

We have another mode of expression, which does not strictly and positively foretell an action, yet it implies a necessity of performing an act, and clearly indicates that it will take place. For example, "I have to pay a sum of money to-morrow." That is, I am under a present necessity or obligation to do a future act.
The substantive verb followed by a radical verb, forms another idiomatic expression of future time; as "John is to command a regiment." "Eneas went in search of the seat of an empire which was, one day, to command the world." The latter expression is a future past—that is, past as to the narrator; but future as to the event, at the time specified.

Modes.

Mode, in grammar, is the manner of representing action and being, or the wishes and determinations of the mind. This is performed by inflections of the verb, or by combinations of verbs with auxiliaries, and verbals or participles, and by their various positions.

As there are scarcely two authors who are agreed in the number and denominations of the modes in English, I shall offer a distribution of the verbs, and a display of their inflections and combinations, somewhat different from any which I have seen.

1. The first and most simple form of the verb, is, the verb without inflections, and unconnected with persons. This form usually has the prefix to; as to love. To denotes act, motion, purpose or effect. The use of it is to convert a name into a verb; for love being the name of a certain passion, to love, is, act or motion to love. Such is the primary use of to before verbs.

This form of the verb, not being restricted to person or number, is usually called the Infinitive Mode.—Indefinite Mode would be preferable; and I should still prefer to either, the terms Radical Verb.*

2. Another use of the verb is to affirm, assert, or declare some action or existence, either positively, as he runs, or

---

*The general use of to for forming the infinitive mode, is of modern date. The Saxons had a distinct termination for the Infinitive verbs; as gisan, to give. But to in Greek had a use nearly similar to its modern use in English.
negatively, as you are not in health. This form is called the Indicative Mode—tho declarative would be more appropriate.

3. Another office of the verb is to command, direct, ask, or exhort; as arise, make haste, let us be content. This is called the Imperative Mode.

4. Another form of the verb is to declare the power, liberty, possibility, or necessity of action or being, by means of certain words called auxiliars, as may, can, must &c. This form is called the Potential Mode; as I may or can write; he must wait.*

5. Another use of verbs is to represent actions or events which are uncertain, conditional or contingent; as if he shall go; if they would attend. This is called the Subjunctive Mode; but would better be denominated the Conditional. The Indicative and Potential become conditional, by means of words used to express condition; as if, tho, unless, whether.

The Modes then are five.—The Infinitive or Radical Verb, the Indicative or Declarative, the Infinitive, the Potential, and the Conditional. But the Infinitive might be discarded without inconvenience.

It may also be observed that the combinations, and arrangements of our verbs and auxiliars, to express negative and interrogative propositions, are really modes of the verb, and a place might be assigned to the verb for each purpose, were it not for the inconvenience of having modes of modes. For the sake of distinction, I denominate these verbs interrogative and negative, and have exhibited the conjugation of each.

* This mode is inserted in compliance with the opinion of many Grammarians; but in opposition to my own. It is in fact the Indicative mode, affirmin...
Verbals or Participles.

Verbals, commonly called participles, are derivatives from verbs, formed by particular terminations, and having the sense of verbs, attributes or names.

There are two species of verbals—one denoting present time, and formed by adding *ing* to the verb: as turn, turning; or when the verb ends with *e*, by dropping that letter and adding *ing*; as place, placing. But *e* is retained in *dyeing*, from *dye*, to color, to distinguish it from *dying*, the verbal of *die*; in which word, *y* is used to prevent the duplication of *i*. In *singeing*, from *singe*, *e* is retained to soften *g*, and to distinguish the word from *singing*; so also in *twingeing*.

This verbal of the present tense, is used, as before observed, to form the definite tenses. But it often loses the sense of the verb, and becomes an attribute; as a *loving* friend, *lasting* friendship. In this use, it admits of comparison by more and less, most and least; as *more lasting, less saving, most promising*. The verbal, in this use, may be called a verbal attribute.

This verbal also becomes a modifier by receiving the termination *ly*; as lovingly, laughingly: and this species of modifiers admits of comparison, as more lovingly, most charmingly.

This verbal also becomes a name and admits of the definitives; as “The burning of London in 1666.” In this capacity, it takes the plural form, as “the overflowings of the Nile”—“He seeth all his goings.” And sometimes the plural is used when a modifier is attached to the verbal; as “the goings out, the comings in.” Ezek. 43. 11. But this use of the verbal is not esteemed elegant, nor is it common.

In a few instances, the verbal in *ing* becomes a name by receiving the termination *ness*; as *willingness*, from *willing*.

The other species of verbal or participle is formed from the verb, by adding *d* or *ed*, and in regular verbs, it corresponds exactly with the past time; as *loved, proceeded*. This may be called the verbal of the perfect tense.
This verbal, when its verb is *transitive*, may be joined with the verb *be*, in all its inflections, to form a passive verb, and the verbal, in such combination, is called *passive*. But

This verbal, when formed from an *intransitive* verb, cannot, except in a few instances, be joined to the substantive verb, or used in a passive sense; but it unites with the other auxiliars.

This verbal often loses its verbal character, and becomes an attribute; as a concealed plot, a painted house. In this character, it admits of comparison; as "a more admired artist," "a most respected magistrate," and a few of these verbal attributes receive the termination *ly*, and become modifiers; as pointedly, more conceitedly, most defectively.

Those verbs, whose past tense and participle end in *ed*, are deemed regular. All which deviate from this rule, are deemed irregular, and their verbals of the perfect tense end mostly in *t, n* and *g*. A list of them will be found in the sequel.

**Auxiliars.**

In English, a few monosyllabic verbs are chiefly employed to form the modes and tenses of other verbs, and from this use, are denominated auxiliars, or helping verbs. These are followed by other verbs, without the prefix *to*; as "he may go;" tho they were originally principal verbs, and some of them still retain that character, as well as that of auxiliars.

The verbs which are always auxiliary to others, are *may, can, shall, must*; those which are sometimes auxiliars, and sometimes principal verbs, are, *will, have, do, and be*. To these may be added *need* and *dare*.

*May* conveys the idea of liberty or permission; as "he may go, if he will." Or it denotes possibility; as "he may have written or not."*

*The primitive idea expressed by *may* was power; Sax. *megan* to be able.*
Can, which is from the same radical as ken and con, to see and know, has now the sense of to be able.

Shall, in its primitive sense, denotes to be obliged, coinciding nearly with ought; which sense it retains in the German. But this signification, the evidently the root of the present uses of this word, is much obscured. The following remarks will illustrate the several uses of will and shall.

Will has a common origin with the Latin volo. Hence the German wollen, the old English woll, and the present contraction won’t, that is, will-not.*

This was originally a principal verb, and is still used as such in our language. It denotes the act of the mind in determining; or a determination; for he wills to go, and he will go, are radically of the same import.

When a man expresses his own determination of mind, I will, we are accustomed to consider the event, or act willed, as certain; for we naturally connect the power to act, with the intentions; hence we make the declaration of will a ground of confidence, and by an easy association of ideas, we connect the declaration, with an obligation to carry the determination into effect. Hence will, expressed by a person himself, came to denote a promise.

But when a person declares the will of another, he is not supposed to possess the power to decide for him, and to carry his will into effect. He merely offers an opinion, grounded on information or probable circumstances, which give him more or less confidence of an event depending on another’s will. Hence will in the second and third person simply foretells, or expresses an opinion of what will take place.

Shall, in some of its inflections, retains its primitive sense—to be obliged, or bound in duty—but in many of its uses, its sense is much varied. In the first person, it merely foretells; as “I shall go to New-York to-morrow.” In this phrase, the word seems to have no reference to obligation; nor is it considered by a second person as imposing any obligation on the person uttering it. But when shall

* It is supposed that the Roman v was pronounced as our w, volo.
is used in the second and third persons, it resumes its primitive sense, or one nearly allied to it, implying obligation; as when a superior commands with authority, you shall go; or implying a right in the second and third person to expect, and hence denoting a promise in the speaker; as "you shall receive your wages." *This is radically saying "you ought to receive your wages;" but this right in the second person to receive, implies an obligation in the person speaking to pay. Hence shall in the first person foretells; in the second, promises, commands, or expresses determination. When shall in the second and third persons, is uttered with emphasis, it expresses determination in the speaker, and implies an authority to enforce the act. "You shall go."

*Must* expresses necessity, and has no variation for person, number or tense.

*Do* is a principal and a transitive verb, signifying to act or make; but is used in the present and past tenses as an auxiliar, to give emphasis to a declaration, to denote contrast, or to supply the place of the principal verb.

"It would have been impossible for Cicero to inflame the minds of the people to so high a pitch against oppression, considered in the abstract, as he actually did inflame them against Verres the oppressor." Camp. Rhet. 1. 10. Here did expresses emphasis.

"It was hardly possible that he should not distinguish you as he has done." Cowp. Let. 40. Here done stands in the place of distinguished you. For it must be observed that when do is the substitute for another verb, it supplies the place not only of the verb, but of the object of the verb.

———"He loves not plays
As thou dost, Anthony."

That is, as thou lovest plays.

*Do* is also used in negative and interrogative sentences; the present and past tenses of the Indicative Mode being chiefly formed by this auxiliar; as "I do not reside in Boston." Does John hold a commission?

*Have* is also a principal and transitive verb, denoting to possess; but much used as an auxiliar; as "He has lately
been to Hamburg." It is often used to supply the place of a principal verb or verbal, preventing a repetition of it, and the object after it; as "I have not seen Paris, but my brother has"—that is, has seen Paris.

Equally common and extensive is the use of be, denoting existence, and hence called the substantive verb. Either in the character of a principal verb, or an auxiliary, it is found in almost every sentence of the language.

The inflection of a verb, in all the modes, tenses, numbers and persons, is termed Conjugation. The English verbs have few inflexions, or changes of termination; most of the tenses and modes being formed by means of the auxiliaries.

NOTE. In the following conjugations, a small n in an Italic character, is inserted in the place where not should stand in negative sentences. The same place is generally occupied by never, but not in every case. It is believed this letter will be very useful, especially to foreigners. The learner may conjugate the verb with or without not, at pleasure.

**Conjugation of the Auxiliars.**

**MAY.**

**Present Tense.**

<td>3d.</td>
<td>fem. She may n</td>
<td>neut. It may n</td>
</tr>
</tbody>
</table>

* It may be remarked once for all, that thou and ye are the second person used in the sacred style; and sometimes in other grave discourses. In all other cases, you is the second person of the singular number, as well as of the plural. It is not one of the most trivial absurdities which the student must now encounter at every step, in the study of English grammar, that he meets with you in the plural number only, though he finds it the representative of an individual.
PRACTICAL GRAMMAR.

Past Tense.

I might n
Thou mightest n
You might n
He might n
We might n
Ye might n
You might n
They might n

CAN.

Present Tense.

I can n
Thou canst n
You can n
He can n
We can n
Ye can n
You can n
They can n

Past Tense.

I could n
Thou couldst n
You could n
He could n
We could n
Ye could n
You could n
They could n

SHALL.

Present Tense.

I shall n
Thou shalt n
You shall n
He shall n
We shall n
Ye shall n
You shall n
They shall n

Past Tense.

I should n
Thou shouldst n
You should n
He should n
We should n
Ye should n
You should n
They should n
Will.

Present Tense.

I will <n> We will <n>
Thou wilt <n> Ye will <n>
You will <n> You will <n>
He will <n> They will <n>

Past Tense.

I would <n> We would <n>
Thou wouldst <n> Ye would <n>
You would <n> You would <n>
He would <n> They would <n>

Note. Will, when a principal verb, is regularly conjugated; I will, thou wiltest, he wills. Past tense, I willed.

Must.

Must has no change of termination, and is joined with verbs only in the following tenses.

Present Tense.

I must <n> love We must <n> love
Thou must <n> love Ye must <n> love
You must <n> love You must <n> love
He must <n> love They must <n> love.

Perfect Tense.

I must <n> have loved We must <n> have loved
Thou must <n> have loved Ye must <n> have loved
You must <n> have loved You must <n> have loved
He must <n> have loved They must <n> have loved.
PRACTICAL GRAMMAR.

DO.

Indicative or Declarative Mode.

Present Tense.

I do re love  We do re love
Thou dost re love  Ye do re love
You do re love  You do re love
He does or doth re love  They do re love.

Past Tense.

I did re love  We did re love
Thou didst re love  Ye did re love
You did re love  You did re love
He did re love  They did re love.

Radical Verb.  Verbals or Participles.

To do.  Doing, done; having done.

Note. In the third person singular of the present tense, doth is used in sacred and solemn language; does, in common and familiar language. This verb, when principal and transitive, has all the tenses and modes, I have done, I had done, I will do, &c.

HAVE.

Radical Verb, or Infinitive Mode, Present Tense.

To have.

Perfect Tense.

To have had.

Verbal, or Participle of the Present Tense.

Having.

Of the Perfect Tense.

Had.

Compound.

Having had.
Declarative or Indicative Mode.

Present Tense.

I have n  
Thou hast n  
You have n  
He has or hath n

We have n  
Ye have n  
You have n  
They have n

Past Tense.

I had n  
Thou hadst n  
You had n  
He had n

We had n  
Ye had n  
You had n  
They had n

Note. In the foregoing tenses, this verb is used either as a principal verb or an auxiliary.

Perfect Tense.

I have n had  
Thou hast n had  
You have n had  
He has or hath n had

We have n had  
Ye have n had  
You have n had  
They have n had

Prior-past Tense.

I had n had  
Thou hadst n had  
You had n had  
He had n had

We had n had  
Ye had n had  
You had n had  
They had n had

Note. In these tenses, the perfect and prior-past, this verb is always principal and transitive.

Future Tense.

In this tense, the verb is principal or auxiliary, with the same form of conjugation.

* Hath is used in the solemn style; has in the familiar.
The following form foretells:

<table>
<thead>
<tr>
<th>Subject</th>
<th>Present</th>
<th>Future</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>shall n have</td>
<td>will n have</td>
</tr>
<tr>
<td>Thou</td>
<td>wilt n have</td>
<td>will n have</td>
</tr>
<tr>
<td>You</td>
<td>will n have</td>
<td>will n have</td>
</tr>
<tr>
<td>He</td>
<td>will n have</td>
<td>will n have</td>
</tr>
</tbody>
</table>

The following form promises, commands or determines:

<table>
<thead>
<tr>
<th>Subject</th>
<th>Present</th>
<th>Future</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>will n have</td>
<td>will n have</td>
</tr>
<tr>
<td>Thou</td>
<td>shalt n have</td>
<td>will n have</td>
</tr>
<tr>
<td>You</td>
<td>shall n have</td>
<td>will n have</td>
</tr>
<tr>
<td>He</td>
<td>shall n have</td>
<td>will n have</td>
</tr>
</tbody>
</table>

Prior-Future.

This tense foretells, and is used only when the verb is principal.

<table>
<thead>
<tr>
<th>Subject</th>
<th>Present</th>
<th>Future</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>shall n have had</td>
<td>will n have had</td>
</tr>
<tr>
<td>Thou</td>
<td>shalt or wilt have had</td>
<td>will n have had</td>
</tr>
<tr>
<td>You</td>
<td>shall or will n have had</td>
<td>will n have had</td>
</tr>
<tr>
<td>He</td>
<td>shall or will n have had</td>
<td>will n have had</td>
</tr>
</tbody>
</table>

Note. Will is not used in the first person of this tense, it being incompatible with the nature of a promise. We cannot say, "I will have had possession a year, on the first of October next," but I shall have had, is a common expression.

Imperative Mode.

Sing. | Plur. |
--- | --- |
Have n or have thou n | Have ye n, have you n |
Have you n or do n you have | Do n you have |
Let me n have | Let us n have |
Let him n have | Let them n have |
A command, request or exhortation, must, in the nature of things, be addressed to the second person; nor can these phrases, let me have, let us have, be considered, in strictness, as the first person of this mode; nor let him have, as the third; but they answer to the first and third persons of this mode in other languages, and the mere naming of them is wholly immaterial.

The true force and effect of the verb, in this mode, depend on its application to characters, and the manner of utterance. Come, go, let him go, if uttered with a respectful address, or in a civil manner, may express entreaty, request or exhortation. On the other hand, such words uttered with a tone of authority, and addressed to inferiors, express command.

**Potential Mode.**

**Present Tense.**

In the following tense, this verb is either auxiliary or principal.

<table>
<thead>

You might not have
You should not have
You could not have
You would not have
He might not have
He should not have
He could not have
He would not have

You could not have
You would not have

Perfect Tense.

In this tense, have is a principal verb only.

I may not have had
Thou mayest not have had
You may not have had
He may not have had

We may not have had
Ye may not have had
You may not have had
They may not have had

Prior-past Tense—the principal verb only.

I might not have had
Thou mightest not have had
You might not have had
He might not have had

We might not have had
Ye might not have had
You might not have had
They might not have had

In the same manner with should, could and would.

There is no future tense, distinct from that of the Indicative Mode.

Conditional or Subjunctive Mode.

The Conditional or Subjunctive Mode is the same as the Declarative or Indicative; with some preceding word expressing condition, supposition, or contingency. These words are if, tho or altho, unless, except, whether, lest, albeit. If is a corruption of gif, the imperative of gifan, the Saxon orthography of give. Tho, the Saxon theah, is pro-
bably the same word as the Celtic *thoir*, and Latin *da*, the imperative of the verb *do, dare*, to give. *Altho* is a compound of *all* and *the*, to give or allow all. The old word *thof*, still used in some parts of England, is the imperative of the Saxon *thoian*, to allow. *Unless*, is the imperative of the Saxon *onlysan*, to loose, or dissolve. *Except* is the imperative of that verb. *Whether* is a compound of two Saxon words, *howe* and *thar*, *what that*, or *which that*; referring primarily to two following things or sentences; and denoting an alternative, one or the other. "*Whether* heora sceolde on othurum sige habban—*the he on Romanum; the Romane on him.*" *Whether* of them should have the victory over the other—*that, he over the Romans, or that, the Romans over him.* *Alf. Oros.* 132. This sentence is a precise illustration of the use of *whether*, which is a compound substitute, *which that*—that is, which of the two declarations which follow; *that, or that*. *Lesi* is from *lesan*, to lease or dissolve. *Albeit*, is a compound of *all, be and it*, let it be so.

These words, *if, tho, answer in signification and use, to the following; admit, grant, allow, suppose, as signs of a condition or hypothesis; "if you shall go," is simply "give, you shall go;" that is, give that condition or fact; allow or suppose it to be so.

It has been, and is still customary for authors to omit the personal terminations of the second and third persons of the verb in the present tense, to form the subjunctive mode; *if thou go, if he write*. This practice seems to have originated in the Saxon mode of expressing a future contingency; *gif he habbe*, if he have; which in reality, the future tense, used before *shall and will* became the appropriate signs of the future. This has been the source of continual error, in writing conditional sentences; and the error, being very general in the age of Elizabeth and James, was introduced into the translation of the Scriptures, and made the basis of a rule by Dr. Lowth. Thus it happens in the scriptures, as in other writings, the future tense, denoting a *future contingency*, is continually confounded with the present tense, denoting *present uncertainty*. 
The correct construction of the subjunctive mode is precisely the same as that of the indicative; as it is used in popular practice, which has preserved the true idiom of the language; *if thou hast, if he has or hath*; to denote present uncertainty. But a future contingency may be expressed by the omission of the personal terminations; *if he go, that is, if he shall go."

This principle of our language corresponds with that of the Gallic or Erse, the primitive language of Europe; in which a condition is expressed by the indicative mode, with *ma; if*, prefixed. *Shaw's Analysis*, p. 61.

*Be.*

Be is a verb denoting existence, and therefore called the *substantive* verb. It is very irregular, being derived from different radicals, and having undergone many dialectical changes. It has two sources, as Jones in his Greek Grammar, has justly observed; the Hebrew *æw*, the appropriate name of the author of all being, Jehovah or Jove; and *æur*, light, which figuratively represented life. The Greeks formed the first person upon the model of verbs in *æi*, *eimi*; and the Latin *sum* and English *am* are from the same source. The Greek *eis*, *ei*; the Latin *es*, *est*, and the English *is* and *was* are from the same source. The Latin *eram*, *ero*, the English *are*, *art* and *were*, and the German *werden*, *wer* from *aur*, light, for *to be*, *to exist*, was considered as the *enjoyment of light*. *Be* from the German *beon*, originated in the change of the Hebrew *v* into its cognate letter *b; eve, øbe*, a change very common in the progress of language; and hence also the Greek *blw* and Latin *viv*, to live. Thus we observe the verb denoting existence, originated in the name of God who is existence itself, and the author of all created beings.

Radical Verb, or Infinitive, Present Tense.

*To be.*

Perfect Tense.

*To have been.*
A PHILOSOPHICAL, AND

Verbal of the Present Tense.

Being.

Of the Perfect.

Been.

Compound.

Declarative or Indicative Mode.

Present Tense.

I am 
Thou art 
You are 
He is 
She is 
It is 
We are 
Ye are 
You are 
They are 

The foregoing form of the present tense is now generally used by good writers. But the following form is the most ancient, is found in the translation of the bible, and other good English authorities, and is still very general in popular practice.

I be 
You be 
He is 
Thou beest, in the second person, is not in use.

We be 
Ye or you be 
They be 

Past Tense.

I was 
Thou wast 
You was or were 
He was 
We were 
Ye were 
You were 
They were 

* The compilers of grammars condemn the use of was with you —but in vain. The practice is universal, except among men who learn the language by books. The best authors have given it their sanction, and the usage is too well established to be altered.

</table>

In the same manner with *could, would and should.* There is no future tense in this mode.
Conditional or Subjunctive Mode.

This Mode is formed by prefixing any sign of condition, hypothesis or contingency, to the indicative mode in its various tenses.

**Present Tense.**

<table>
<thead>
<tr>
<th>If I am</th>
<th>We are</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thou art</td>
<td>Ye are</td>
</tr>
<tr>
<td>You are</td>
<td>You are</td>
</tr>
<tr>
<td>He is</td>
<td>They are</td>
</tr>
</tbody>
</table>

**Past Tense.**

<table>
<thead>
<tr>
<th>If I was</th>
<th>We were</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thou wast</td>
<td>Ye were</td>
</tr>
<tr>
<td>You was or were</td>
<td>You were</td>
</tr>
<tr>
<td>He was</td>
<td>They were</td>
</tr>
</tbody>
</table>

The foregoing tenses express uncertainty, whether a fact exists or existed; or they admit the fact. The following form is used for the like purposes:

<table>
<thead>
<tr>
<th>If I be</th>
<th>We be</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thou be</td>
<td>Ye be</td>
</tr>
<tr>
<td>You be</td>
<td>You be</td>
</tr>
<tr>
<td>He be</td>
<td>They be</td>
</tr>
</tbody>
</table>

But this is more properly the form of the conditional future; that is, the verb without the sign of the future—*if he be*, for *if he shall be*.

The following is the form of expressing supposition or hypothesis, and may be called the

**Hypothetical Tense.**

<table>
<thead>
<tr>
<th>If I were</th>
<th>We were</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thou wert</td>
<td>Ye were</td>
</tr>
<tr>
<td>You was or were</td>
<td>You were</td>
</tr>
<tr>
<td>He were</td>
<td>They were</td>
</tr>
</tbody>
</table>
"If I were," supposes I am not; "if I were not," supposes I am.*

The other tenses are the same as in the indicative mode.

* No fault is more common than the misapplication of this tense.

In the Saxon, *were* was often used in the third person of the indicative mode, and without a preceding sign of condition; as in these examples—"After thistem haifold the mycel getheal, and wylde deope space with his witan ymbe this land, hu hit were gesett.

Sax. Chron. An. 1085. After this the king held a great council, and made important representations respecting this land, how it were settled." In the German, the inflection of the word, in the imperfect tense of the indicative is—Ich war, du warst, er war, sie war. The orthography of the word, in the imperfect tense of the subjunctive, is ware and our early English writers seem to have confounded the two tenses. The regular Saxon verb in the past tense of the indicative was, thus inflected—Ic wxs, du ware, he was. Hence our greatest writers, Milton, Dryden, Pope and others, retained that form of the word—Before the heavens thou wert; remember what thou wert—expressions which Lowth condemns as not analogous to the formation of verbs in different modes. I would condemn this use of the verb also, but for a different reason; it is now obsolete.

But the use of this form of the verb is retained in the subjunctive mode, which, our grammars teach us, must follow the signs of condition—if, the, unless, whether—a rule which, without qualification, has a mischievous effect. On carefully examining the original state of the language, I find the common and true use of *were* in the singular number, is, to express hypothesis or supposition. Thus, Sax. Chron. ad annum 1017. On the third of the ides of December, at night, the moon appeared—"swylce he eall blodig were"—swylce he eall blodig were and the heaven was red, "swylce hit bryne were"—as if it were on fire. This use of were, in the singular number, is legitimate and is still retained by good writers—but its use to express a mere uncertainty respecting a past event, after a sign of condition, is obsolete or not legitimate. The following examples will illustrate the distinction—"Whether the killing were malicious or not, is no farther a subject of inquiry," &c. Judge Parker, *trial of Selfridge*, p. 161. Here were is improperly used—So also where the fact is admitted; "Tho he were a son, yet learn- ed he obedience." *Heb. 5. 8.* where Lowth justly condemns the use of were—"Unless a felony were attempted or intended." *Selfridge, Trial*, p. 125. It ought to be were.

The following is the true use of *were* in the singular number—"Were it necessary for you to take those books with you?" Judge Parker, *ibm.* 159. "If it were possible, they would deceive the elect?" *Matt. 24. 24.* This is the only legitimate use of this tense.

The Potential mode becomes conditional by means of the modifiers, if, tho, unless, &c. prefixed to its tenses, without any variation from the foregoing inflections. This may, for distinction, be called the Conditional Potential.
Conditional or Subjunctive Mode.

Present Tense.

If, tho, unless, whether, suppose, admit, &c.

I love n We love n
Thou lovest n Ye love n
You love n You love n
He loveth or loves n They love n

Some authors omit the personal terminations in the second and third persons—*if thou love, if he love*. With this single variation, which I deem contrary to the principles of our language, the conditional Mode differs not in the least from the indicative, and to form it, the learner has only to prefix a sign of condition, as if, tho, unless, &c. to the indicative, in its several tenses: With this exception, however, that in the future tense, the auxiliar may be and often is suppressed. Thus instead of

*If I shall or will love* We shall or will love
Thou shalt or wilt love Ye shall or will love
You shall or will love You shall or will love
He shall or will love They shall or will love

Authors write,

*If, &c. I love* We love
Thou love Ye love
You love You love
He love They love

It is further to be remarked, that *should* is very often used to form the conditional future—*if I should, thou shouldn't, &c.* This tense is inflected like the past tense of the potential, but is probably more used for the conditional future than *shall* and *will*.
The other auxiliaries also in the past time are used in this conditional mode in a very indefinite sense.

I shall therefore offer a new tense in this mode, composed of any principal verb, with might, could, should and would, expressing, like the Greek aorists, time indefinite present, past or future, especially the future.

Conditional Mode, indefinite Tense.

If, tho, unless, whether, lest, except, suppose, &c.

**Singular.**

I might, could, should, or would n love
Thou mightest, couldst, shouldst, wouldst n love
You might, could, should, would n love
He might, could, should, would n love

**Plural.**

We might, could, should, would n love
Ye or you might, could, should, would n love
They might, could, should, would n love

It should be noticed that the sign of the condition is not always expressed. **Supposition** or **hypothesis** may be well expressed without the modifiers if, tho, &c. As in the following; “It being no more necessary that there should be existing a solid body infinitely extended, because we have an idea of the infinity of space, than it is necessary that the world should be eternal, because we have an idea of infinite duration.” Locke on Und. b. 2. ch. 17.

In the conditional mode, there is a peculiarity in the tenses which should be noticed. When I say, *if it rains*, it is understood that I am uncertain of the fact, at the time of speaking. But when I say, “*if it rained*, we should be obliged to seek shelter,” it is not understood that I am uncertain of the fact; on the contrary, it is understood that I am certain, it does not rain at the time of speaking. Or if I say, “*if it did not rain*, I would take a walk,” I convey the idea that it does rain at the moment of speaking. This form of our tenses in the conditional mode has never been
the subject of much notice, nor ever received its due explanation and arrangement. For this hypothetical verb is actually a present tense, or at least indefinite—it certainly does not belong to past time. It is further to be remarked, that a negative sentence always implies an affirmative—"if it did not rain," implies that it does rain. On the contrary, an affirmative sentence implies a negative—"if it did rain, implies that it does not.

In the past time, a similar distinction exists; for "if it rained yesterday," denotes uncertainty in the speaker’s mind—but "if it had not rained yesterday," implies a certainty, that it did rain.

Passive form of the Verb.

**Indicative Mode.**

**Present Tense.**

- I am not loved
- Thou art not loved
- You are not loved
- He is not loved
- We are not loved
- Ye are not loved
- They are not loved

**Past Tense.**

- I was not loved
- Thou wast not loved
- You was or were not loved
- He was not loved
- We were not loved
- Ye were not loved
- They were not loved

**Perfect Tense.**

- I have not been loved
- Thou hast not been loved
- You have not been loved
- He has or hath not been loved
- We have not been loved
- Ye have not been loved
- They have not been loved
Prior-past Tense.

I had been loved  We had been loved
Thou hadst been loved  Ye had been loved
You had been loved  You had been loved
He had been loved  They had been loved

Future Tense.

I shall or will be loved  We shall or will be loved
Thou shalt or wilt be loved  Ye shall or will be loved

They may, can or must n be loved.

Past Tense.

I might n be loved
Thou mightest n be loved
You might n be loved
He might n be loved

We might n be loved
Ye might n be loved
You might n be loved
They might n be loved.

With could, should and would in the same manner.

Perfect Tense.

I may, can or must n have been loved
Thou mayest, canst or must n have been loved
You may, can or must n have been loved
He may, can or must n have been loved

We may, can or must n have been loved
Ye may, can or must n have been loved
You may, can or must n have been loved
They may, can or must n have been loved.

Prior-past Tense.

I might n
Thou mightest n
You might n
He might n

We
Ye
You
They

have been loved
have been loved
have been loved
have been loved

might n have been loved.

In the same manner, with could, would and should.
Conditional or Subjunctive Mode.

Present Tense.

If, &c. I am n loved
Thou art n loved
You are n loved
He is n loved

We are n loved
Ye are n loved
You are n loved
They are n loved.

Or thus:

If, &c. I be n loved
Thou be n loved
You be n loved
He be n loved

We be n loved
Ye be n loved
You be n loved
They be n loved.

Past Tense.

If, &c. I was n loved
Thou wast n loved
You was or were n loved
He was n loved

We were n loved
Ye were n loved
You were n loved
They were n loved.

Or thus:

If, &c. I were n loved
Thou wert n loved
You were n loved
He were n loved

We were n loved
Ye were n loved
You were n loved
They were n loved

The last form is obsolete in common practice, and not much used by the learned.

Perfect Tense.

If, &c. I have n been loved
Thou hast n been loved
You have n been loved
He has or hath n been loved

We have n been loved
Ye have n been loved
You have n been loved
They have n been loved
Prior-past Tense.

If, &c. I had n been loved
\{ Thou hadst n been loved
\} You had n been loved
He had n been loved

We had n been loved
\{ Ye had n been loved
\} You had n been loved
They had n been loved

Future Tense.

If, &c. I shall, will or should n be loved
\{ Thou shalt, wilt or shouldst n be loved. \} You shall, will or should n be loved
He shall, will or should n be loved

They shall, will or should n be loved.

Prior-future Tense.

If, &c. I shall or should n have been loved
\{ Thou shalt or shouldst n have been loved \} You shall or should n have been loved
He shall or should n have been loved

They shall or should n have been loved.

The future is often elliptical, the auxiliar being omitted. Thus instead of if I shall be loved, &c. are used the following forms.

If, &c. I be n loved
\{ Thou be n loved \} You be n loved
He be n loved

We be n loved
\{ Ye be n loved \} You be n loved
They be n loved.
An exhibition of the verb in the interrogative form, with the sign of the negative.

**Indicative Mode.**

**Present Tense, indefinite.**

Love I n? Love we n?

\{ Lovest thou n? \}

\{ Love you n? \}

Loveth or loves he n? Love they n?

The foregoing form is but little used. The following's the usual mode of asking questions.

Do I n love? Do we n love?

\{ Dost thou n love? \}

\{ Do you n love? \}

Does or doth he n love? Do they n love?

**Definite.**

Am I n loving? Are we n loving?

\{ Art thou n loving? \}

\{ Are you n loving? \}

Is he n loving? Are they n loving?

**Past Tense, indefinite.**

Did I n love? Did we n love?

\{ Didst thou n love? \}

\{ Did you n love? \}

Did he n love? Did they n love?

The other form of this tense, loved he n? is seldom used.

**Definite.**

Was I n loving? Were we n loving?
Wuat thou n loving?  
Was or were you n loving?  
Was he n loving?  
Wor ye n loving?  
Were they n loving?

Perfect Tense, indefinite.

Have I n loved?  
Hast thou n loved?  
Have you n loved?  
Has or hath he n loved?  
Have we n loved?  
Have ye n loved?  
Have you n loved?  
Have they n loved?

Definite.

Have I n been loving?  
Hast thou n been loving?  
Have you n been loving?  
Has or hath he n been loving?  
Have we n been loving?  
Have ye n been loving?  
Have you n been loving?  
Have they n been loving?

Prior-past, indefinite.

Had I n loved?  
Hadst thou n loved?  
Had you n loved?  
Had he n loved?  
Had we n loved?  
Had ye n loved?  
Had you n loved?  
Had they n loved?

Definite.

Had I n been loving?  
Hadst thou n been loving?  
Had you n been loving?  
Had he n been loving?  
Had we n been loving?  
Had ye n been loving?  
Had you n been loving?  
Had they n been loving?

Future Tense, indefinite.

Shall I n love?  
Shalt or wilt thou n love?  
Shall or will you n love?  
Shall or will he n love?  
Shall we n love?  
Shall or will ye n love?  
Shall or will you n love?  
Shall or will they n love?
Definite.

Shall I be loving?
Shalt or wilt thou be loving?
Shall or will you be loving?
Shall or will he be loving?

Shall we be loving?
Shall or will ye be loving?
Shall or will you be loving?
Shall or will they be loving?

Prior-future, indefinite.

Shall I have loved?
Shalt or wilt thou have loved?
Shall or will you have loved?
Shall or will he have loved?

Shall we have loved?
Shall or will ye have loved?
Shall or will you have loved?
Shall or will they have loved?

The definite form of this tense, is little used.

Will, in this tense, is not elegantly used in the first person.

The interrogative form is not used in the imperative mode—a command and a question being incompatible.

It is not necessary to exhibit this form of the verb in the potential mode. Let the learner only be instructed that in interrogative sentences, the nominative follows the verb when alone, or the first auxiliary, when one or more are used; and the sign of negation not, [and generally never], immediately follows the nominative.

Irregular Verbs.

All verbs whose past tense and perfect participle or verbal do not end in ed are deemed irregular. The number of these is about one hundred and seventy-seven. They are of three kinds.

1st. Those whose past tense, and verbal of the perfect are the same as the present; as beat, burst, cast, cost, cut,
hit, hurt, let, put, read, rent, rid, set, shed, shred, shut, slit, split, spread, thrust, sweat, wet. *Wet* has sometimes *wetted*; *heat* sometimes *het*, but the practice is not respectable. *Light* and *quit* have *lit* and *quit* in the past time and verbal, but they are also regular.

2. Verbs whose past time and verbal are alike, but different from the present; as *meet, met; sell, sold.*

3. Verbs whose present and past tenses and verbal are all different; as *know, knew, known.*

A few verbs ending with *ch, ck, x; t, ll, ess,* tho regular, suffer a contraction of *ed* into *i,* as *snatcht* for *snatched,* *checkt* for *checked,* *snapt* for *snapped,* *mxt* for *mixed,* *dwelt* for *dwelled,* past for *passed.* Others have a digraph shortened; as *dream, dreamt, feel, felt, mean, meant,* *sleep, slept, deal, dealt.* In a few, *v* of the radical verb is changed into *f,* as *bereave, bereft, leave, left.*

As some of the past tenses and verbals are obsolete or obsolete, it is deemed proper to set these in separate columns for the information of the student.

**Note 1.**—The old forms of the past tense, sang, spake, sprang, forgat, &c. are here placed among the obsolete words. They are entirely obsolete, in ordinary practice, whether popular or polite; and it seems advisable not to attempt to revive them. In addition to this reason for omitting them, there is one which is not generally understood. The sound of a in these and all other like cases, was originally the broad a or aw; which sound, in the Gothic and Saxon, as in modern Scotch, corresponded nearly with o in spoke, swore. Spake is therefore nearer to the original than spoke, as we now pronounce the vowel a with its first or long sound as in sake.
Note 2. In the use of the past tense and participle of some of these verbs, there is a diversity of practice; some authors retaining those which others have rejected as obsolete. Many words which were in use in the days of Shakespeare and Lord Bacon are now wholly laid aside; others are used only in books, while others are obsolete, being occasionally used; and a few of the old verbs, having lost the verbal character, are used only as attributes. Of the last mentioned, species are fraught, drunken, molten, beholden, shorn, clad, bounden, cloven, which are no longer considered as belonging to the verbs, from which they are derived. Helpen is entirely obsolete. Holpen is entirely obsolete. Pollen, swollen, gotten, and forgotten, are nearly obsolete in common parlance. Wrought is evidently obsolescent; stricken is used only in one phrase, stricken in age or years, which we learn from the bible; but in every other case, is inelegant and pedantic.

Bishop Lowth has attempted to revive the use of many of the obsolescent past tenses and verbals, for which he has, and I think deservedly, incurred the severe animadversions of eminent critics. "Is it not surprising, says Campbell on Rhetoric, b. 2. ch. 2. that one of Lowth's penetration should think a single person entitled to revive a form of inflection in a particular word, which had been rejected by all good writers of every denomination, for more than a hundred and fifty years." This writer declares what Lowth has advanced on the use of the past tense and participle, to be inconsistent with the very first principles of grammar. He observes justly, that authority is everything in language, and that this authority consists in reputable, national, present usage.

Independent of authority however, there are substantial reasons in the language itself for laying aside the verbals ending with ed, and for removing the differences between the past time and verbal. In opposition to the opinion of Lowth, who regrets that our language has so few inflections, and maintains that we should preserve all we have, I think it capable of demonstration that the differences between the past time and verbal or participle of the past tense of our irregular verbs, is one of the greatest inconveniences in the language. If we used personal terminations to form our modes and tenses like the Greeks, it would be desirable that they should be carefully retained. But as we have no more than about half a dozen different terminations, and are therefore obliged to form our modes and tenses by means of auxiliars, the combination of these forms a part of the business of learning the language, which is extremely difficult and perplexing to foreigners. Even the natives of Scotland and Ireland do not always surmount the difficulty. This difficulty is very much augmented by the difference between the past tense and the verbal. To remove this difference, in words in which popular usage has given a lead, is to obviate, in a degree, this inconvenience. This is recommended by another circumstance—it will so far reduce our irregular verbs to an analogy with the regular, whose past tense and verbal of the perfect are alike.
In a number of words, the dropping of \( n \) in the participle, will make a convenient distinction between the verbal and the attribute; for in the latter, we always retain \( en \)—we always say a written treatise, a spoken language, a hidden mystery—though the best authors write, a "mystery hid from ages;" "the language spoke in Bengal."

Besides, whenever we observe a tendency in a nation to contract words, we may be assured that the contraction is found to be convenient, and is therefore to be countenanced. Indeed if I mistake not, we are indebted to such contractions for many real improvements; as write from gewrite; slain from ofslagen; fastened from gefasted; men from monman; holy from haligan, &c. And as a general remark, we may be assured that no language ever suffers the loss of a useful word or syllable. If a word or syllable is ever laid aside in national practice, it must be because it is not wanted, or because it is harsh and inconvenient in use, and a word or syllable more consonant to the general taste of a nation or state of society, is substituted.

Such is the fact with our participles in \( en \): the \( e \) being suppressed in pronunciation, we have the words spoken, writtn, holen, in actual practice. Nothing can be more weak, inefficient and disagreeable than this nasal sound of the half vowel—it is disagreeable in prose, feeble in verse, and in music, intolerable. Were it possible to banish every sound of this kind from the language, the change would be desirable. At any rate, when people in general have laid aside any of these sounds, writers, who value the beauties of language, should be the last to revive them.

We need not however trouble ourselves to discuss the utility or propriety of retaining these participles; for it is a fact as curious as important, that no word, syllable or phrase entirely obsolete in common usage, was ever yet recalled into popular use. On the other hand, whatever is thus obsolete among the body of a people, is ultimately neglected by the learned. However the learned, therefore may pride themselves in their superior attainments, and in their right to control the usages of a nation, the history of languages will evince, that they must at last be borne away upon the current of popular practice.

Men of letters may revolt at this suggestion; but if they will attend to the history of our own language, they will find the fact to be as here stated. It is commonly supposed that the tendency of this practice of unlettered men is to corrupt the language. But the fact is directly the reverse. I am prepared to prove, were it consistent with the nature of this work, that nineteen twentieths of all the corruptions of our language, for five hundred years past, have been introduced by authors—men who have made alterations in particular idioms which they did not understand. The same remark is applicable to the orthography and pronunciation. The tendency of unlettered men is to uniformity—to analogy; and so strong is this disposition, that the common people have actually
A PHILOSOPHICAL AND
converted some of our irregular verbs into regular ones. It is to unlettered people, that we owe the disuse of holpen, bounden, sitten, and the use of the regular participles swelled, helped, worked, in the place of the ancient ones. This popular tendency is not to be condemned and disregarded, as some of the learned affect to do, for it is governed by the natural, primary principles of all languages, to which we owe all their regularity and all their melody; viz. a love of uniformity in words of a like character, and a preference of an easy natural pronunciation, and a desire to express the most ideas with the smallest number of words and syllables. It is a fortunate thing for language that these natural principles generally prevail over arbitrary and artificial rules.

Defective Verbs.

Verbs which want the past time or verbal, are deemed defective. Of these we have very few. The auxiliaries may, can, will, shall, must, having no participle, belong to this class. Ought is used in the present and past tenses only, with the regular inflection of the second person only—"I ought, thou oughtest, he ought, We, you, they ought. Quoth is wholly obsolete, except in poetry and burlesque. It has no inflection, and is used chiefly in the third person, with the nominative following it, quoth he.

Wit, to know, is obsolete, except in the radical form, to introduce an explanation or enumeration of particulars; as "There are seven persons, to wit, four men and three women." It is found in one passage of scripture; "Moreover, brethren, we do you to wit of the grace of God." 2 Cor. 8. 1. "We make you to know." Here do is used in an obsolete sense. Wot is frequently used in scripture, in the present tense; "I wot not who hath done this thing." Gen. 21. "My master wotteth not what is with me in the house." 39. 8. I find it thus used in the Saxon. Wot is not only the past tense, but a dialectical variation of the present.

Wist, the past tense of wis, to think or imagin, is now wholly obsolete, tho frequently used in the vulgar version of the bible. It is very desirable that these and a few other obsolete words and phrases in that version should be ex-
punged, for some of them are actually unintelligible to most readers. Some words are also used in a sense which is no longer attached to them, and they are not understood.

Modifiers.

Modifiers, words which are usually comprehended under the term adverb, are a secondary part of speech. Their uses are to enlarge, restrain, limit, define, and in short, to modify the sense of other words.

Modifiers may be classed according to their several uses.

1. Those which qualify the actions expressed by verbs and verbals; as "a good man lives piously;" "a room is elegantly furnished." Here piously denotes the manner of living—elegantly, denotes the manner of being furnished. The words of this kind, which are very numerous, are really compound attributes, formed by annexing the attribute like to any other attribute—pious-like, elegant-like. The phrases mentioned, when expressed according to the primitive idiom, stand thus; "he lives pious-like;" "a room elegant-like furnished." So that the most numerous class of modifiers of verbs are really attributes; but being used as the qualifiers of verbs and other attributes, and not to express the qualities of names, they may well take a different appellation.

In this class may be ranked a number of other words whose origin is less known or more remote; as when, soon, then, where, whence, hence, and many others, whose use is to modify verbs.

2. Another class of modifiers are words usually called prepositions, used with verbs to vary their signification; for which purpose they generally follow them in construction; as to fall on, give out, bear with, cast up; or they are prefixed and become a part of the word; as overcome, underlay. In these uses, these words modify, or change the sense of the verb; and when prefixed, are united with the verb in orthography.
3. The other class of modifiers consists of old Saxon verbs or other words: as if, tho,* whether, unless, etc., etc., whose use is to give a conditional or hypothetical form to sentences; and if a distinction of names should be thought useful, they may be called modifiers of sentences. They have been most improperly classed with conjunctions.

A few modifiers admit the terminations of comparison; as soon, sooner, soonest; often, oftener, oftencost. Most of those which end in ly may be compared by more and most, less and least; as more justly, most excellently; less honestly, least criminally.

Note....The numerous distinctions of modifiers into those of time, place and quantity, causal, illative, adversative, &c. seems to be more perplexing than useful. We might as well make the definition of every word in our dictionaries the foundation of a class, as to recognize the divisions of this species of words, with which the ingenuity of authors has filled our grammars.

Prepositions.

Prepositions, so called from their being placed before other words, serve to connect words and show the relation between them; or to show the condition of things. Thus a man of benevolence, denotes a man who possesses benevolence. Christ was crucified between two thieves. Receive the book from John and give it to Thomas.

The prepositions most common, are, *to, for, by, of, in, into, on, upon, among, between, betwixt, up, over, under, beneath, against, from, out, with, through, at, towards, before, behind, after, without, across.

We have a number of particles, which serve to vary or modify the words to which they are prefixed, and which are sometimes called inseparable prepositions, because they are never used, but as parts of other words—such are a, be, con, mis, fire, re, sub, in abide, come, conjoin, mistake, prefix, return, subjoin, &c. These may be called prefixes.

* Tho is usually written though; but improperly; and probably by confounding tho with tho, a distinct word, nearly obsolete.
Connectives.

Connectives are words which unite words and sentences in construction, joining two or more simple sentences into one compound one, and continuing the sentence at the pleasure of the writer or speaker. They also begin sentences after a full period, manifesting some relation between sentences in the general tenor of discourse.

The connectives of most general use, are and, or, either, nor, neither, but, than. To which may be added because.

And is supposed to denote an addition; as "The book is worth four shillings add sixpence." That is, it is worth four shillings, add sixpence, or with sixpence added: "John resides at New-York, and Thomas, at Boston." That is, John resides at New-York, add, [add this which follows] Thomas resides at Boston. From the great use of this connective in joining words of which the same thing is affirmed or predicated, it may be justly called the copulative by way of eminence.

The distinguishing use of the connective is to save the repetition of words; for this sentence "John, Thomas and Peter reside at York," contains three simple sentences; "John resides at York,"—"Thomas resides at York,"—"Peter resides at York;" which are all combined into one, with a single verb and predicate, by means of the copulative.

Either and or have been already explained under the head of substitutes; for in strictness they are the representatives of sentences or words; but as or has totally lost that

* Mr. H. Tooke supposes and to be a contraction of an-ad, an, give and ad congeries, a mass, pile or heap. This etymology is not sufficiently probable; nor can I find one that is. An, in the Celtic, is equivalent to the English the or that; and perhaps an may be united to the radical of the verb add—in which case, the sense is, add that—add what follows. I find no small part of English words and many of our idioms are of Celtic original. But the origin of and is obscure; and that which is here offered is mere conjecture.
character, both these words will be here considered as con­nectives. Their use is to express an alternative, and I shall call them *alternatives*. Thus “Either John or Henry will be at the exchange,” is an alternative sentence; the verb or predicate belonging to one or the other, but not to both; and whatever may be the number of names or propositions thus joined by *or*, the verb and predicate belong to one only.

One very common use of *or*, is to join to a word or sentence, something added by way of explanation or definition. Thus “No disease of the mind can more fatally disable it from benevolence, than ill-humor or peevishness.” *Rambler, No. 74.* Here *peevishness* is not intended as a distinct thing from *ill-humor*, but as another term for the same idea. In this case, *or* expresses only an *alternative of words*, and not of signification.

*Neither* and *nor* are mere contractions of *ne-either*, the Saxon for *not either*, and of *ne or*, or *ne other.* As *either* and *or* are affirmative of one or other of the particulars named, so *neither* and *nor* are negative of all the particulars. Thus “For I am persuaded that *neither* death, *nor* life, *nor* angels, *nor* principalities, *nor* powers, *nor* things present, *nor* things to come, *nor* height, *nor* depth, *nor* any other creature shall be able to separate us from the love of God.” *Rom. 8. 38.* Here *neither* is in fact a substitute for each of the following particulars—all which it denies to be able to effect a certain purpose—*not either* of these which follow shall separate us from the love of God. It is laid down as a rule in our grammars, that *nor* must always answer to *neither*; but this is a great mistake, for the negation of *neither*, not either, extends to every one of the following alternatives. But *nor* is more generally used, and in many cases, as in the passage just recited, is far the most emphatical.

*Neither* and *nor* may be called *negative alternatives*.

*But* is used for two Saxon words, originally by mistake, but now by established custom; *bet* or *bote*, the radical of

---

* In some cases pronounced *nither* or *nouther*, as it was formerly written.
our modern words better, boot, and denoting sufficiency, compensation, more, further, or something additional, by way of amendment; and butan or butan, equivalent to without or except.

In the former sense, we have the word in this sentence; "John resides at York, but Thomas resides at Bristol." The primitive sense here is, John resides at York; more, add or supply, Thomas resides at Bristol. It does not signify opposition, as is usually supposed, but some addition to the sense of what goes before.

In the latter sense, or that of beout, it is used in this passage "He hath not grieved me but in part." 2 Cor. 2. 5. that is, "He hath not grieved me, except in part." The first assertion is a complete negation; the word but, (butan) introduces an exception.—"Nothing, but true religion, can give us peace in death." Here also is a complete negation, with a saving introduced by but. Nothing, except true religion.

These were the only primitive uses of but, until by means of a mistake, a third sense was added, which is, that of only. Not knowing the origin and true meaning of but, authors omitted the negation in certain phrases where it was essential to a true construction; as in the following passages "Our light affliction which is but for a moment." 2 Cor. 4. "If they kill us, we shall but die." 2 Kings. 7. The but, in these passages, is buton, be out, except; and according to the true original sense, not should precede, to give the sentence a negative turn; "Our light affliction is not, but (except) for a moment." "We shall not, but die." As they now stand, they would in strictness signify, Our light affliction is except for a moment—We can except die, which would not be sense. To correct the sense, and repair the breach made in the true English idiom, by this mistake, we must give but a new sense, equivalent to only. Thus we are obliged to patch and mend, to prevent the mischiefs of innovation.

The history of this word but should be, as Johnson expresses the idea, "a guide to reformers, and a terror to innovators." The first blunder or innovation blended two words of distinct meanings into one, in orthography and
pronunciation. Then the sense and etymology being obscured, authors proceeded to a further change, and suppressed the negation, which was essential to the word. We have now therefore one word with three different and unallied meanings; and to these may be reduced the whole of Johnson’s eighteen definitions of but.

Let us however trace the mischief of this change a little further. As the word but is now used, a sentence may have the same meaning, with or without the negation. For example; “he hath not grieved me, but in part”—and “he hath grieved me, but in part,” have, according to our present use of but, precisely the same meaning. Or compare different passages of scripture, as they now stand in our bibles.

He hath not grieved me, but in part.

Our light affliction is but for a moment.

This however is not all; for the innovation being directed neither by knowledge nor judgment, is not extended to all cases, and in a large proportion of phrases to which but belongs, it is used in its original sense with a preceding negation, especially with nothing and none. “There is none good, but one, that is God.” Matt. 19. 17. This is correct—there is none good, except one, that is God. “He saw a fig-tree in the way, and found nothing thereon but leaves only.” Matt. 21. 19. This is also correct—“he found nothing, except leaves,” the only is redundant. “It amounts to no more but this.” Locke. Und. b. 1. 2. This is a correct English phrase; “it amounts to no more, except this,” but it is nearly obsolete.

Hence the propriety of these phrases; “They could not, but be known before.” Locke. 1. 2. “The reader may be, nay cannot chuse but be very fallible in the understanding of it.” Locke. 3. 9. Here but is used in its true sense—they could not, except this, be known before. That is, the contrary was not possible. The other phrase is frequently found in Shakespeare and other old writers, but is now obsolete. They cannot chuse but—that is, they have no choice, power or alternative, except to be very fallible.
But is called in our grammars, a *disjunctive conjunction*, connecting sentences, but expressing opposition in the sense. To illustrate the use of this word which *joins* and *disjoins* at the same time, Lowth gives this example; “You and I rode to London, *but* Peter staid at home.”—Here the Bishop supposed the *but* to express an opposition in the sense. But let *but* be omitted, and what difference will the omission make in the sense? “You and I rode to London, Peter staid at home.” Is the opposition in the sense less clearly marked than when the conjunction is used? By no means. And the truth is, that the opposition in the sense, when there is any, is never expressed by the connective at all, but always by the following sentence or phrase: “They have mouths, but they speak not; eyes have they, but see not.” *Psalm* 115.5. Let *but* be omitted—“They have mouths, they speak not; eyes have they, they see not.” The omission of the connective makes not the smallest alteration in the sense, so far as opposition or difference of idea in the members of the sentence is concerned. Indeed the Bishop is most unfortunate in the example selected to illustrate his rule; for the copulative *and* may be used for *but*, without the least alteration of the sense—“You and I rode to London, *and* Peter staid at home.” In this sentence the opposition is as completely expressed as if *but* was used; which proves that the opposition in the sense has no dependence on the connective.

Nor is it true that an opposition in the sense always follows *but*; “Man shall not live by bread alone, *but* by every word which proceedeth out of the mouth of God.” *Mat.* 4. 4. Here the last clause expresses no opposition, but merely an additional fact. The true sense of *but* when used for *but*, is *suply, more, further, something additional, to complete the sense*—it may be in opposition to what has preceded, or in continuation only. In general however, the word *but* is appropriately used before a clause of a sentence, intended to introduce a new and somewhat different idea, by way of modifying the sense of the preceding clause. This use is very naturally deduced from the original sense of the word, something further which *is to make complete or qualify what has preceded.*
That is a connective of comparison; as “John is taller than Peter.”

Because, is a mere compound of the verb be and cause—the cause be or is—or let the cause be. “It is the case of some to contrive some false periods of business, because they may seem men of despatch.” Bacon of Despatch. See also Apoth. 7. 6. This is a correct English idiom, Dr. Lowth’s criticism to the contrary notwithstanding, but it is now obsolete.

Exclamations.

Exclamations are sounds uttered to express passions and emotions; usually those which are violent or sudden. They are called interjections, words thrown in between the parts of a sentence. But this is not always the fact, and the name is insignificant. The more appropriate name is, exclamations; as they are mere irregular sounds, uttered as passion dictates and not subject to rules.

A few of these sounds however become the customary modes of expressing particular passions and feelings in every nation. Thus in English, joy and surprise and grief are expressed by oh, uttered with a different tone and countenance. Alas expresses grief or great sorrow—fish, fushare, express contempt. Sometimes verbs, names and attributes are uttered by way of exclamation, in a detached manner; as hail! Welcome! Bless me! Gracious heavens!

In two or three instances, exclamations are followed by names and substitutes in the nominative and objective—as O thou in the nominative—oh me in the objective. Sometimes that follows O, expressing a wish—“O that the Lord would guide my ways.” But in all such cases, we may consider wish or some other verb to be understood.
However numerous may be the words in a language, the number of radical words is small. Most words are formed from others by addition of certain words or terminating syllables, which were originally distinct words, but which have lost their distinct character, and are now used only in combination with other words. Thus *er in *lover, is a contraction of *wer, a Saxon word denoting *man, [the Latin *vir;] *ness is from the same root as *nasus, nose, promontory, and denotes state or condition; *ly is an abbreviation of *like or *liche; *fy is from *feo, to make, &c.

Most of the English derivatives fall under the following heads:

1. Names formed from names, or more generally from verbs, by the addition of *r, *er or *or, denoting an agent; as *lover, *hater, *assignor, *flatterer, from *love, *hate, *assign, *flatter.
2. Names converted into verbs by the prefix *to, as from *love, to *love; from *fear, to *fear, and to *hope, to *cloud, to *water, from the nouns.
3. Attributes converted into verbs in the same manner; as to *lame, to *cool, to *warm, from *lame, *cool, *warm.
4. Verbs formed from names and attributes by the termination *ize; as *method, *methodize; *system, *systemize; *moral, *moralize. When the primitive ends with a vowel, the consonant *t is prefixed to the termination; as *stigma, *stigmatize.
5. Verbs formed from names and attributes by the addition of *en or *n; as *lengthen, *widen, from *length, *wide.
6. Verbs formed by *fy; as *brutify, *stratify, from *brute, *stratum.
7. Names formed from attributes by *ness; as *goodness, from *good; *graciousness, from *gracious.
8. Names formed by *dom* and *ric*, denoting jurisdiction; as kingdom, bishopric, from king and bishop. *Dom* and *ric*, are nouns denoting jurisdiction or territory.

9. Names formed by *hood* and *ship*, denoting state or condition; as manhood, lordship, from man, lord.

10. Names ending in *ment* and *age*, from the French, denoting state or act; as commandment, parentage, from command, parent.

11. Names in *er*, or and *ee*, used by way of opposition, the former denoting the agent, the latter the receiver or person to whom an act is performed; as assignor, assignee; indorser, indorsee.

12. Attributes formed from names by the addition of *y*; as healthy, from health; pithy, from pith; or *ly* added to the name; as stately, from state. *Ly* is a contraction of like.

13. Attributes formed from names by the addition of *ful*; as hopeful, from hope.

14. Attributes formed from names or verbs by *ible* or *able*; as payable, from pay; creditable, from credit; compressible, from compress. *Able* denotes power or capacity.

15. Attributes formed from names or attributes by *ish*; as whitish, from white; blackish, from black; wagish, from wag.

16. Attributes formed from names by *less*; as fatherless, from father, noting destitution.

17. Attributes formed from names by *ous*; as famous, from fame, gracious, from grace.

18. Attributes formed by adding *some* to names; as delightful, from delight.

19. Modifiers formed from attributes by *ly*, as sweetly, from sweet.

20. Names to express females formed by adding *ess* to the masculine gender; as heiress, from heir. *Ess* is from the Hebrew *essa*, a female.
21. Names ending in *ly*, some directly from the Latin, others formed from attributes; as responsibility, from *responsible*; contractility, from *contractile*; probity, from *probitas*.

22. Attributes formed by adding *al* to names; as national, from nation.

23. Attributes ending in *ic* mostly from the Latin, or French, but some of them by the addition of *ic* to a name; as balsamic, from balsam; sulphuric, from sulphur.

24. Names formed by *ate* to denote the union of substances in salts; as carbonate, in the chemical nomenclature denotes carbonic acid combined with another body.

25. Names ending in *ite*, from other names and denoting salts formed by the union of acids with other bodies, as sulphite, from sulphur.

26. Names ending in *ret* formed from other names, and denoting a substance combined with an alkaline, earthy or metallic base; as sulphuret, carburet, from sulphur and carbon.

27. Names formed from other names by adding *cy*; as ensigncy, captaincy, from ensign, captain.

Words are also formed by prefixing certain syllables and words, some of them significant, by themselves; others never used but in composition: as re, fire, con, mis, sub, super; and great numbers are formed by the union of two words; as bed-room, ink-stand, pen-knife.

**Syntax.**

Syntax teaches the rules to be observed in the construction of sentences.

A sentence is a number of words arranged in due order, and forming a complete affirmation or proposition. In philosophical language, a sentence consists of a subject and a predicate, connected by an affirmation. Thus "*God is*
omnipotent," is a complete proposition or sentence, composed of God, the subject, omnipotent, the predicate or thing affirmed, connected by the verb is, which forms the affirmation.

The predicate is often included in the verb; as "the sun shines."

A simple sentence then contains one subject and one personal verb; that is the name and the verb; and without these, no proposition can be formed.

A compound sentence consists of two or more simple sentences, joined by connectives. The divisions of a compound sentence may be called members or clauses.

Sentences are declaratory, as I am writing; the wind blows—imperative, as go, retire, be quiet—interrogative, as where am I? who art thou?—or conditional, as if he should arrive.

The rules for the due construction of sentences fall under three heads. First, concord or agreement—Second, government—Third, arrangement and punctuation.

In agreement, the name or noun is the controlling word, as it carries with it the verb, the substitute and the attribute. In government, the verb is the controlling word; but names and prepositions have their share of influence also.

Agreement or Concord.

RULE 1.

A verb must agree with its nominative in number and person.

Examples.

In solemn style. "Thou hast loved righteousness."  
Heb. 1.9.

"Thou madest man a little lower than the angels, and crownedst him with glory and honor."  
Heb. 2.7.

"Thou shalt not steal." Commandment.
"Art thou called, being a servant?" 1 Cor. 7. 21.
"But ye are washed; but ye are sanctified."
1 Cor. 6. 11.
"Know ye not that we shall judge angels?"
1 Cor. 1. 2.
"Do ye not know that the saints shall judge the world?"
1 Cor. 1. 2.

In familiar language, "This is the word of promise."
Rom. 9. 9.

I write; John reads; Newton was the first of astronomers; we are astonished at his discoveries; are you pleased with the new chemistry? Emilia has an elegant form.

NOTE. The nominative to a verb is found by young learners, by asking who or what does what is affirmed. "Eumenes, a young man of great abilities, inherited a large estate from his father. His father, harrassed with competitions, and perplexed with a multiplicity of business, recommended the quiet of a private station." Let the question be asked, who inherited a large estate? The answer is Eumenes, which is the nominative to the verb inherited. Who recommended the quiet of a private station? His father, which is therefore the nominative to the verb recommended.

NOTE 2. Let the following rules be observed respecting the position of the nominative.

I. The nominative usually precedes the verb in declaratory phrases; as "God created the world;" "the law is a rule of right." But the nominative may be separated from its verb, by a member of a period; as "Liberty, say the fanatic favorers of popular power, can only be found in a democracy." Anarch. ch. 62.

II. The nominative often follows an intransitive verb, for such a verb can have no object after it, and that position of the nominative creates no ambiguity; thus, "Above it stood the Seraphims." Isa. 6. "Gradual sinks the breeze. Thompson."
III. When the verb is preceded by here, there, hence, thence, then, thus, yet, so, nor, neither, such, the same, herein, therein, wherein, and perhaps by some other words, the nominative may follow the verb, especially be; as "here are five men;" "there was a man sent from God;" "hence arise wars;" "thence proceed our vicious habits;" "then came the scribes and pharisees;" "thus saith the Lord;" "yet required not I bread of the governor." Neh. 5. 18. "So panteth my soul after thee, O Lord." Psalm 42. "Neither hath this man sinned nor his parents." John 9. "Such were the facts;" "the same was the fact." "Herein consists the excellence of the English government." Blacks. Com. b. 1.

IV. When an emphatical attribute introduces a sentence, the nominative may follow the verb; as "Great is the Lord, glorious are his works, and happy is the man who has an interest in his favor."

V. In certain phrases, which are conditional or hypothetical, the sign of the condition may be omitted, and the nominative placed after the auxiliary; as "Did he but know my anxiety; for, if he did but know—" Had I known the fact," for, if I had known—" Would they consent," for, if they would, &c.

VI. When the words whose, his, their, her, mine, your, &c. precede the verb with a governing word, the nominative may follow the verb; as "Out of whose modifications have been made most complex modes." Locke 2. 22. 10.

VII. In interrogative sentences, the nominative follows the verb when alone, or the first auxiliary; as believest thou? Will he consent? Has he been promoted? The nominative also follows the verb in the imperative mode; as go thou, "be ye warmed and filled." But after a single verb, the nominative is commonly omitted; as arise, &c.
PRACTICAL GRAMMAR.

Note 3. ... In poetry, the nominative is often omitted in interrogative sentences, in cases where in prose the omission would be improper; as “Lives there who loves his pain.” Milton. That is, lives there a man or person.

Note 4. ... In the answer to a question, the whole sentence is usually omitted, except the name, which is the principal subject of the interrogation; as “Who made the chief discoveries concerning vapor?” Black. “Whose theory of respiration is generally received?” Crawford’s.

Note 5. ... In poetry, the verb in certain phrases is omitted, chiefly such verbs as express an address or answer; as “To whom the monarch”—that is, said or replied.

Note 6. ... When a verb is placed between two nominatives in different numbers, it may agree with either; but generally is made to agree with the first, and this may be considered as preferable; as “His meat was locusts and wild honey.” It [piracy] is the remains of the manners of ancient Greece.” Anarch. ch. 36.

Note 7. ... Verbs follow the connective than, without a nominative expressed; as “Not that anything occurs in consequence of our late loss, more affective than was to be expected.” Life of Chop. Lett. 62.

He felt himself addicted to philosophical speculations, with more ardor than consisted with the duties of a Roman and a senator.” Murphy’s Tacitus. 4. 57.

All words that lead the mind to any other ideas, than are supposed really to exist in that thing.” Locke. 2. 25.

These forms of expression seem to be elliptical; “more affective than that which was to be expected.” That which or those which will generally supply the ellipsis.

Note 8. ... We sometimes see a nominative introducing a sentence, the sense suddenly interrupted, and the nominative left without its intended verb; as “The name of a procession; what a great mixture of independent ideas of persons, habits, tapers, orders, motions, sounds does it contain,” &c. Locke 3. 5,13. This form of expression is often very striking in animated discourse. The first words, being the subject of the discourse and important, are made to usher in the sentence, to invite attention; and the mind of the speaker, in the fervor of animation, quitting the trammels of a formal arrangement, rushes forward to a description of the thing mentioned, and presents the more striking ideas in the form of exclamation.
We have one phrase in which the personal substitute "me" precedes a verb in the third person—methinks, methought. Anciently "him" was used in like manner—him thuhte, he thought. Alf. Orosius. And names also; as "tham halgan Gast was gethuht." It thought (or seemed good) to the Holy Ghost. Lamb. Sax. Lat. 21. "Him, me and tham" are here in the Saxon dative case.

RULE II.

A name, a nominative case or a sentence joined with a verbal or participle of the present tense, may stand in construction without a verb, forming the Case or Clause independent; as "Jesus had conveyed himself away, a multitude being in that place." John 5. 13. Here multitude, the name, joined with being, stands without a verb.

"By memory we conceive heat or light, yellow or sweet, the object being removed." Locke 2. 10.

"I have, notwithstanding this discouragement, attempted a dictionary of the English language." Johnson's Preface.

"Whatever substance begins to exist, it must, during its existence, necessarily be the same." Locke 2. 27. 28.

"The penalty shall be fine and imprisonment, any law or custom to the contrary notwithstanding."

The latter phraseology is peculiar to the technical law style. In no other case, does notwithstanding follow the sentence. But this position makes no difference in the true construction, which is, "any law or custom to the contrary not opposing"—the real clause independent.

It is very common, when this verbal agrees with a number of words, or a whole clause, to omit the whole except

*During* is the verbal of an old verb now obsolete; but its derivatives endure and enduring are in use. *During* is usually called a preposition; but no consideration can justify the practice—it retains its true verbal sense. Equally erroneous is the classification of notwithstanding, with conjunctions. The two words, not and notwithstanding are joined indeed without reason; but the resolution of sentences in which this compound is found, demand a restoration of it to its true place and character.
the verbal; and in this use of notwithstanding, we have a striking proof of the value of abbreviations in language. For example; "Moses said, let no man leave of it till the morning. Notwithstanding, they hearkened not unto Moses." Ex. 16. 20. Here notwithstanding stands without the clause to which it belongs; to complete the sense in words, it would be necessary to repeat the whole preceding clause or the substance of it—"Moses said, let no man leave of it until the morning. Notwithstanding this command of Moses, or notwithstanding Moses said that which has been recited, they hearkened not unto Moses."

"Folly meets with success in this world; but it is true, notwithstanding, that it labors under disadvantages." Por- teus. Lecture 13. This passage at length would read thus—"Folly meets with success in the world; but it is true, notwithstanding folly meets with success in the world, that it labors under disadvantages." By supplying what is really omitted, yet perfectly well understood, we learn the true construction; so that notwithstanding is a verbal always agreeing with a word or clause, expressed or understood, and forming the independent clause; and by a customary ellipsis, it stands alone in the place of that clause.

Such is its general use in the translation of the scriptures. In the following passage, the sentence is expressed—"Notwithstanding I have spoken unto you." Jer. 35. That is, "This fact, I have spoken unto you, not opposing or preventing." Or in other words, "In opposition to this fact."

It is also very common to use a substitute this, that, which or what, for the whole sentence; as "Bodies which have no taste, and no power of affecting the skin, may, notwithstanding this, have no taste, and no power to affect the skin; act upon organs which are more delicate." Fourcroy. Translation.

I have included in books, the words for which this is a substitute.

"To account for the misery that men bring on themselves, notwithstanding that, they do all in earnest pursue happiness, we must consider how things come to be represented to our desires under deceitful appearances."

Locke 2. 21. 61.
A PHILOSOPHICAL AND

Here *that*, a substitute, is used, and the sentence also for which it is a substitute. This is correct English, but it is usual to omit the substitute, when the sentence is expressed—"Notwithstanding they do all in earnest pursue happiness."

It is not uncommon to omit the verbal of the present tense, when a verbal of the perfect tense is employed—"The son of God, while clothed in flesh, was subject to all the frailties and inconveniences of human nature, *sin excepted.*" Locke. 3. 9. That is, *sin being excepted*; the clause independent.

This omission is more frequent when the verbal *provided* is used, than in any other case. "In the one case, *provided the facts on which it is founded be sufficiently numerous,* the conclusion is said to be morally certain." Campbell on Rhet. 1. 114. Here *being* is omitted, and the whole clause in italics is independent—"The facts on which it is founded are sufficiently numerous, that being provided, the conclusion is morally certain. *Provided,* in such cases, is equivalent to *given, admitted or supposed.*"

"In mathematical reasoning, *provided you are ascertained of the regular procedure of the mind,* to affirm that the conclusion is false, implies a contradiction." ibm. 134.

In this phrase, *that* may follow *provided*—*provided that,* you are ascertained, &c. as in the case of *notwithstanding,* before mentioned—*that* being a definitive substitute, pointing to the following sentence—*that which follows being provided.*

To this construction must be referred the old verbal *since* [sithence, sith, sin, for *seen*] from the Saxon verb *to see.* "The Lord hath blessed thee *since my coming.*" Gen. 30. 30. That is, *my coming being seen.* This was a Saxon expression to fix the time of an event, or its beginning and continuation, which were represented by the idea of *seeing* it. "As he spake by the mouth of his holy

*Provided that,* says Johnson, is an adverbial expression, and we sometimes see *provided* numbered among the conjunctions, as its correspondent word is in French. What strange work has been made with Grammar!
prophets, which have been, since the world began.” Luke 1. 70. That is, “the world began being seen”—that fact being in existence.∗

It is not uncommon for authors to carry the practice of abridging discourse so far as to obscure the common regular construction. An instance frequently occurs in the omission both of the nominative and the verbal, in the case independent. For example: “Conscious of his own weight and importance, his conduct in parliament would be directed by nothing but the constitutional duty of a peer.” Junius. Let. 19. Here is no noun expressed to which conscious can be referred. We are therefore to supply the necessary words, to complete the construction—“He being conscious”—forming the clause independent.

RULE III.

A sentence, a number of words or a clause of a sentence may be the nominative to a verb, in which case the verb is always in the third person of the singular number; as “All that is in a man’s power in this case, is, only to observe what the ideas are which take their turns in the understanding.” Locke 2. 14. Here the whole clause in italics is the nominative to is.

“To attack vices in the abstract, without touching persons, may be safe fighting indeed, but it is fighting with shadows.” Pope. Let. 48.

“I deny that men’s coming to the use of reason, is the time of their discovery.” Locke 1. 2.

“That any thing can exist, without existing in space, is to my mind incomprehensible.” Darwin. Zoon. sect. 14. Here the definitive substitute may be transferred to a place next before the verb—“Any thing can exist, without existing in space,” that [whole proposition] is incomprehensible.

∗ This word has also been thrown into the common sink of adverbs and prepositions.
No species of sentences fall under this rule more frequently than those which begin with the radical verb. "To show how the understanding proceeds herein, is the design of the following discourse." *Locke 1. 4.*

This sentence may be inverted without the change of a single word. "The design of the following discourse is to show," &c.

"To fear no eye and to suspect no tongue, is the great prerogative of innocence." *Rambler.* This sentence may be inverted; but according to our idiom, the substitute it would precede the verb—"it is the great prerogative of innocence to fear," &c. The sentence thus inverted would be good English without the substitute—"The great prerogative of innocence is"—but this alters the sense, and limits the prerogatives of innocence to the one mentioned. By changing the to a, this inconvenience would be remedied; but in either case the force of the sentiment would be impaired.

"Our idea of eternity can be nothing but an infinite succession of moments of duration." *Locke 2. 17. 16.* "The notion they have of duration, forces them to conceive," &c. *ibid.* In these passages, we observe the nominative or subject of the affirmation consists of several words; for it is not simply an idea which is affirmed to be nothing but an infinite succession of moments of duration; but our idea of eternity. In like manner, attributes and other words often make an essential part of the nominative. "A wise son maketh a glad father; but a foolish son is the heaviness of his mother." Abstract the name from its attribute, and the propositions cannot always be true—"A son maketh a glad father"—a son is the heaviness of his mother." "He that gathereth in summer is a wise son." Here the predicate belongs to the person described—"He that gathereth in summer." Take away the description, *that gathereth in summer,* and the affirmation ceases to be true or becomes inapplicable.

These sentences or clauses thus constituting the subject of an affirmation, may be termed nominative sentences.
RULE IV.

The radical verb may be the nominative to a personal verb; as "to see is desirable; to die is the inevitable lot of men." Sometimes an attribute is joined with the radical verb; as "to be blind is calamitous." In this case the attribute has no name expressed to which it refers. The proposition is abstract, and applicable to any human being, but not applied to any.

RULE V.

In some cases, the imperative verb is used without a definite nominative; as "I will not take any thing that is thine—save only that which the young men have eaten." Gen. 14. 24.

"Israel burned none, save Hazor only." Josh. 11. 13.

"I would that all—were such as I am, except these bonds." Acts 26. 29.

"Our ideas are movements of the nerves of sense, as of the optic nerve in recollecting visible ideas, suppose of a triangular piece of ivory." Darwin. Zoon. Lect. 39.

This use of certain verbs in the imperative is very frequent, and there is a peculiar felicity in being thus able to use a verb in its true sense and with its proper object, without specifying a nominative; for the verb is thus left applicable to the first, second or third person. I may save or except, or you may except, or we may suppose. If we examine these sentences, we shall be convinced of the propriety of the idiom; for the ideas require no application to any person whatever.
RULE VI.

When the same thing is affirmed or predicated of two or more subjects, in the singular number; the nominatives are joined by the copulative and, with a verb agreeing with them in the plural number; as "John and Thomas and Peter reside at Oxford." In this sentence, residence at Oxford is a predicate common to three persons—and instead of three affirmations—John resides at Oxford, Thomas resides at Oxford, Peter resides at Oxford; the three names are joined by and, and one verb in the plural applied to the whole number.

"Reason and truth constitute intellectual gold, which defies destruction." Johnson. "Why are whiteness and coldness in snow?" Locke. "Your lot and mine, in this respect, have been very different." Comp. Let. 38.

In like manner, names and attributes representing all the subjects or particulars connected by and, must be in the plural number; as "Plato and Aristotle were learned men; these philosophers founded the academic and peripatetic schools." "The most able generals of the last century were Frederick of Prussia, the Duke of Marlborough and Prince Eugene." "We look on the whiteness and softness, produced in the wax, not as qualities in the sun, but effects produced by its powers." Locke 2. 8.

When three or more particulars are enumerated, the connective may be omitted, except before the last; as "The particular bulk, number, figure and motion of the parts of fire or snow are really in them." Locke 2. 8. The copulative may however be inserted, where the repetition of it adds to the ideas dignity, force or solemnity.

When terms of number are employed to specify the particulars, the copulative is suppressed; as "These three then, first the law of God, secondly the law of political societies, thirdly the law of fashion or private censure, are those to which men compare their actions." Locke 2. 28. 13.

* The last example is an evidence that mine is a possessive case!
NOTE 1. The rule for the use of a plural verb with two or more names in the singular number, connected by and, is laid down by critics with too much positiveness and universality. On original principles, all the names, except the first, are in the objective case; for it is probable that and contains in it the verb add. "John and Thomas and Peter reside at York," on primitive principles must be thus resolved—"John, add Thomas, add Peter reside at York." But without resorting to first principles, which are now lost or obscured, the use of the singular verb may be justified by considering the verb to be understood after each name; and that which is expressed, agreeing only with the last, as "Nor were the young fellows so wholly lost to a sense of right, as pride and conceit has since made them affect to be." Rambler. No. 97. That is, as pride has and as conceit has. "Their safety and welfare is most concerned." Spectator. No. 121. In our best authors the singular verb is frequent in such sentences."

What will the hypercritic say to this sentence, "Either sex and every acre was engaged in the pursuits of industry." Gibbon. Rom. Emp. ch. 10. Is not the distributive effect of either and every, such as to demand a singular verb? So in the following: "The judicial and every other power is accountable to the legislative." Paley. Phil. 5. 8.

NOTE 2. When names and substitutes belonging to different persons, are thus joined, the plural substitute must be of the first person in preference to the second and third, and of the second in preference to the third—"I, you and he are represented by we; you and he, by you." Pope in one of his letters makes you or I to be represented by we or you. "Either you or I are not in love with the other." The sentence is an awkward one and not to be imitated.

RULE VII.

When an affirmation or predicate refers to one subject only among a number, which are separately named in the singular number, the subjects are joined by the alternative or or nor, with a verb, substitute and name in the sin-

* This was also a very common practice with the best Greek and Roman writers—"Mens enim, et ratio, et consilium in sese desistit." Cicero. de Senec. ca. 19.

"Sed etiam ipsius terre eis et natura delectat." ibid. 15.

See Homer. II. I. 61.

See also examples in the Greek Testament. Matth. 12, 31—13, 42, 50—16, 17—28, 1.
gular number; as "Either John or Peter was at the Exchange yesterday; but neither John nor Peter is there today."

Errors. "A circle or square are the same in idea." 
 Locke 2. 8.

"But whiteness or redness are not in the porphyry."
 ibm.

"Neither of them [Tillotson and Temple] are remarkable for precision."
 Blair.

Substitutes for sentences, whether they represent a single clause, or the parts of a compound sentence, are always in the singular number; as "It is true indeed that many have neglected opportunities of raising themselves to honors and to wealth, and rejected the kindest offers of fortune." Rambler. No. 58. Here it and that refer to the clauses which follow— "It is true that, many have rejected the kindest offers, &c.

"It being unavoidable in discourses, differing from the ordinary received notions, either to make new words, or to use old words in a new signification." Locke 2. 12. 14. Here it refers to the two alternative clauses which succeed.

RULE VIII.

Collective or aggregate names, comprehending two or more individuals under a term in the singular number, have a verb or substitute to agree with them in the singular or plural; as The council is or are unanimous; the company was or were collected; this people, or these people.

No precise rule can be given to direct, in every case, which number is to be used. Much regard is to be had to usage, and to the unity or plurality of idea. In general, modern practice inclines to the use of the plural verb and substitute; as may be seen in the daily use of clergy, nobility, court, council, commonalty, audience, enemy and the like.

"The clergy began to withdraw themselves from the temporal courts." Blacks. Com. Introduction.
Let us take a view of the principal incidents, attending the nobility, exclusive of their capacity as hereditary counsellors of the crown." Bl. Com. 1. 12.

"The commonalty are divided into several degrees."

ibm.

"The enemy were driven from their works." Portuguese Asia. Mickle. 163.

"The chorus prepare resistance at his first approach—the chorus sings of the battle—the chorus entertains the stage." Johnson's Life of Milton.

"The nobility are the pillars to support the throne."

Bl. Com. 1. 2.

Party and army, in customary language, are joined with a verb in the singular number. Constitution cannot be plural. Church may be singular or plural. Mankind is almost always plural.

The most common and palpable mistakes in the application of this rule, occur in the use of sort and kind, with a plural attribute—these sort, those kind. This fault infects the works of our best writers; but these words are strictly singular, and ought so to be used.

When a collective name is preceded by a definite, which clearly limits the sense of the word to an aggregate with an idea of unity, it requires a verb and substitute to agree with it in the singular number; as a company of troops was detached; a troop of cavalry was raised; this people is become a great nation; that assembly was numerous; "a government established by that people." Bl. Com. 1. 2.

Yet our language seems to be averse to the use of it, as the substitute for names even thus limited by a, this or that. "How long will this people provoke me, and how long will it be ere they will believe me for all the signs that I have shewed among them." Num. 14. 11. "Liberty should reach every individual of a people; as they all share one
common nature." Spectator. No. 287. In these passages, *it* in the place of *they*, would not be relished by an English ear; nor is it ever used in similar cases.*

RULE IX.

When the nominative consists of several words, and the last of the names is in the plural number, the verb is commonly in the plural also; "A part of the exports consist of raw silk." "The number of oysters increase." Golds. Anim. Nat. vol. 4, ch. 3. "Of which seeming equality we have no other measure, but such as the train of our ideas have lodged in our memories." Locke 2. 14. 21. "The greater part of philosophers have acknowledged the excellence of this government." Anarch. vol. 3. 272.

Note 1...The practice of using a plural verb after these and similar nominatives, is a proof of the propriety of considering the whole of the words or the name and its adjuncts as the actual nominative. Separate the words *part* and *exports* in the first example, and the affirmation of the verb cannot with truth be applied to either; and as the whole must be considered as the nominative, the verb is very naturally connected in number with the last name.

Note 2...When an aggregate amount is expressed by the plural names of the particulars composing that amount, the verb may be in the singular number; as "There was more than a hundred and fifty thousand pounds sterling. Mavor. Voyages 1.

However repugnant to the principles of grammar this may seem at first view, the practice is correct; for the affirmation is not made of the individual parts or divisions named, the pounds, but of the entire sum or amount. See this subject more fully explained under Rule 14.

*The Romans used a greater latitude in joining plurals with collective names, than we can—"Magna pars in villis repleti cibo vinoque." Liv. 2. 26. Here is an attribute plural of the masculine gender, agreeing with a name in the singular, of the feminine gender.
PRACTICAL GRAMMAR.

RULE X.

Substitutes [pronouns] must agree with the names they represent, in number, gender and person; as

"Mine answer to them that do examin me is this."  
1 Cor. 9. 3.

"These are not the children of God."  Rom. 9. 8.

"Speak unto the children of Israel and say unto them, when ye come into the land whither I bring you."

Num. 15. 18.

"This is the heir, come let us kill him, and let us seize on his inheritance."  Matth. 21. 38.

"Esther put on her royal apparel—she obtained favor in his sight—then the king said unto her."  Esth. 5.

"A river went out of Eden to water the garden, and it was parted"—Gen. 2. 10.

"The woman whom thou gavest to be with me."

Gen. 3. 12.

"Ignatius, who was bishop of Antioch, conversed with the apostles."  Paley. Evid. sect. 3.

"A letter, which is just received, gives us the news."

"O thou who rulest in the heavens."

Who and whom are exclusively the substitutes for persons; whose is of all genders, and as correctly applied to things as to persons.

"The question whose solution I require."  Dryden.

"That forbidden fruit whose mortal taste"—Milton.

"A system whose imagined suns;"  Golds.

"These are the charming agonies of love Whose miseries delight."  Thomf.

It, the neuter, is used as the substitute for infant or child; the distinction of sex in the first period of life being disregarded.
Formerly which was used as a substitute for persons; as appears from old authors, and especially in the vulgar version of the scriptures—"mighty men which were of old." But this use of the word is entirely discarded. Which however represents persons, when a question is asked or discrimination intended; as which of the men was it; I know not which person it was.

Who, is sometimes used as the substitute for things, but most unwarrantably: "The countries who"—Davenant on Rev. 2. 13. "The towns, who"—Hume Contin. 11. ch. 10. "The faction or party who"—Equally faulty is the use of who and whom for brutes: "the birds who"—

The use of it for a sentence, seems to have given rise to a very vague application of the word in phrases like this: How shall I contrive it to attend court? How fares it with you? But such phrases, whatever may have given rise to them, are used chiefly in familiar colloquial language, and are deemed inelegant in any other style.

A more justifiable use of it is seen in this sentence: "But it is not this real essence that distinguishes them into species; it is men, who range them into sorts," Sec. Locke. 3. 6. 36.

Here it is in the singular, tho referring to men in the plural. The cause or origin of this, in our language as in others, may perhaps be found in the disposition of the mind to combine the particular agents employed in performing an act, into a single agent. The unity of the act or effect seems to predominate in idea, and control the grammatical construction of the substitute.

RULE XI.

In compound sentences, a single substitute, who, which, or that employed to introduce a new clause, is the nominative to the verb or verbs belonging to that clause, and to others connected with it; as "The thirst after curiosities, which often draws contempt." Rambler, No. 83. "He who suffers not his faculties to lie torpid, has a chance of doing good." ibm. "They that are after the flesh, do
mind the things of the flesh.” Rom. 8. 5. “Among those who are the most richly endowed by nature, and are accomplished by their own industry, how few are there whose virtues are not obscured by the ignorance, prejudice or envy of their beholders.” Spec. No. 255.

In a few instances, the substitute for a sentence or a clause, is introduced as the nominative to a verb, before the sentence or clause which it represents; as “There was therefore, which is all that we assert, a course of life pursued by them, different from that which they before led.” Paley. Evid. ch. 1. Here which is the representative of the whole of the last part of the sentence, and its natural position is after that clause.

The substitute what combines in itself the offices of two substitutes, which, if expressed, would be the nominatives to two verbs, each in distinct subsequent clauses; as “Add to this, what, from its antiquity is but little known, has the recommendation of novelty.” Hermes. pref. 10. Here what stands for that, which—and the two following verbs have no other nominative.

This use of what is not very common. But what is very frequently used as the representative of two cases—one, the objective after a verb or preposition, and the other, the nominative to a subsequent verb. Examples:

“I heard what was said.”
“He related what was seen.”
“We do not so constantly love what has done us good.”

“Agreeable to what was afterwards directed.”
Bl. Com. b. 2. ch. 3.

“Agreeable to what hath been mentioned.”
Pridnaux. p. 2. 6. 3.

“There is something so overruling in whatever inspires us with awe.” Burke. on Sublime. 364. In these sentences what includes an object after a verb or preposition, and a nominative to the following verb. “I have heard that, which was said.”
RULE XII.

When a new clause is introduced into a sentence, with two substitutes, or with one substitute and a name, one of them is the nominative to the verb, and the other is governed by the verb or a preposition in the objective case, or by a noun in the possessive; as "Locke, whom there is no reason to suspect of favoring idleness, has advanced"—Ramb. 89. Here reason is the nominative to is, and whom is governed by suspect.

"Take thy only son Isaac, whom thou loveth." Gen. 22. Here are two substitutes, one the nominative to the verb, and the other governed by it in the objective.

"God is the sovereign of the universe, whose majesty ought to fill us with awe, to whom we owe all possible reverence, and whom we are bound to obey."

It is not unusual to see in periods, a third clause introduced within a second, as a second is within the first, each with a distinct substitute for a nominative; as, "Those modifications of any simple idea, which, as has been said, I call simple modes, are distinct ideas." Locke 2. 13.

Involution to this extent may be used with caution, without embarrassing a period; but beyond this, if ever used, it can hardly fail to occasion obscurity. Indeed the third member included in a second, must be very short, or it will perplex the reader.

Substitutes are sometimes made to precede their principals; thus, "When a man declares in autumn, when he is eating grapes, or in spring when there are none, that he loves grapes." Locke 2. 20. But this arrangement is usually awkward and seldom allowable.
RULE XIII.

When there are two antecedents in different persons, to which a nominative substitute refers, the substitute and verb following may agree with either; tho usage may sometimes offer a preference; as “I am the Lord that make all things; that stretch forth the heavens alone; that spread abroad the earths,” &c. Isa. 44. Here I and Lord are of different persons, and that may agree with either—If it agrees with I the verbs must be in the first person; “I am the Lord that make.” If that agrees with Lord in the third person, the verb must be in the third person; “I am the Lord that maketh.” But in all cases, the following verbs should all be of the same person.

RULE XIV.

The definitive attributes, this and that, the only attributes which are varied to express number, must agree in number with the names to which they refer; as this city, that church; these cities, those churches.

This and that are often used as substitutes for a name in the singular number, which is omitted; but the same name in the plural immediately follows after a connective; as in this example, “The mortality produced by this and other diseases”—Life of Washington. 3. 6. That is, by this disease and other diseases. The sentence may be varied thus—by this disease and others—but the first form is the most common, and it occasions no obscurity.

Other attributes and verbals used as attributes, are joined to the names which they qualify without inflection; as a wise man, wise men; an amiable child, or amiable children; a received truth, or received truths; a shining character, or shining characters.

Attributes are often used as substitutes for the names of men and things which they describe by their qualities; as few were present; the wise are respected; the bravest are not always victorious.
In this character, attributes take the plural form, and are qualified by other attributes; as the goods of fortune, two finites or infinites, universals, generals—the chief good, a happy few; "the extraordinary great"—Burke on the Sublime, 304. "The blue profound." Akenside.

When names are joined by a copulative, an attribute preceding the first, is applied to the others without being repeated; as "From great luxury and licentiousness"—here great belongs to licentiousness as well as to luxury. "Converted to strict sobriety and frugality of manners." Enfield.

When a period of time is described by its component parts or portions, specified by plural names, an attribute in the singular number, or denoting unity, may be joined to the plural names of the parts; as "I have not been to London this five years?" "an election regularly takes place every seven years?" that is, in every single period or term of seven years.

This idiom is explainable on very natural principles. The whole portion of time has no name, and we are therefore obliged to express our idea of it by something equivalent; which, in this instance, are the parts, five and seven years. The mind is fixed upon the entire period, and while the lips utter the name of the parts, the mind naturally considers the whole as a unity, and overlooking the several portions, attaches the attribute to that unity or whole period. Hence originated the customary abbreviation of twelve months, into a twelvemonth; seven nights into seven-night; fourteen nights into a fortnight; and hence dozen, hundred, &c. admit the definitive a.

To the same cause probably may be ascribed the common phrases, twenty pound, thirty foot, and others similar; in which a whole quantity or space, for which we have no appropriate name, is described by smaller portions equivalent. The idea of unity, in all such cases, being predominant, and the only one which the speaker wishes to communicate, is very apt to control the language, and occasion the omission of the sign of the plural, even when it is necessary to the very purpose intended.
Hence we learn the cause why enumeration and addition of numbers are usually expressed in the singular number; two and two is four; seven and nine is sixteen; that is, the sum of seven and nine is sixteen. This is correct upon principle; for the affirmation respects the total amount or result, which in idea is always a unity. These idioms, instead of being violations of grammatical rules, as our critics would make us believe, are wonderful proofs either of ingenuity in the framers of language, or more probably, of an irresistible propensity in men, independent of reasoning, to accommodate words to ideas, and to express their ideas with the utmost brevity as well as force.

RULE XV.

Attributes are usually placed before the names to which they belong; as a wise prince; an obedient subject, a pious clergyman, a brave soldier.

Exception 1. When some word or words are dependent on an attribute, it follows the name; as knowledge requisite for a statesman; furniture convenient for a family.

Exception 2. When an attribute becomes a title, or is emphatically applied to a name, it follows it; as Charles, the Great; Henry, the First; Lewis, the Gross; Wisdom incomprehensible.

Exception 3. Several attributes belonging to the same name, may precede or follow the name to which they belong; as a learned, wise and martial prince, or a prince learned, wise and martial.

Exception 4. The verb be often separates the name from its attribute; as war is expensive; gaming is ruinous.

Exception 5. An emphatical attribute is often used to introduce a sentence, in which case it precedes the name which it qualifies, and sometimes at a considerable dis-
tance; as “Great is the Lord;” auspicious will be that event; fortunate is that young man who escapes the snares of vice.

**Exception 6.** The attribute *all* may be separated from its name by *the*, which never precedes it in construction; as “all the nations of Europe.” *Such* and *many* are separated from names by *a*; as “such a character is rare;” “many a time.”

All attributes are separated from names by *a* when preceded by *so* and *as*—so rich a dress—as splendid a retinue; and they are separated by *a* or *the*, when preceded by *how* and *however*; as “how distinguished an act of bravery”—“how brilliant the prize.” “However just the complaint.”

The word *soever* may be interposed between the attribute and the name; “how clear soever this idea of infinity”—“how remote soever it may seem.” *Locke.*

*Double* is separated from its noun by *the*; as “double the distance”—the, in such cases, never preceding *double*. But *a* precedes *double*, as well as other attributes.

*All* and *singular* or *every* precede *the* before the name in these phrases. “All and singular the articles, clauses and conditions.” “All and every of the articles”—phrases of the law style.

**RULE XVI.**

Attributes belong to verbs in the radical form or infinitive mode; as “to see is pleasant”—“to ride is more agreeable than to walk;” “to calumniate is detestable.”

Sometimes the attribute belongs to a radical verb in union with another attribute or a name; as “to be blind is unfortunate;” “to be a coward is disgraceful.” Here the attribute *unfortunate* is the attributive of the first clause, *to be blind, &c.*
Attributes belong to sentences, or whole propositions:

Examples:

"Agreeable to this, we read of names being blotted out of God's book." Burder's Oriental Customs. 375.

What is agreeable to this? The answer is found in the whole of the last clause of the sentence.

"Antiochus—to verify the character prophetically given of him by Daniel, acted the part of a vile and most detestable person, agreeable to what hath been aforementioned of him."

Prideaux. part 2. b. 3.

"Her majesty signified her pleasure to the admiral that as soon as he had left a squadron for Dunkirk, agreeable to what he had proposed, he should proceed with the fleet."

"Independent of his person, his nobility, his dignity, his relations and friends, may be urged," &c. Guthrie's Quintilian.

"No body can doubt but that these ideas of mixed modes are made by a voluntary collection of ideas put together in the mind, independent from any original patterns in nature."

Locke. 3. 5.

"Whereupon God was provoked to anger, and put them in mind how, contrary to his directions, they had spared the Canaanites." Whiston's Josephus. b. 5. ch. 2.

"Greece, which had submitted to the arms, in her turn, subdued the understandings of the Romans, and contrary to that which in these cases commonly happens, the conquerors adopted the opinions and manners of the conquered."

Enfield. Hist. Phil. b. 3. 1.

"This letter of Pope Innocent enjoined the payment of tithes to the parsons of the respective parishes, where any man inhabited, agreeable to what was afterwards directed by the same Pope in other countries."

Blacks. Comment. b. 2. ch. 3.
"Agreeable to this, we find some of the Anglo-Saxon ladies were admitted into their most august assemblies." *Henry, Hist. Brit.* b. 2. ch. 1. sect. 4.

"As all language is composed of significant words variously combined, a knowledge of them is necessary, previous to our acquiring an adequate idea of language." *Encyclopaedia. Art. Grammar.*

"His empire could not be established, previous to the institution of pretty numerous societies." *Smellie, Ph. Nat. Hist.* 339.

"Suitable to this, we find that men, speaking of mixed modes, seldom imagine," *Locke.* 3. 5. 11.

"No such original convention of the people was ever actually held, antecedent to the existence of civil government in that country." *Pal. Phil.* b. 6. ch. 3.

*Note*... Writers and critics, misapprehending the true construction of these and similar sentences, have supposed the attribute to belong to the verb, denoting the manner of action. But a little attention to the sense of such passages will be sufficient to detect the mistake. For instance, in the example from Enfield, the attribute contrary cannot qualify the verb adopted; for the conquerors did not adopt the opinions of the conquered in a manner contrary to what usually happens—the manner of the act is not the thing affirmed, nor does it come into consideration. The sense is this, the fact, that the conquerors adopted the opinions and manners of the conquered, was contrary to what commonly happens in like cases. The attribute belongs to the whole sentence or proposition. The same explanation is applicable to every similar sentence.

In consequence of not attending to this construction, our hyper-critics, who are very apt to distrust popular practice, and substitute their own rules for customary idioms founded on common sense, have condemned this use of the attribute, and authors, suffering themselves to be led astray by these rules, often use an adverb or modifier, in the place of an attribute.

"The greater part of philosophers have acknowledged the excellence of this government, which they have considered, some relatively to society, and others as it has relation to the general system of nature." *Anarch.* ch. 62.

"The perceptions are exalted into a source of exquisite pleasure, independently of every particular relation of interest." *Studies of Nature.* 12.
In the first of these examples, relatively is used very awkwardly for as relative, or as relating, or as it relates, or in relation; for the word has a direct reference to government.

In the second example, independently is used as if it had been intended to modify the verb exalt—the perceptions are independently exalted. But the manner of exalting is not the thing described. It is not that the perceptions are exalted in an independent manner, not in a manner independent of a relation to interest; but the fact, that the perceptions are exalted into a source of exquisite pleasure, is independent of every relation of interest. Equally faulty is the following sentence:

"Agreeably to this law, children are bound to support their parents."—Paley, Phil.

Johnson in his life of Thompson has this sentence—"Why the dedications are to winter and the other seasons, contrarily to custom, left out, in the collected works, the reader may imagine." It is strange that a man of this author's discernment should not perceive that it was not the manner of leaving out, which he was stating, but the fact—The dedications to winter and other seasons are left out, which fact or thing is contrary to custom. I do not recollect this use of contrary in any other passage; tho it is certainly as vindicable as the use of any other modifier under like circumstances; for in every case it entirely perverts the sense. In this instance, the use of the modifier instead of the attribute, may have been an oversight.

In this kind of phrase, I have even seen an instance of the participle accordingly converted into accordingly. See this word explained in the sequel. I have not seen priorly used for prior, in like sentences—"Priorly to his arrival in England."—Nor anteriorly, posteriorly, exteriorly, inferiorly, nor adjacently, or contiguous to the river; and the like barbarisms; but subsequently, antecedently, consistently, conformably, are frequent, in our best authors. "To do what we will, consistently with the interest of the community, is civil liberty."—Paley, Phil. 6. 5.

This is not English; for it is not the manner of doing, but the thing done, which must be consistent with the public interest. A misapprehension of the true import and construction of such passages, has done immense mischief to the language.

*The idiom in question has resulted from that disposition to abridge the number of words used in communicating ideas, which I have repeatedly mentioned; the effects of which are among the prime excellencies of every language.
RULE XVIII.

Attributes are used to modify the action of verbs, and to express the qualities of things in connection with the action by which they are produced. Examples:

"Open thine hand wide." Deut. 15. 17.

We observe, in this passage, that wide, the attribute of hand, has a connection with the verb open; for it is not "open thy wide hand;" but the attribute is supposed to be the effect of the act of opening. Nor can the modifier, widely be used; for it is not simply the manner of the act which is intended; but the effect.

"Let us write slow and exact." Guthrie. Quin. 2. 375.

We might perhaps substitute slowly for slow, as describing only, the manner of writing; but exactly cannot be substituted for exact; for this word is intended to denote the effect of writing, in the correctness of what is written. The attribute expresses the idea with a happy precision and brevity.

As this is one of the most common, as well as most beautiful idioms of our language, which has hitherto escaped due observation, the following authorities are subjoined to illustrate and justify the rule.

"We could hear distinctly the bells—which sounded sweetly soft and pensive." Chandler's Travels, ch. 2.

"A southerly wind succeeded blowing fresh." ibid. vol. 2. 3.

"His provisions were grown very short." Burchet's Hist. 357.

"When the Caloric exists ready combined with the water of solution." Lavoisier. Trans. ch. 5.

"The purest clay is that which burns white." Encyc. art. Chemistry.

"Bray, to pound or grind small." Johnson's Diet.

"When death lays waste thy house." Beattie's Minsh.
"All which looks very little like the steady hand of nature." Pal. Phil. ch. 5.

"Magnesia feels smooth; calcareous earths feel dry; eichomarga feels very greasy or at least smooth; yet some feel dry and dusty." Kirwan. vol. 1. 12. 189.

"By this substance, crystals and glasses are colored blue." Chaptal. Trans. 299.

"There is an apple described in Bradley’s work, which is said to have one side of it a sweet fruit, which boils soft; and the other side, a sour fruit which boils hard."

"Drink deep or taste not the Pierian spring."
Pope.

"Heaven opened wide her ever during gates."

"The victory of the ministry cost them dear."
Hume. Contin. 11. 9.

"And just as short of reason he must fall." Pope.

"Thick and more thick the steely circle grows."
Hoole’s Tasso b. 8.

"Ancus—marched strait to Fidenæ."

"The cakes eat short and crisp."
Vicar of Wakefield.

"A steep ascent of steps which were cut close and deep into the rocks." Hampton’s Polybius. 2. 265.

"It makes the plow go deep or shallower?"
Encyc. art. agriculture.

"The king’s ships were getting ready."
Lusiad. 1. 91.

"After growing old in attendance."
Spect. No. 982.

"The sun shineth watery."
Bacon. Apoth.

"Soft sighed the flute."
Thompson. Spring.

"I made him just and right."
Milton. 3. 98.

"He drew not nigh unheard." ibm. 643.
"Whether the soul be supposed to exist antecedent to, or coeval with, or some time after the first rudiments of organization." Locke, b. 2. 1.

"When the vowel of the preceding syllable is pronounced short." Murray's Grammar.

"Here grass is cut close and gravel rolled smooth. Is not that trim? Boswell. Johnson, 3.

"Slow tolls the village clock—deep mourns the turtle." Beattie's Minstrel.

"If you would try to live independent." Pope. Let.

"He obliged the Nile to run bloody for your sakes."* Whiston's Josephus, 3. 5.

"Correct the heart and all will go right.” Porteus. Lect. 3.

The poets sometimes use attributes in this manner, when modifiers would express the idea. Sometimes they are induced to it by the measure; and not unfrequently by the obvious superiority of the attribute in expressing the idea with force and precision.

When two qualifying words are wanted, the latter may be an attribute, tho applied to a verb; as ‘He beat time tolerably exact.” Golds. An. Nat. ch. 12.

"The air will be found diminished in weight exactly equal to what the iron has gained.” Lavoisier, ch. 3.

"Horses are sold extremely dear.” Golds.

"And greatly independent lived.” Thomp. Spring.

"This was applying a just principle very ill.” Vattel. Trans. 2. 7.

It will be remarked that we have no adverbial form of the attribute in the comparative and superlative degrees, except that of more and most, less and least, prefixed. But we use the attributes with the regular terminations, in these degrees, to qualify verbs. Examples:

* "Cruentam etiam fluxisse aquam Albanam, quidam auctores erant.” Liv. lib. 27. 11. Some authors related that the Alban river ran bloody.
"To hands that longer shall the weapon wield."

Hoole. Tus. 7.

"—Then the pleasing force
Of nature and her kind parental care,
Worthier I'd sing." Akenside. Pl. of Im. 1. 323.

"So while we taste the fragrance of the rose,
Glows not her blush the fairer?" ibm. 2. 77.

"When we know our strength, we shall the better know what to undertake with hopes of success."

Locke. 1. 6.

"And he that can most inform or best understand him, will certainly be welcomed." Rambler. No. 99.

"How much nearer he approaches to his end."

"I have dwelt the longer on the discussion of this point."

Junius Lct. 17.

"The next contains a spirited command and should be pronounced much higher." Murray's Grammar.*

"Leviathan, which God of all his works
Created hugest that swim th' ocean's stream." Milton. 1. 201.

"But mercy first and last shall brightest shine."

ibm. 3. 134.

"Such opinions as seemed to approach nearest [to] the truth."

Enfield. Hist. Phil. 2. 59.

"Her smiles, amid the blushes, lovelier show;
Amid her smiles, her blushes lovelier glow."

Hoole. Tasso, b. 15.

*In remarking upon such phrases as "The vices which enter deeper or deepest into the soul," Murray says, deeper and deepest should be more deeply, most deeply. But when he forgets the rule, he writes correct English. It is recommended to him, to change the attribute in the two passages I have cited—"The vowel of the preceding syllable is pronounced shortly"—"The next should be pronounced much more highly." This alteration will put his rule to the test.
Authors, misguided by Latin rules, and conceiving that every word which is used to qualify a verb, must be an adverb, have pronounced many of the passages here recited and similar ones to be incorrect—and in such as are too well established to bear censure, they call the attribute an adverb. Were it not for this influence in early education, which impresses a notion that all languages must be formed with the like idioms, we should never have received an idea that the same word may not modify a name, an attribute and a verb.

So far are the words here used from being adverbs, that they cannot be changed into adverbs, without impairing the beauty, weakening the force or destroying the meaning of the passages. Let the sentences be put to the test—Magnesia feels smoothly—the cakes bake shortly and crisply—the apples boil softly or hardly—glows not her blush the more fairly. Every English ear rejects this alteration at once—the sentences become nonsense. Nor can the attribute be separated from the verb—"Amid her smiles, her blushes, being lovelier, glow"—this is not the sense—nor will it answer to say, "her lovelier blushes glow"—this is not the idea. The sense is, that the attribute expressed by lovelier, is not only a quality of blushes, but a quality derived, in a degree, from the action of the verb, glow.

Thus, clay burns white—objects may be seen double—may rise high—fall low—grow straight, or thick, or thin, or flat, or lean—one may speak loud—the sun shines clear—the finer a substance is pulverized—to grow wiser, to plunge deeper, spread wider—and similar expressions without number, constitute a well established idiom, as common as it is elegant.*

* The Roman writers availed themselves of the same idiom.
"Ob multitudinem familiarum, quae gliscebat immensus."
Tacitus. An. lib. 4. 27.

"Fabius—Arpos primum instituit oppugnare—quae maxime neglectam custodiam vidit, ea potissimum adgredi statuit."
Liv. lib. 24. 46.

How much more impressive is the description which Tacitus here gives of an alarming insurrection of slaves, than if he had used
The attributes thus connected with verbs may easily be distinguished from those which merely qualify names, the latter being separable from the verb. Thus,

"Our great enemy
All uncorruptible, would, on his throne,

Here unpolluted has no effect at all upon the verb; but may be separated from it, and carried into the first line without altering the sense.

"And the birds sing concealed." Thompson.

"He roved uncertain through the dusky shade." Hoole.

RULE XIX.

Some attributes are used to modify the sense of others and of verbals; as a very clear day, red hot iron, a more or most excellent character. "Without coming any nearer." Locke; more pressing necessity, most grating sound, "a closer grained wood." Lavoisier. Trans.

"Full many a gem with purest ray serene." Gray.

"Some deem'd him wondrous wise." Beattie’s Minstrel.

In these expressions the last attribute belongs more immediately to the noun expressing its quality—and the first attribute qualifies the second.

the adverb! "A multitude of slaves which was increasing and growing immense!" This is giving to prose the rhetorical sublimity of verse. It is giving the verb its full effect and at the same time, attaching the attribute to that effect.

In the word potissimum, in Livy, as in many others, we see the effect of not understanding this elegant use of attributes. Such words are marked in Dictionaries as adverbs! How would Tully, Livy and Tacitus smile to see their native tongue disfigured with accents to distinguish adverbs from adjectives, in a modern dictionary of the language! It is a just remark of Mr. Tooke, that all words which critics have not understood, they have thrown into the common sink of adverbs.
Not unfrequently two attributes are used to modify a third, or the principal one; as "The manner in which external force acts upon the body is very little subject to the will." Rambler, No. 78.

RULE XX.

Attributes are used to qualify the sense of modifiers or adverbs; as a city was very bravely defended; the soldiers were most amply rewarded; a donation more beneficially bestowed; a house less elegantly furnished; a man the least peaceably disposed.

In these phrases, the modifier attends the verb or verbal to mark the manner or character of the act or affirmation; and the attribute attends the modifier to mark the degree or extent of that manner or character.

For a like purpose of defining the degrees of quality and modification, we make great use of much before attributes of the comparative and superlative degrees; as a prince much more humanely disposed; or much less martially inclined.

We have a few other words which are often used to modify attributes as well as verbs—as a little, a great deal, a trifle. "Many letters from persons of the best sense—do not a little encourage me." Spectator. 124. "It is a great deal better;" a trifle stronger; the last of which expressions is colloquial.

RULE XXI.

The attributes each, every, either and neither, have verbs and substitutes agreeing with them in the singular number; as

"Each one was a head of the house of his fathers." Josh. 22. 14.

"Every one that findeth me, shall slay me." Gen. 4. 14.
"And take every man his censer." Num. 16. 17.

"Nadab and Abihu took either of them his censer." Lev. 10. 1.

"Neither of the ways of separation, real or mental, is compatible to pure space." Locke. 2. 13.

Errors. "Let each esteem others better than themselves." It ought to be himself.

"There are bodies, each of which are so small.” It ought to be is. Locke. 2. 8.

Note—A plural verb, which affirms something of a number of particulars, is often followed by a distributive which assigns the affirmation to the particular objects or individuals. Thus, "If metals have, each a peculiar earth”—Here we may consider each as the nominative to has understood—"If metals have, if each metal has a peculiar earth.” There is no other way of resolving the phrase. This manner of expression is common, tho quite useless—as the last clause, "if each metal has”—is sufficient. It has not the merit of an abbreviation. This phrase, “Let us love one another,” is of a similar construction, but it is not easy to find a substitute of equal brevity.

RULE XXII.

Names of measure or dimension stand without a governing word, followed by an attribute; as, “a wall seven feet high and two feet thick”—“a carpet six yards wide”—“a line sixty fathoms long”—“a kingdom five hundred miles square”—“water ten feet deep.”

“An army forty thousand strong,” is a similar phrase.

Note—Double comparatives and superlatives, most straitest, most highest, being improper and useless, are not to be used. The few which were formerly used, are obsolete. Worser, a mistake in spelling worst, is obsolete; but lesser, a mistake for less, is still used, as well as its abbreviation, less.

The superlative form of certain attributes, which in the positive degree, contain the utmost degree of the quality, as extremest, chiefest, is improper and obsolete. But authors indulge in a most unwarrantable license of annexing comparison to attributes whose negative sense precludes increase or diminution; as in these sentences, “These are more formidable and more impassable than the

Similar to these are numerous expressions found in good authors—more impossible, more indispensable, less universal, more uncontrollable; and others, in which the sign of comparison is not only improper, but rather enables the epithet; for the word itself expressing the full extent of the idea, ought to bear some emphasis, which, if a qualifying word is prefixed, will naturally be transferred to that word.*

In a few instances, this usage seems to be too well established to be altered, and particularly in the use of more and most, less and least perfect. In general, it would indicate more precision of thought to apply a term of diminution to the affirmative attribute—less passable, less surmountable, less controllable; rather than a term of increase to a negative attribute.

Note 2...In English, two names are frequently united to form a new name; as earth-worm, drill-plow, ink-stand, book-case. In some cases, these compounds are by custom effectually blended into one term; in other cases, they are separated into their component parts by a hyphen—in other cases, words are united, and the first term forms a sort of occasional attribute to the second; as family-use or family-consumption.

Note 3...From a disposition to abridge the number of words in discourse, we find many expressions which are not reducible to any precise rule, formed at first by accident or ellipsis—Such are at first, at last, at best, at worst, at most, at least, at utmost, at the utmost. In these expressions there may have been an ellipsis of some name; but they are well established, brief and significant, and may be numbered among the pinions of mercury.

Note 4...We have certain attributes which follow a verb and a name to which they belong, but never precede the name. Such are adry, afeared, afraid, alone, alike, aware, akin, alive, asleep, awake, aghast, afloat, askew, ashamed, pursuant, plentiful, worth; to which may be added amiss, aground, ashore, aside, and a few others which may be used as attributes or modifiers. We say, one is adry, ashamed, alive or awake. But never an adry

* This effect may proceed also from another consideration. If the attribute alone is used, its sense precludes the idea of increase or diminution—it expresses all that can be expressed. But admit comparison, and it ceases to express the utmost extent of the quality.
person, an *ashamed* child, &c. We say, "A proclamation was issued pursuant to advice of council." But we can in no case place pursuant before a noun.

Plenty, as an attribute, has not yet been recognized by critics: but critics do not make language, nor can they reject what a nation has made. *Plenty* is constantly used as an attribute after a name in colloquial language, and is found in our best writers; to cavil at this usage therefore, is as idle as it is impertinent.

"The sea muscle is perhaps the most *plenty*." Gold's *An. Nature*.

"Where shrubs are *plenty* and water scarce." *Ibn* 2.21.

"In those provinces where wood was *plenty*." *Rycaut* Garcia-Lasso 923.

"This species is more *plenty* in France." *Encycl. art. Loxia*.

"Provisions are *plenty* and living cheap." *Ibn. art. Adrianople*.

*Worth* not only follows the name which it qualifies, but is followed by a name denoting price or value; as a book *worth* a dollar, or a guinea—it is well *worth* the money—" It is *worth* observation."—Beloe's *Herodotus*. *Erato* 98. If a substitute is used after *worth*, it must be in the objective case, as, *it* is worth them or *it*.

But *worthy*, the derivative of *worth*, follows the usual construction of attributes, and may precede the name it qualifies; as, a *worthy* man.

Regimen or Government.

**RULE XXIII.**

One name signifying the same thing with another, or descriptive of it, may be in apposition to it; that is, may stand in a like character or case, without an intervening verb; as, Paul, the apostle; John, the baptist; Newton, the philosopher; Chatham, the orator and statesman.

**Note 1.** In the following sentence, a name in the plural stands in apposition to two names in the singular, joined by an alternative.

"The terms of our law will hardly find words that answer them in the Spanish or Italian, no scanty languages." *Locke* 3. 3. 8.

**Note 2.** Names are not unfrequently set in apposition to sentences, as "Whereby if a man had a positive idea of infinite, either duration or space, he could add two infinites together; nay, make one infinite infinitely bigger than another; absurdities too gross to be confuted." *Locke* 2. 17. 20. Here the absurdities are the whole preceding propositions.
"You are too humane and considerate: things few people can be charged with." Pope Let. Here things are in apposition to humane and considerate. Such a construction may be justified, when the ideas are correct, but it is not very uncommon.

"The Dutch were formerly in possession of the coasting trade and freight of almost all other trading nations; they were also the bankers for all Europe; advantages by which they have gained immense sum." Zimmerman's Survey, 170. Here advantages is put in apposition to the two first members of the sentence.

RULE XXIV.

When two names are used, one denoting the possessor, the other the thing possessed, the name of the possessor precedes the other in the possessive case; as, "In my father's house are many mansions." Men's bravery; England's fleet; a Christian's hope; Washington's prudence.

**Note 1.** When the thing possessed is obvious, it is usual to omit the name; as, "Let us go to St. Paul's," that is, church; "He is at the President's;" that is, house.

"Nor thinks a lover's are but fancied woes." Cowper.

That is, a lover's woes. "Whose book is this? William's."

**Note 2.** When the possessor is described by two or more names, the sign of the possessive is generally annexed to the last; as, "Edward, the second of England's Queen." Bacon on Empire.

"In Edward the third's time." Blacks. Com. B. 1. Ch. 2.

"John the Baptist's head." Matt.

But if the thing possessed is represented as belonging to a number severally specified, the sign of the possessive is repeated with each; as "He has the surgeon's and the physician's advice." It was my father's, mother's, and uncle's opinion.*

* The contrary rule in Murray is egregiously wrong; as exemplified in this phrase, "This was my father, mother and uncle's advice"—This is not English. When we say, "the king of England's throne," the three words, king of England, are one name in effect, and can have but one sign of the possessive. But when two or three distinct names are used, the article possessed is described as belonging to each. "It was my father's advice, my mother's advice and my uncle's advice." We can omit advice after the two first, but by no means, the sign of the possessive.
PRACTICAL GRAMMAR.

NOTE 3...When of is used before the possessive case of nouns, there is a double possessive, the thing possessed not being repeated; as "Vital air was a discovery of Priestley's." "Combustion, as now understood, was a discovery of Lavoisier's." The sense of which is, that vital air was one of the discoveries of Priestley. This idiom prevents the repetition of the same word.

NOTE 4...The possessive may be supplied by of, before the name of the possessor; as "the hope of a Christian." But of does not always denote possession; it denotes also consisting of or in, concerning, &c. and in these cases, its place cannot be supplied by the possessive case. Thus cloth of wool, cannot be converted into wool's cloth; nor a cup of water, into water's cup; nor an idea of an angel, into an angel's idea; nor the house of Lords, into the Lord's house. An attention to this distinction would have prevented some mistakes and much impertinent criticism.

RULE XXV.

Verbals or participles are often used for names, and have the like effect in governing names in the possessive case; as "A courier arrived from Madrid, with an account of his Catholic majesty's having agreed to the neutrality." "In case of his Catholic majesty's dying without issue." "Averse to the nation's involving itself in another war." Hume. Cont. vol. 7. b. 2. ch. 1. "Who can have no notion of the same person's possessing different accomplishments." Spect. No.-130.

This is the true idiom of the language; yet the omission of the sign of the possessive is a common fault among modern writers, who learn the language by grammar, and neglect usages which are much better authority, and the basis of correct grammar. "Pieces of iron arranged in such a way as seemed most favorable for the combustion being communicated to every part." Lavoisier. Trans.

"There is no reason for hydrogene being an exception." ibm. These expressions are not English.
Transitive verbs and their verbals require the objective case or the object of action to follow them; as "In the beginning, God created the heaven and the earth."

"If ye love me, keep my commandments." "O righteous father, the world hath not known thee."

Sometimes the object and often the objective case of substitutes precedes the governing verb; as "The spirit of truth, whom the world cannot receive." "Whom ye ignorantly worship, him declare I unto you."

Whom and which, when in the objective case, always precede the verb.

In verse, a greater licence of transposition is used, than in prose, and names are often placed before the governing verb.

"But through the heart
Should jealousy its venom once diffuse." Thompson.

"She with extended arms his aid implores." ibid.

A name with whatever, whatsoever or whichever, preceding, is placed before the governing verb; as "whatsoever positive ideas we have." Locke. 2. 17.

Note 1....We have some verbs which govern two words in the objective case; as,

"Did I request thee, maker, from my clay
To mold me man?" Milton. 10. 744.

"God seems to have made him what he was." Life of Cooper.

"Ask him his opinion;" "You have asked me the news."

Will it be said that the latter phrases are elliptical, for "ask of him his opinion?" I apprehend this to be a mistake. According to the true idea of the government of a transitive verb, him must be the object in the phrase under consideration, as much as in this, "Ask him for a guinea?" or in this, "ask him to go."
This idiom is very ancient, as we often see it in the Latin—"Interrogatus sententiam." Liv. 26. 33. "Se id Scipionem orare." ibm. 27. 17. "Auxilia regem orabant." ibm. lib. 28. 5. The idiom in both languages had a common origin.

Note 2. Some verbs were formerly used as transitive, which are no longer considered as such; as "he repented him." He was swerved." "the sum was amounted." &c. which are held improper.

"Cease however, is used as a transitive verb by our best writers—"Cease this impious rage." Milton. "Her lips their music cease." Tusso. by Hoole.

RULE XXVII.

Intransitive verbs are followed by the name of the act, which the verb expresses in action; as "To live a life of virtue;" "To die the death of the righteous;" "To dream dreams;" "To run a race;" "To sleep the sleep of death."

We observe, in these examples, life is the name of living supposed to be complete; as race is the name of the act of running when accomplished.

Note. Nearly allied to this idiom is that of using, after verbs transitive or intransitive, certain nouns which are not the objects of the verb, nor of precisely the same sense; but which are either the names of the result of the verb’s action, or closely connected with it. Examples: "A guinea weighs five penny weight, six grains;" a crown weighs nineteen penny weight;" "a piece of cloth measures ten yards."

"Her lips blush deeper sweets." Thompson.

* The radical idea of weigh is carry, bear or sustain, from the Sax­
on veg, a balance. The idiom in question has its original in that idea—a guinea weighs five penny weight, six grains—that is, carries or sustains that weight in the scales. How much of the propriety, and even of the beauty of language is lost, by neglecting to study its primitive state and principles!
"To ascend or descend a flight of stairs, a ladder, or a mountain"—"To cost a guinea."

Under this rule or the following may be arranged these expressions—"Let them go their way"—"When matters have been brought this length." Lavois. Translation. "We turn our eyes this way or that way." "Reckoning any way from ourselves, a yard, a mile, &c. Locke. 2. 17.

Similar to this idiom are the phrases to go west or east—pointing north or south—north-west or south-east and the like, which I find to be Saxon phrases and very ancient.

In some instances verbs of this sort are followed by two objects; as "a ring cost the purchaser an eagle."

**RULE XXVIII.**

Names of certain portions of time and space, and especially words denoting continuance of time or progression, are used without a governing word; as "Jacob said, I will serve thee seven years for Rachel." And dust shalt thou eat all the days of thy life." "And he abode with him the space of a month." "The tree of life yielded her fruit every month." "In those days I Daniel was mourning three full weeks." "Whosoever shall urge thee to go a mile, go with him twain." To walk a mile or a league.

"Effects occurring every moment to ourselves."

"You have asked me news a hundred times." Pope.

Words expressing particular or precise points of time, are usually preceded by a preposition; as "at that hour," "on that day." But to both these rules there are exceptions.

*Lowth, followed by the whole tribe of writers on this subject, alleges some preposition to be understood before these expressions of time. But this is a palpable error, arising from preconceived notions of the necessity of such words. The fact is otherwise. All these peculiar phrases, are idiomatic; and the remains of the early state of our language.

The same idiom is found in the Greek and Latin languages, which were built on a Teutonic foundation—it is found in the Saxon, from which it is derived to modern English; and is therefore to be considered as original, or coeval with the language.
PRACTICAL GRAMMAR.

RULE XXIX.

The verb be has the same case after it as before it; or two substitutes connected with be in construction are in the same case. "It is I, be not afraid." "Thou art she," "it is he." "Who was he?" "Who do men say that I am?" "Whom do they represent me to be." "Whom do men say that I am," is incorrect.

RULE XXX.

Transitive verbs and their verbals admit of a sentence, a clause or number of words as their object; as "He is not alarmed so far, as to consider how much nearer he approaches to his end." Rambler. No. 78.

Consider what? The whole following clause, which is the object of the verb.

"For to say, a man has a positive clear idea of any quantity, without knowing how great it is, is as unreasonable as to say, he has a positive clear idea of the number of sands on the sea shore." Locke. 2. 17. 15. Here the parts of this period in Italics are the things said, the objects of the verb say. The first clause, being the object after say, forms, with the preceding words, the nominative to is—and the same clause of the period is qualified by the attribute unreasonable—For to say all which follows is as unreasonable, &c.

"If he escapes being banished by others, I fear he will banish himself." Pope. Let. to Swift.

Here being banished stands in the place of a noun, as the object after escapes.

"Whether that which we call ecstasy be not dreaming with the eyes open, I leave to be examined." Locke. 2. 19.

We cannot avoid observing their sensible qualities, nay the very substances to be in a continual flux." Locke. 2. 19.
This rule comprehends the construction of the verbs, save, except, add, admit, allow, suppose, and many others when used to govern sentences; and in strictness, the old verbs if, tho, unless. Examples:

"Add to this, what, from its antiquity, is but little known, but from that very circumstance, the recommendation of novelty." Hermes. Preface. In this sentence, the whole of the clauses in Italics, is what is to be added—and is the actual object governed by the verb add.

"Suppose then the world we live in to have had a creator"—"Suppose the disposition which dictated this council to continue." Paley. Evid. 1.

"Not forgetting therefore what credit is due to the evangelical history, supposing even any one of the four gospels to be genuine." ibm. ch. 9.

"It is good also not to try experiments in states, except the necessity be urgent or the utility evident." Bacon on Innovation.

"They are in effect no more than standing commissions, save that, they have greater authority." ibm. of Counsel.

"For that mortal dint,
Save he who reigns above, none can resist." Milton. 2. 815.

"I wish I could give you any good reasons for your coming hither, except that, I earnestly invite you." Pope. Let.

"Lord Bathurst is too great a husbandman to like barren hills, except they are his own to improve." Pope. Let. Sept. 3. 1726.

"The ships of either party may freely traffic with the enemies of the other, excepting with contraband merchandise." Anderson. Commerce. 3. 71.

"Suppose I was to say, light is a body." Hermes. 78.

"Ye cannot bear fruit, except ye abide in me." John 15.
"He that sacrificeth unto any god, save unto the Lord only, shall be put to death." Ex. 22. 20.

"And he could there do no mighty works, save that, he laid his hand on a few sick and healed them."

Matth. 6. 5.

He that is washed, needeth not, save to wash his feet."

John. 13.

"Add to this their custom of plantation of Colonies."

Bacon.

In these and similar passages, the object of the verb is a whole proposition or statement, in a sentence or clause of a sentence. In this passage, "Except ye repent, ye shall all likewise perish," the fact excepted is affirmed in a single verb. Take away this fact "that you shall repent"—and the consequence must be, you will perish. This is one of the modes of abbreviation in language which I have so frequently mentioned, and which constitutes a principal excellence of the English.

We observe in some of the passages here cited, the substitute that, after the verb. This is probably the true original construction; the substitute that, pointing to the whole following clause. "He could do no mighty works there, save that, [except that single fact which follows] he laid his hand on a few sick and healed them."

Note...It may be here observed that in some of the passages cited, the verb has no definitive nominative—the verbs save, except, suppose, add, &c. are in the imperative mode; but the address is not made to any particular person or persons. And this probably has led authors to class save and except among conjunctions, prepositions or adverbs, or to consider them as used adverbially; for it has been already observed that the class of adverbs has been a sort of common sink to receive all words which authors have not been able to comprehend.

Is it not strange that suppose, add, admit, allow, and other verbs, which are constantly used in the same manner, should have hitherto escaped the same doom? In the passages above cited from Paley, suppose is used precisely in the same manner, as except and save in others. Indeed nothing but the most inexcusable negligence could have led critics to this classification of save and except—for in many passages of scripture, these very words, in the sense in which they are called conjunctions or adverbs, have an object
following them, like other transitive verbs; as "Israel burned none of them, save Hazor only." Josh. 11. 13. "Ye shall not come into the land, save Caleb and Joshua." Num. 14. 30. "I would that all were as I am, except these bonds." Acts.

This use of verbs without a definite nominative occasions no inconvenience; for the address is not made to any particular person, but is equally applicable to any one who will apply it. See the subject further explained under rule 38. The following passage is Locke. 2. 27. 2. contains another verb used in the same manner; "Could two bodies be in the same place at the same time, then those two parcels of matter must be one and the same, take them great or little."

The error of considering save as an adverb or conjunction has however produced a multitude of mistakes in construction, as in these passages; "Save he who reigns above." Milton. "Which no man knoweth, saving he that receiveth it." Rev. 2.17. The nominative he cannot be reconciled to any principle of true construction. He ought to be him, the object after the verb. Except might have been used, and this word being called a preposition, would have required after it the objective case. But both words are verbs, and ought to have the same construction.

RULE XXXI.

The radical verb or infinitive follows, first, another verb or verbal; as "He loves to cherish the social affections"—"be persuaded to abandon a vicious life"—"he is willing to encounter danger"—"he was proceeding to relate his adventures."

2dly. The radical verb follows a name; as "The next thing natural for the mind to do." Locke. "He has a task to perform."

3dly. It follows an attribute or verbal attribute; as "a question difficult to be solved." "It is delightful to contemplate the goodness of Providence." "God is worthy to be loved and trusted." "Be prepared to receive your friend."

4thly. It follows the definitive substitute as; thus, "an object so high as to be invisible?" "a question so obscure as to perplex the understanding."
5thly. It follows than after a comparison; as "Nothing makes a man suspect much, more than to know little." Bacon on Suspicion.

6thly. It follows the preposition for, noting cause or motive; as "What went ye out for to see?" Matt. 11.

This is the true original idiom; but it is usual now to omit for; as "he went to see a reed shaken with the wind." In every phrase of this sort, for is implied in the sense; but the use of the word is confined to colloquial language.

The radical verb is independent, standing as a substitute for a whole phrase; as "It is not once in ten attempts that you can find the case you seek, in any law book; to say nothing of those numerous points of conduct concerning which the law professes not to prescribe." Paley. Philos. ch. 4.

RULE XXXII.

The verbs bid, make, see, hear, feel, let, with the auxiliaries, may, can, must, shall and will, and dare and need, when used as auxiliaries, are followed by the radical verb without the prefix to; as "He bids me come." "We cannot make them understand." "Let me see you write." "We heard him relate the story." "We felt the earth tremble." "Which they let pass." Locke. "He may go, must go, shall go, will go." "I dare engage or dare say." "He need not be anxious."
The past tense, when regular is followed by a radical verb with the usual prefix: — "You have dared to throw more than a suspicion upon mine." Junius. Let. 20. The same remark may be extended to the future tense; — "He will not dare to attack his adversary."

The popular practice of using dare in the third person without the personal termination, he dare, is correct; for this appears to have been the original manner of using this verb.— "Se the wyse, whitho se the darse—" he that will or he that dare." Alf. Gest. 6. 6. 4.

In the German language the same practice is established—dare is numbered among the auxiliars, and thus inflected in the present tense of the indicative—Ich dare—Du darst—Er darf.

In like manner, need, when a transitive verb, is regular in its inflections; as " a man needs more prudence"—" The army needed provisions."—But when intransitive, it drops the personal terminations in the present tense; is formed like an auxiliary, and followed by a verb, without the prefix to; as " Nobody need be afraid he shall not have scope enough." Locke. 2. 22. 9. " I need not go any farther." ibm. " Nor need we wonder," ibm. " The lender need be under no fear." Anarch. ch. 69. " There need be no difficulty." Beddoes' Hygeia. 1. 27. " She need dig no more, " Spectator. No. 121. " A man need not be uneasy on these grounds." Borocci. 3. 41. " He need not urge to this honorable court." Judge Chase.

In the use of this verb, there is another irregularity, which is peculiar, the verb being without a nominative, expressed or implied. "Whereof here needs no account." Mit. P. L. 4. 225. " There is no evidence of the fact, and there needs none." This is an established use of need.

**NOTE 2.** The radical verb [infinitive mode] has, in its sense and use, a near affinity to a name, and often has the construction of one. It is much employed to introduce sentences which are the nominatives to verbs, as well as the objects following them; as "To will is present with me, but to perform that which is good I find not." Here the first radical verb is the nominative to is, and the second begins the sentence which is the object after find.

**NOTE 3.** A common mistake in the use of the radical verb, is to use the perfect tense after another verb in past time; when in fact one of the verbs in the past time would correctly express the sense: Thus, " It would have been no difficult matter to have compiled a volume of such amusing precedents." Cowper to Hill. Let. 29. Here the first verb states the time past when it was not difficult to compile a volume; at that time the compilation could not be past; the verb therefore should have been to compile, which is present and always indefinite.

In the following passage, we have a like use of verbs which is correct. " A free pardon was granted to the son, who was known
to have offered indignities to the body of Varus."

**Rule XXXIII.**

The radical verb, signifying motive or purpose, often introduces a clause or sentence which is not the nominative or objective to any verb; as "To see how far this reaches, and what are the causes of wrong judgment, we must remember that things are judged good or bad in a double sense." Locke. 2. 21. 61. "To prevent property from being too unequally distributed, no person should be allowed to dispose of his possessions to the prejudice of his lawful heirs." Anarch. ch. 62.

**Note.** This form of sentence seems to be derived from the use of *for* before the verb; *for to see.* The modern practice is to prefix some noun; as *In order to see,* or *"With a view to prevent."* These are the bungling work of innovators, who were not satisfied with the original idiom, in which *for,* expressing *cause,* was prefixed to the verb; as it is still by our common people.

**Rule XXXIV.**

In the use of the passive verb, there is often an inversion of the order of the subject and object; thus, "The bishops and abbots were allowed their seats in the house of Lords." Blacks. Com. b. 1. ch. 2.

Here the true construction would be, "Seats in the house of lords were allowed to the bishops and abbots."

"Thrasea was forbid the presence of the emperor." Murphy's Tacitus. 2. 340. *Note....This is a common phrase. It may be resolved thus: The presence of the emperor was forbid to Thrasea—or Thrasea was forbid to approach the presence of the Emperor.*

"I was this day shown a new potatoe." Darwin. Phytol. sect. 18.
"He was shown that very story in one of his own books."

Guth. Quint. 1. 42.

This idiom is outrageously anomalous; but perhaps incorrigible.

**RULE XXXV.**

The verbal or participle of the present tense without a definitive a or the, or with any possessive attribute, usually retains the sense of its verb, and has the objective case after it; as "The clerk is engrossing the bill." "The love we bear our friends is generally caused by our finding the same dispositions in them, which we feel in ourselves." Pope's Letters.

"In return to your inviting me to your forest." ibm.

But when the verbal is preceded by a or the, it takes the character and government of a name, and in most cases, must be followed by of; as "The middle station of life seems to be the most advantageously situated for the gaining of wisdom. Poverty turns our thoughts too much upon the supplying of our wants, and riches, upon enjoying our superfluities." Spectator. No. 464.

In many cases, this verbal becomes a noun, without a or the; as "It is more properly talking upon paper than writing." Pope. Let.

*Note.*...The foregoing rule is often violated by our best writers, and to make it universal is to assume a authority much too dictatorial. "Some were employed in blowing of glass; others in weaving of linen." Gibbon. Rom. Emp. ch. 10.

"When the hindering any action." Locke 2. 21.

In these two examples the rule is disregarded to the prejudice of the language. But let us attend to the following—"The attributing to faculties that which belonged not to them"—Locke 2. 21. Here the verbal, preceded by the, cannot be followed by of, nor does it perform the office of a noun, but it retains the nature and government of a verb. "The not making a will is a culpable omission." Paley. Phil. ch. 23. These expressions are perfectly good English.
RULE XXXVI.

Verbals [participles] of the present tense, either single or in union with the verbal of the perfect tense, often perform, at once, the office of a verb and a name; as “The taking from another what is his, without his knowledge or allowance, is called stealing.” Locke. 2. 28. 16.

“By the mind’s changing the object to which it compares any thing.” Locke. 2. 25.

“To save them from other people’s damning them.” Wycherley to Pope.

“Such a plan is not capable of being carried into execution.” Anarch. ch. 62.

“They could not avoid submitting to this influence.” Boling. on Hist. Let. 8.

“Suppose a Christian, Platonist or Pythagorean, should, upon God’s having ended all his works, think his soul hath existed ever since.” Locke. 2. 27. 14.

“Taking a madman’s sword to prevent his doing mischief.” ibm. 1. 2. 20.

“He was displeased with the king’s having disposed of the office, or with his having bestowed it upon a worthless man.” Henry. Hist. Brit. b. 3.

“Its excesses may be restrained, without destroying its existence.” Blacks. Com. b. 1. ch. 2.

“Supposing it had a right to meet, without being called together.” ibm.

“He was near losing his life.” Dobson’s Life of Petrarch. 1. 29.

“The advising or attempting to procure any insurrection.” Judge Chase.

NOTE 1.—The verbal in ing, though strictly active in its signification, is not unfrequently used by modern authors in a passive sense;
as "More living particles are produced—than are necessary for 
nutrition or for the restoration of decomposing organs;" that is, or-
gans suffering decomposition. Darwin. Zoon. sect. 32. 9. "From 
which Caloric is disengaging"—that is, undergoing the process of 
separation. Lavoisier. Translation. "The number is augmenting 
daily." ibm. "They seemed to think Cesar was slaying before 
their eyes rather than that he was slain." Guth. Quaint. 2. 18. "The 
nation had cried out loudly against the crime while it was commit-
ting." Bading. on Hist. Let. 8. "My lives are re-printing." John.
se Bovell. 1762.

Many of this kind of verbals have become mere attributes; as 
"Writing paper; looking glass; spelling or pronouncing dictiona-
ry." Wanting and owing have long had the character of passive 
verbals—or attributes, with the sense of wanted, owed.

Note 2. The use of two verbals in the place of a noun is one of 
the most frequent practices of our best writers; as "This did not 
prevent John's being acknowledged and solemnly inaugurated Duke of 
Normandy." Henry. Hist. Brit. b. 3. The verbal being with an 
attribute, supplies the place of a noun also. "As to the difference 
of being more general, that makes this maxim more remote from 
being innate." Locke. 1. 2. 20.

RULE XXXVI.

Verbals, like attributes, agree with a sentence, a part of 
a sentence or a substitute for a sentence; as "Concerning 
relation in general, these things may be considered." Locke. 
2. 25.

Here concerning relates to the whole of the last clause of 
the sentence—"These things may be considered"—all 
which is concerning relation in general.

"This criterion will be different, according to the nature 
of the object which the mind contemplates."

Enfield. Hist. Ph. 2. 15.

That is, the difference of criterion will accord with the 
nature of the object.

"According to Hierocles, Ammonius was induced to ex-
becute the plan of a distinct eclectic school;" &c.

ibm. p. 63.
Here the whole statement of facts in the last clause was according to Hierocles; that is, it accorded with his testimony.

"I have accepted thee, concerning this thing also."  
*Gen. 19.*

"I speak concerning Christ and the Church."  
*Eph. 5. 32.*

"Thus shalt thou do unto the Levites, touching their charge."  
*Num. 8. 26.*

"And touching the house of the king of Judah, say, Hear ye the word of the Lord."  
*Jer. 21. 10.*

"Now as touching things offered unto idols, we know that we all have knowledge."  
*1 Cor. 8. 1.*

In general as is used in scripture before *touching,* and the construction is, Now as, or *that* which follows is *touching* things offered to idols. Since the translation of the Bible, this word *touching,* in this sense, has been obsolete, and *respecting* has taken its place.

"He finds the ideas he has in his mind to agree or disagree, according as the words standing for them are affirmed or denied one of another in the proposition."  
*Locke 1. 2. 23.*

In this passage, *according as* are used in a manner which is very common, but which none of our critics have seen fit to explain. *As* has the same sense here which it has in other places—it is a definitive substitute for the whole of the subsequent clause—*according that* which follows. The resolution of the sentence is thus—"The words standing for his ideas are affirmed or denied one of another—according that fact."—Or more at large the resolution will stand thus—"The words standing for his ideas are affirmed one of another—according that proposition—he finds his ideas to agree—Or the words standing for his ideas are denied of each other, according that fact, he finds his ideas to disagree." So that *according as,* when closely examined, are found to have a close affinity to the clause *independent.*

*Note.*—The use of verbals explained under this rule, coincides with that of attributes as explained under Rule 17.
RULE XXXVIII.

Verbals often stand without a name, sentence or substitute on which they immediately depend, being referable to either of the persons indefinitely: as "It is not possible to act otherwise, considering the weakness of our nature."

Spectator.

NOTE 1...Johnson in his Dictionary, calls this a kind of conjunction, and adds—"It had been more grammatically written considered, au French, but considering is always used."

This criticism indicates an incorrect view of the subject. Considered, cannot be used without a change in the structure of the sentence—"The weakness of our nature being considered." But to make this form of expression correspondent to the other clause, that ought also to be varied, and a definite person introduced, thus—"It does not appear (to us) possible to act otherwise, the weakness of our nature being considered," But this amendment would be of no advantage, but rather an injury.

To comprehend the use of such expressions, we should consider that men find it useful to deal in abstract propositions, and lay down truths without reference to persons. This manner of discourse is often less invidious than to apply propositional or opinions to persons. To accomplish this purpose, men have devised words and modes of speech which enable them thus to communicate their ideas. In the passage cited, the first clause contains a general abstract proposition, equally applicable to any person—"It is not possible to act otherwise." That is, it is not possible for me, for you, for him or for her—but it might be invidious to specify persons. It is not possible for John or Thomas to act otherwise, he considering the weakness of his nature. Hence the proposition is left without application—and it follows naturally that the persons who are to consider the cause, the weakness of our nature, should be left indefinite, or unascertained. Hence considering is left without a direct application to any person.

Whatever foundation there may be for this explanation, the idiom is common and well authorized—It bears a close affinity to the independent clause.

"Generally speaking, the heir at law is not bound by the intention of the Testator." Paley. Phil. 23.

"Supposing that electricity is actually a substance, and taking it for granted that it is different from caloric, does it not in all probability, contain caloric, as well as all other bodies?"

Thompson Chem. art. Caloric.

Here is no noun expressed or implied, to which supposing and taking can be referred; we would be most naturally understood—
PRACTICAL GRAMMAR.

"Supposing the first stratum of particles to remain in their place, after their union with caloric, we can conceive an affinity, &c." ibid. Here supposing may be referred to we, but is this the real construction?

"For supposing parliament had a right to meet spontaneously, without being called together, it would be impossible to conceive that all the members would agree," &c. Blacks. Com. B. 1. 2.

"The articles of this charge, considering by whom it was brought, were not of so high a nature as might have been expected." Henry. Brit. B. 4. ch. 1.

"It is most reasonable to conclude that, excepting the assistance he may be supposed to have derived from his countrymen, his plan of civilization was the product of his own abilities." Engfield H. Ph. 1. ch. xi.

"None of us put off our clothes, seeing that every one put them off for washing." Neh. 4. 23.

"And he said unto them, hinder me not, seeing the Lord hath prospered my way." Gen. 24. 56.

"Lie not one to another, seeing that ye have put off the old man with his deeds." Col. 3. 9.

"Comparing two men, in reference to a common parent, it is easy to frame the ideas of brothers." Locke 2. 25.

"Granting this to be true, it would help us in the species of things no farther than the tribes of animals and vegetables." Locke 3. 6. 23.

Bating for abating, in a like construction, is found in old authors, but now obsolete. Admitting, allowing, and some others are frequent in a like construction.

The substitute, which, in most of these phrases, might be most conveniently supplied, is we, as the writer may be considered as addressing himself to his readers, and including them with himself.

It will be readily observed how nearly this idiom is allied to the independent clause; for by a trifling change, these sentences may be resolved into that case. "Two men being compared in reference to a common parent, it is easy [for us, you or him] to frame the ideas of brothers."—"Hinder me not, since (seeing) the Lord hath prospered my way."

* To what cause but to the low state of philological knowledge, must be ascribed the classing of according, excepting, seeing, touching and words used in a like manner, with prepositions and conjunctions. The reference of these words to whole sentences, is one of the most common and best established idioms of the English lan.
Note 2: It has been remarked that the verbals of many of the regular verbs are obsolescent, the past tense being often used in their place; and the reasons for encouraging this practice have been assigned. The influence of Bishop Lowth has had some effect in preserving the use of the old participles in books, but not in oral and popular usage; and why should we retain words in writing which are not generally recognized in oral practice?

The following authorities, coinciding with common usage, may be considered as exhibiting the true verbals and past tenses of the verbs mentioned,

"Having spoke of this in another place." Locke. 2. 17. 5.
"If any of these creatures could have spoke." ibid. 3. 6. 27.
"He would have spoke." Milton. P. L. x. 517.
"Words interwove with sighs." P. L. 1. 621.
"Their crowns inwove with amaranth." P. L. 2. 352.
"The fragrant briar was wove." Dryden's Fables.
"A stuff wove all of gold." Encyc. art. Brocade.
"Though wove and quilted by their ladies' hands." Lusiad. 3.
"His voice was broke with sighs." Spect. No. 164.
"Had broke the enemy's lines." Murphy. Tacitus. 2. 63.
"When they have broke themselves a passage." Golds. An. Nat. 2.
"Ophirrel was broke with infamy." Hume Contin. 7. ch. 5.
"The parley was broke off." ibid.
"One of his postillions had broke his leg." Rambler. No. 61.

Without such reference, it is not possible to resolve, or correctly to understand, the sentences in which they are employed.

Indeed so ignorant have some authors been of the true construction, that they have converted accordingly, into accordingly, as if it was a modifier of the verb, in the manner before remarked of agreeably—"accordingly to the order of the day"; thus changing the true English idiom into a phrase which is neither grammar nor sense—"Thus we say, salts with earthy bases, salts with alkaline bases—accordingly as the case may be." Nicholson. Dict. Vol. 1. 158.

That is—accordingly that—The case may be; instead of accordingly that—that which follows.
"When any magnet is broke in two." Cavaillo on Magnet. 74.
"Differences had broke out." Henry Brit. 3. ch. 1. 3.
"Though broke and crushed." Hoole's Tasso. b. xi.
"The cards were broke open." Rambler, No. 15.
"Whose conspicuous merit had broke through the obscurity of his birth." Gibbon, ch. 4.
"An imposthume which is broke." Pope. Letters.
"A murderer, who has broke prison." Burke.
"Whether upheld by strength or chance." Milt. 1. 133.
"By ancient Tarsus held—a council to be held." ibm. 755.
"The victory was long held in suspense." Murphy. Tac. 2. 63.
"John was held in high esteem." Partus. Lect. xiv.
"That being dead wherein we were held." Rom. 7. 6.
"Shall not be withheld." Milt. 7. 117.
"Not transient acts beheld." Porteus. Lect. 3.
"For treasures better hid." P. L. 1. 698.
"Your life is hid with Christ in God." Col. 3. 3.
"The waters were hid as with a stone." Job. 38. 30.
"The armies sprung hexasana." Milton. 6. 204.
"From his school sprung the Ionic Sect." Enfield. 1. 145.
"Limpid water which sprung up." Rambler. No. 91.
"All earth had to her center shook." Milton. 6. 219.
"A free constitution has been shook." Bol. on Hist.
"Too strong to be shook by their enemies." Atterbury.
"The tower shook by the destroyer time." Armstrong, b. 2.
"I sunk into a slumber." Rambler. No. 102.
"Creator him they sung." Milt.
"Some say he bid his angels." Milt. 10. 663.
"He forbid hunting and hawking." Henry Brit. 5. ch. 1.
"This Turk forbid him shewing us that cavern." Tournefort. 1. 76.

"Pope Innocent II. forbid him teaching again." Enyc. art. Abelard.

* Holden, is much used in law language, tho long since neglected by all elegant writers. Our lawyers would do well to discard it, and the still more barbarous stricken, and swollen.
"She bid them beware of a red Embassy. Tournefort. 1. 186.

"The sum was bid—which had forbid." Milt. 10. 672. 694.

"Thrasea was forbid the presence of the Emperor," Murphy Tac.

"We are not forbid. Porteus. Lect. 7.

"He has got the name and idea." Locke. 1. 2. 16. It is to be remarked that Locke has scarcely once used gotten or forgotten in whole volumes of his works—a clear proof of the usage in his days.

"By natural necessity begot." Milt. 11. 745.

"Truth and faith forget." ibm. 807.

"The joy ceases when we have forget the cold." Rambler. No. 80.

"Transit acta—forget as soon as over." Porteus. Lect. 5.

"The muse forget and thou beloved no more." Pope. Elegy.

"I have chase this perfect man." Milt. 1. 165.

"As soon as the river was froze. Hume Contin. B. 4. ch. 3. Note.

"The men begun to embellish themselves. Spect. No. 434.

"Rapt into future time the bard begun." Pope. Messiah.

"A second deluge learning thus o'errun."

"Him she approached and lowly thus begun." Hoole. Tas. 5.

"Yet the heroes that o'errun regions." Rambler No. 78.

"The remainder is absorbed or drank up." Darwin. Zoon. Lect. 2.
PRACTICAL GRAMMAR.

“*The warm liquids that are drank.*” Beddoes Hyg. Es. 5.*

“*And tread the path their feet had tred before.*” Hoole. Tas. xi.

“*Which numbers have tred.*” Bacon Introd. Nov. Org.

“*When I had writ this.*” Locke. 1. 3. 15.

“*I writ a discourse.*” Swift to Pope.

“*The few words I writ to you.*” Pope to Gay.

“*He writ to Lord Godolphin.*” Johnson Life of Garth.

“*He probably thought all that he writ.*” Life of Prior.

It is among the excellencies of that cluster of elegant English writers, who adorned and illuminated their country, in the beginning of the last century, that they wrote their native language as it was generally spoke, unfettered by arbitrary rules. To attempt to fix a living language, and to found present rules on the usage of speaking in the days of Elizabeth, is as wrong in principle as it will be fruitless.

**RULE XXXIX.**

Modifiers [adverbs] are usually placed near the words whose signification they are intended to affect.

First. They are placed before attributes: as *truly* wise; *sincerely* upright; *unaffectedly* polite

Secondly. They usually follow a verb when single; as he spoke *eloquently*; and if the verb is transitive with an object following, the modifier follows the object; as “John received the present *gratefully.*”

To this rule, the exceptions are numerous, and not to be classed under general heads. “So it *frequently* happens;” “men *often* deceive themselves”—Indeed, in many cases the position of the modifier makes no difference in the sense, and may be regulated entirely by the preference

* The old participle *drunk* is so effectually obsolete, and so generally used as an attribute only, in the sense of *intoxicated*, that its use as a verbal is not a little ludicrous. “Distilled water has an insipid taste and when *drunk*, oppresses the stomach with a kind of weight.” Heron’s *Fourcroy. Vol. 1. 164—Such an abuse of words is a striking evidence of the mischief done by false rules of grammar.
of sound, in the general structure of the period, provided it is not such as to mislead the reader, in the application of the word.

Thirdly. When one auxiliar and a participle are used, the modifier is usually placed between them or it follows the participle; as "he was graciously received," or "he was received graciously." The first is the most elegant.

Fourthly. When two auxiliars are used, the modifier is usually placed after the second; as "We have been kindly treated"—But it may follow the verbal, "We have been treated kindly," and in some cases, it may precede the auxiliars; as "And certainly you must have known." *Junius, Letter 8.*

Fifthly. When modifiers are emphatical, they may introduce a sentence, and be separated from the word to which they belong, as "How completely this most amiable of human virtues had taken possession of his soul!" *Port. Lect. 8.* This position of the modifier is most frequent in interrogative and exclamatory phrases.

The modifier *always* is usually placed before the verb. *Never* commonly precedes a single verb, except *be*, which it follows; as "We are never absent from church on Sunday." It is sometimes placed before an auxiliar; as, "He never has been at court," but it is more correctly and elegantly placed after the first auxiliar, as "He has never been at court"—"he has never been intoxicated."

This word has a peculiar use in the phrase "Ask me *never* so much dowry." *Gen. 34.* "The voice of charmers, charming *never* so wisely." *Psalm 58.* The sense is "Ask me so much dowry as *never* was asked before"—an abbreviation singularly expressive of the idea of asking to any amount or extent. Authors not understanding it, have substituted *ever* for *never*, which impairs the force, if it does not destroy the sense, of the phrase. The use of both is now common, but *never* is preferable—"Some agreements indeed, tho *never* so expressly made, are deemed of so important a nature, that ther ought not to rest in verbal promise only." *Black, Com. B. 3. ch. 9.*

The use of *here* and *there*, in the introduction of sentences before verbs, forms an authorized idiom of the language; tho the words may be considered as redundant.
The practice may have originated in the use of the hand in pointing, in the early stage of society.

*Here, there, and where*, originally denoting *place*, are now used in reference to words, subjects and various ideas of which place is not predicable. "It is not so with respect to volitions and actions; *here* the coalescence is intimate." *Hermes.* ch. 8. "We feel pain in the sensations, *where* we expected pleasure." *Locke.* 2. 7. 4.

*Hence, whence* and *thence*, denoting the place from which a departure is stated, are used either *with* or *without* the preposition *from.* In strictness, the idea of *from* is included in the words, and it ought not to be used. These words also are used not only in reference to place, but to any argument, subject, or idea in a discourse.

*Hither, thither* and *whither*, denoting to a place, are obsolete in popular practice; and obsolescent in writing; being superseded by *here, there, and where.* This change is evidently the effect of the all-controlling disposition of men to abridge speech, by dismissing useless syllables, or by substituting short words of easy pronunciation, for those which are more difficult. Against this disposition and its effects, the critic remonstrates in vain; and we may rest assured that common convenience and utility are better guides in whatever respects the use of words, than the opinion of men in their closets. No word or syllable in a language, which is essential or very useful, is ever lost.

*While* is a noun denoting *time,* and not a modifier. In this phrase, "I will go *while* you stay," the word is used in its primitive manner, without government, like many other names of portions of time—*a month, a week.*

We are accustomed to use, as modifiers, *a little,* and *a great deal.* "The many letters I receive, do not *a little* encourage me." *Spect.* No. 124. Many names are used in like manner, as modifiers of the sense of verbs. "You don't care *sixpence* whether he was wet or dry." *Johnson.*

**RULE XI.**

In polite and classical language, two negatives destroy the negation and express an affirmative; as "*Nor did he*
not perceive them,"—that is, he did perceive them. This phraseology is not common nor agreeable to the genius of our tongue.*

The following is a common and well authorized use of negatives. "His manners are not inelegant," that is, are elegant. This manner of expression however, when not accompanied with particular emphasis, denotes a moderate degree of the quality.

NOTE In popular language, two negatives are used for an negation, according to the practice of the ancient Greeks and the modern French. This idiom was primitive, and was retained in the Saxon; as "Oe seking Peada ne riadene none while."—Sax. Chron. p. 33. And the king Peada did nor reign none while—that is, not a long time. The learned, with a view to philosophical correctness, have rejected the use of two negatives for one negation; but the expediency of the innovation may be questioned, for the change has not reached the great mass of the people, and probably never will reach them; it being nearly impossible, in my opinion, ever to change a usage which enters into the language of every cottage, every hour and almost every moment. Such usages are always regulated by tradition. The consequence is, we have two modes of speaking directly opposite to each other, but expressing the same thing. "He did not owe nothing," in vulgar language, and "he owed nothing," in the style of the learned, mean precisely the same thing. It makes no difference that men of letters denounce vulgar language, as incorrect—Language in a nation should be uniform; the same words should, among all classes of people, express the same ideas—and rash indeed is the innovator who attempts to change an idiom which has the stamp of the authority of thousands of years—[for the idiom in question is certainly as old as the Greek language, which sprung from the Teutonic] and which is so incorporated into the language of common affairs, as to render hopeless every effort towards a reformation. To create essential differences between the language of polite and common life, is a serious evil. In this instance, the people have the primitive idiom; and if the Greeks, that polished nation, thought fit to retain two negatives for a negation, in the most elegant language ever formed, surely our men of letters might have been less fastidious about retaining them in the English. It is not expected that any change can now be effected in the practice of one class of people or the other; but these remarks are intended to suggest a salutary caution against indulging a spirit of innovation, under the pretext of reforming what is supposed to be wrong.

* Milton seems to have understood Latin better than English.
RULE XLI.

Prepositions are followed by the names of objects and the objective case; as From New-York to Philadelphia; across the Delaware; over land; by water; through the air; with us; for me; to them; in you; among the people; towards us.

The preposition to is supposed to be omitted after verbs of giving, yielding, affording, and the like; as "give them bread," instead of "give bread to them." "Afford him protection;" "furnish her with books." But this idiom seems to be primitive, and not elliptical.

From is sometimes suppressed, as in this phrase, "He was banished the kingdom."

Home, after a verb denoting motion to, is always used without to; as "We are going home."

In general, the preposition is placed next before a substitute; as to him, for us—but may be separated from a name by an attribute and definitive; as "in the busy scenes of life."—

After the attribute near, to is often omitted; as "To bring them nearer the truth." Massillon. Also after adjoining; as "a garden adjoining a river."

The preposition is sometimes separated from the word which it governs; as "With a longing for that state which he is charmed with," instead of with which he is charmed. In many cases, the relative substitute may be suppressed; as "I did not see the person he came with;" that is, with whom he came—and in other cases, what is employed for the word governed; as "I know not what person he gave the present to."

This separation of the preposition from the word governed by it, and the suppression of the substitute, are most common and most allowable in colloquial and epistolary language. In the grave and elevated style, they are seldom elegant; and never to be admitted to the prejudice of perspicuity; as in the following passage—"Of a space or number, which, in a constant and endless enlarging progression, it can in thought never attain to." Locke, 2. 17. 8.
A separation of the preposition to such a distance from the word with which it is connected in construction, is perplexing and inelegant.

Note... In the use of who as an interrogative, there is an apparent deviation from regular construction—it being used without distinction of case; as “Who do you speak to?” “Who is she married to?” “Who was it made by?” This idiom is not merely colloquial; it is found in the writings of our best authors.

RULExlii.

Prepositions govern sentences and clauses or members of sentences; as “The marine acid—dissolves all metals, without excepting gold, silver or mercury.” Ency. art. Mineralog.

“Without seeking any more justifiable reasons of hostility.” Hume. 1. 5.

“Besides making an expedition into Kent.” Hume. 1. 56.

“From what has been said.” Blair. Serm.

“To the general history of these periods will be added,” &c. Enfield. Prelim.

“About the beginning of the eleventh century.” ibm.

“By observing these rules and precautions.” ibm.

“In comparing the proofs of questionable facts.” ibm.

“For want of carefully attending to the preceding distinction.” Enfield. H. Ph. b. 2.

“Before you were placed at the head of affairs.” Junius. Let. 8.

“Personal bravery is not enough to constitute the general, without he animates his whole army with courage.” Fielding’s Socrates. p. 188.

“Pray, get these verses by heart; against I see you.” Chesterfield. Let.

“After having made me believe I possessed a share in your affection,” Pope. Let. 7.
"Ambition, envy,—will take up our minds, without we can possess ourselves in sobriety." Spect. No. 143.

Note. We observe, in the foregoing passages, the preposition has two uses—one is to precede a word to which other words are annexed as necessary to complete the sense—" about the beginning"—Here the sense is not complete—the time is not designated—To define the time which is the object of the preposition about, it is necessary to add the words—" of the eleventh century"—about that time—So that the whole clause is really the object after the preposition.

The other use of the preposition is to precede names, verbs or other words which are not the object of the preposition, but which have a construction independent of it—as " after men became christians." Here men is the nominative to become; yet the whole proposition is as really the object governed by after, as the word hour, in the phrase, after that hour. " Against I see you" is a phrase of like construction—No single word is an object in the objective case after against; but the whole affirmation is the object. " Without we can possess ourselves," has a like construction, and though superseded, in a degree, by unless, a word of similar import, is a true English phrase—After [this fact] men became christians—Against [that time when] I see you—Without [this fact] we can possess ourselves.

Let us examine the following sentence, " After thus considering what was likely to happen, we are next to enquire, &c." Paley. Evid. ch. 2. Here considering refers to we, but is it not, with the whole clause, governed by after as the object?

"When we would consider eternity a parte ante, what do we but repeat in our minds the idea of years or ages?" Locke. 2. 17. 10. Here but has the force of a preposition, or of a verb in the imperative mode—equivalent to except—What do we—except this—we repeat, &c. The Saxon beutan, the original word, is probably, but not certainly, a compound of be, the verb—and utan, but—I think it more correct to assign to but, in this sense, a place among the prepositions, and governing either a single word or a sentence.

"Man, but for this, no action could attend, And, but for that, were active to no end." Pope.

"What with more decency were in silence kept, And, but for this unjust reproach, had slept," Dryd. Virg. x. 26.

"The law never speaks, but to command." Paley. Ph. 3.

Rule XLIII.

The modifiers of sentences, if, the, unless, and lest may be followed by verbs in the future tense, without the usual
auxiliaries, "as." "If his son ask bread, will he give him a stone?"—"If he ask a fish, will he give him a serpent?" "Tho he say me, yet will I trust in him." "He shall not eat of the holy things, unless he wash his flesh with water." "Lest thou say, I have made Abram rich." Except has a like effect upon the following verb: as "I will not let thee go, except thou bless me." Whether has been numbered also among the conjunctions, which require the conditional mode: but by an egregious mistake. It is not a connective, nor does it imply a condition or hypothesis, but an alternative.

NOTE.—The arrangement of the foregoing form of the verb, in the present tense of the subjunctive mode, is one of the most palpable mistakes that the compilers of English grammars have committed. It seems to have originated in the Saxon and ancient English practice of omitting the personal termination, to express future time—shall and will not being much used, in ancient times, for this purpose. In consequence of this practice, the translators of the bible, who wrote the style of the age of Elizabeth,* rarely made any difference between a present uncertainty and a future contingency; so that the present and future tenses of the original are confounded, and the form of the verb in English which comprehends both, has been placed by grammarians in the present tense of the Conditional Mode.—Take the following proofs of this fact,—From the Hebrew.

Deut. 9. 28. Lest the land say—In the original, pen yamart eartz. lest the land shall say—in the future.

Deut. 30. 17. If thine heart turn away, so that thou wilt not hear—original—U,im ipenelebebek ula tesemo—if thine heart shall turn—in the future.

1 Kings. 8. 31. At asar ichetha aisleroeu—if any man trespass against his neighbor—orig—shall trespass.

Job. 11. 10. Am ike lep vichegir viqueil, umi isibenu—if he cut off and shut up or gather together, then who can hinder him! orig—if he shall cut off and shall shut up.

Job. 13. 15. En igenousi—Tho he shall slay me—or lo, he shall slay me.

* The present translation of the bible is commonly considered as made in the reign of James I.; but on comparing it with the translations published in the beginning of Elizabeth's reign, it is evident, that the last translators merely revised the former copies, altering a few phrases and words; but leaving the body of the style unaltered,
PRACTICAL GRAMMAR.

197

Job. 27. 16. Am izeber koper kezar ukechmer akin melubus—tho he shall heap up silver as the dust, and shall prepare raiment as the clay.

Gen. 19. 19. I cannot escape to the mountains—pen telebqueni eroc uneti—lest some evil shall take me and I die.

Levit. 25. 29. Uais ki imakar bith—when, or if a man shall sell a house.

Malachi. 4. 6. Pen abua vekiti atz cherim—lest I shall come and shall strike the earth with a curse.

As a general fact, the original Hebrew, verb, which the translators have rendered by a verb without shall or will or a personal termination, is in the future tense; and the English verb, having the sense of the future, ought to be arranged in grammars under that tense.

This remark is confirmed by the Greek translation of the seventy—who render the Hebrew by a verb in the future or by an aorist, the sense of which, after a sign of condition, is future.

Job. 13. 15. Ean me child ietai—tho he should slay me.

Levit. 22. 6. ean me lousetai to soma—unless he shall wash his body.

Gen. 14. 23. ina me eipes—lest thou shouldst say—or that thou should not say.

Gen. 32. 26. ean mc me eulogesei—except thou shalt bless me.

See also Gen. 19. 15—Ex. 20. 10. and indeed examples in almost every chapter in the Old Testament.

In the New Testament, the aorist, with the sense of a future, is generally rendered by a like form of the English verb. "Take heed lest any man deceive you"—that is, shall or should deceive you. See 1. Cor. 10. 12—Heb. 3. 12. a future tense,—Luke 8. 12. and numerous other examples.

The translation may be considered as correct, but to make it correct, the verbs should in grammars be arranged under the future tense, or an aorist.

For want of attention to the distinction between present uncertainty and future contingency, the translators have confounded two tenses of the original, into one in English. Thus Matt. 4. 5. et mos ci tout thou, which ought to be translated—if thou are the son of God—is rendered, if thou be the son of God. So also Luke. 23. 55. The original is in the Indicative—if he is the son of God. So also in John 10. 24—1. 25—15. 18. If the world hates you; in the Indicative. Acts. 3. 39—if it is of God.—See also John 7. 17—1. John, 4. 1. and 3. 13.
In these and numerous other passages, the original Greek tense is correctly placed in the present tense of the Indicative—expressing a condition or uncertainty respecting a present fact or event. And our common people who learn the language by tradition, preserve this use of the Indicative, which was the primitive use; for the Greeks and English derive it, from the same source.

"And shall not God avenge his own elect, who cry to him day and night, tho he bear long with them!—Luke 18. 7. In the original, tho he bears long with them.—The fact is not mentioned as a future contingency—tho he should bear; but as a fact admitted—tho he bears long with them, still he will be avenged.

"But tho our outward man perish, yet the inward man is renewed day by day"—2 Cor. 4. 15. The original, diaphtheiretai, is in the present tense of the Indicative—tho our outward man perish, or rather, is perishing or decaying. The translation, which indicates a future casual event, tho our outward man perish, [that is, should perish] seems not to convey the Apostle's meaning, for he evidently speaks of a fact conceded, as present.

I might extend these criticisms to almost every passage in the bible, in which this pretended present tense of the subjunctive mode is used in our version, and show that the translators have confounded two tenses, which, in the original, are uniformly kept distinct.

To demonstrate the impropriety of that practice, let us attend to the principles of our own tongue.

It has been before remarked that if, tho, and unless, are old Saxon verbs in the imperative mode, and that the ingenious invention of our ancestors to express a condition or supposition was, to employ a verb, with the sense of give, grant, put, be it, that is, give the fact. We retain the idiom, and the words employed; but as these have lost their inflections, critics have ignorantly classed them with conjunctions—a part of speech to which they have no more alliance than they have to nouns or adjectives.* We have also certain words of Latin original, employed for precisely the same purpose—suppose, grant and admit, which indeed are not yet misnamed and classed with conjunctions.

The Saxon method therefore of expressing condition, doubt, or hypothesis, was to declare the fact which was to be supposed, by a verb in the Indicative mode, and prefix to this fact or statement, a verb in the Imperative mode, denoting give, grant, or suppose. Thus, "Give his son shall ask bread, will he give him a stone." Give, in the Imperative and his son shall ask bread, a sentence following give as its object—This is precisely the construction of such sentences of a conditional kind. Now to omit the personal termination of the verb in the hypothetical sentence—"Give, he ask

* If his son ask bread, will he give him a stone?" In the name of reason, what single property of a conjunction has if? The he alway me, yet will I trust in him." What connecting powers has tho? Not the least; and this is equally true of et and nisi in Latin.
bread, is to convert the sentence into false English, unless we suppose the tense future, and the auxiliary will or shall suppressed. In the present tense, it is just as bad English, as to omit the termination after the Latin equivalent words: suppose or admit. "Suppose, his son ask bread?—" Suppose, he be the son of God." Unless, is a verb, on lysean, to unloose, release, dismiss, put away, remove. Unless he wash his flesh, he will be unclean. That is, dismiss, (or suppose not to exist) this fact—he wash his flesh, and he will be unclean. This shows that the sentence is not English, except we consider wash as in the future, and the auxiliary shall suppressed. That the tense is future, is not only obvious, from the sense of the verb itself, but from the following clause—If his son (shall) ask bread, will he give him a stone? If he (shall) wash his flesh, he will be unclean—the last clauses are in the future, corresponding in time with the contingent events expressed in the first clause.

To add further proof of this explanation, some extracts from our best Saxon writings are here offered, showing that the Indicative Mode was actually employed after these signs of condition.

"We witan other egland her be easton; ther ge magon eardian, gif ge willath, and gif hwa eow withtast ent. Saxon Chronicle. p. 1. We know other island eastward from this place; there ye may dwell, if ye willeth (will) and if any one (who) shall withstand you"—Such is the literal English.

"Gif wulcan willath sibbe with us," p. 25. If the Welsh willath not (will not conclude) peace with us.

"Gif hwa hit doth." p. 43. If any one doth it.

"Gif hwa this to breketh whi thing," p. 38. If any one breaketh this anything, that is, is guilty of the least violation.

"Gif any man is"—p. 67.

"Gif thar man an bon fandeth unforbaerned"—Alfred's Orosius. p. 28. If any man fandeth a bone unburned—

"Gif hy gemunan willath hicro yldrena uncleanness." p. 61. If they willath recollect the uncleanness of old times.

"Gif any man ys"—p. 93. If any man is.

"Gif hi thonne sweatheth" p. 177. "If they then conceiveth." "Gif we him fulgangen willath" p. 178. "If we willath devote ourselves to him."

It will be noted that the Saxons joined a verb in what we now call the third person singular, with nouns and pronouns plural—we or they willath, and this form of the verb after plural nominatives is still in vulgar use—the horses runs fast. Indeed this ending eth or ath in the Saxon grammar, given as plural. But the passages cited prove the only point I am defending; which is, that the indicative case, as the language was originally constructed, follows the signs of condition.
To show that the form of the verb, in conditional sentences, which is commonly called the present tense of the subjunctive mode, is really the future tense, and was so intended by ancient writers, let the following authorities be considered.

"Gif hwa gefeohite on cyninges hus"—Give who fight in the kings house."—Si quis in regia pugnaservit." That is, if any person shall fight in the royal palace.  L. L. Ina. 6. Lambard Trans.

"Gif hwa warum unaleafed fram hishlaforde." Give who go without leave from his lord.  "Si quis decesserit a domino sine ejus venia." If any person shall depart from his lord without his permission.  L. L. Ina. 39.

"Gif hwa slea his thone nelstan mid stane."  "Give who slay (strike) his nearest with a stone."  
"Si quis percusserit suum proximum lapide." If any person shall smite his neighbor with a stone L. L. Alfred. 16.

"Se theof bree mannes hus nightes and wyrthe thatere ofslagen"—if an ath'tei break open a man's house at night and be there slain.—L. L. Alf. 25.

These and similar examples without number in the Saxon writings, demonstrate that this form of the verb was intended for a future tense. For first, let it be observed that shall and will in the Saxon were rarely used as signs of the future tense—2dly. The sense is future and contingent, as every act commanded or prohibited by law must necessarily be—and this form of the verb is usually translated into the Latin future—3dly. The same form of the verb is used in the Saxon, without the sign of a condition. For example.

"Se the slea his agenne theownees oththe mennen." He that slay (or strike) his own male or female servant.  L. L. Alfred. 17.

"Se the frione fornatele and he layne behynde, swelt se death." He that steal a freeman and sell him, let him suffer death.  L. L. Alf. 15.

"Bute he gebete," without he compensate—that is, unless he shall make compensation.  L. L. Edmund.

It is evident that the verbs are here used for the future tense; he that strike or steal, for he that shall strike or steal.

4thly. The same fact may be inferred from the use of the future by the Roman law-givers, in similar cases. So nearly allied are the Teutonic and Latin languages, that some of the pronouns in each are the same words with trivial alterations in orthography, and numerous idioms of the two languages are the same. Now in the early Roman laws, we find the verb after the sign of condition always in the future.—Witness the following laws of Romulus and Numa, in their primitive orthography.
"Si pater filion ter vendidit, filius a patre liber esto." If a father shall sell his son three times, let the son be free."

"Sei (si) puer parenteis verberit"—if a boy shall beat his parents.

"Patronus, si clienti fraudem facitis, sacer esto." If a patron shall defraud his client, let him be devoted or cursed.

In the same manner without the sign of condition. Qui terminum exarassit—he who shall remove a landmark.

There can be no doubt therefore that this form of the verb, in which the personal termination is dropped, is a real future tense, and ought to be considered as such by Grammarians. In Grammars it should stand as a future, or an aorist: noting an indefinite time and a contingent act.

Emin de ekeino diaporelon en archei, ei estin upsous tis bathous techre. Longinus, Sect. 2.

"We are first to enquire whether (or if) there is any art in the sublime and profound." Here Longinus has used the indicative to express a present doubtful fact.

"Quae [mors] aut plane negligenda est, si omnino extinguit animum, aut etiam optanda, si aliquo eum deducit, ubi sit futurus eternus." Cicero, de Senec. 19.

Death is not to be regarded, if it annihilates the soul: and is even desirable, if it conduct it to immortality.

Here uncertainty of a present fact is expressed by the present tense of the Indicative, after si; but after ubi, not a conjunction expressing uncertainty, the author uses, sit, in the subjunctive—where the soul is or may be. So also after quum, "quum tanta celeritas animorum sit," since such is the activity of the soul. Ibid. ca. 21.

In which use, no doubt or uncertainty is expressed, but the fact is admitted as true. And after si, "ex quo fit, ut animosior etiam senectus sit, quam adolescentia." Ibid. 20. By which means old age is rendered more brave than youth.

The use of the subjunctive in Latin was not regulated by the uncertainty of the fact stated; but by certain conjunctions, adverbs and preceding verbs. And a principal use of it was to express what, in English, is expressed by auxiliaries; as in the following examples. "Plantas enim dicent, quam ad modum hoc factur, quam quem ad modum his resiatur." Cicero, de Amicitia. 12.

More men will inform us how these things may happen, than how the evil may be resisted. "Quid enim refert, qua me ratione cogatis? cogitis certe." Ibid. 8. Of what importance is it, by what means you may constrain me? You still impose constraint.

"Quod si comminuas, vilem redigatur ad assem." Hor. Sat. 4. 122.

If you should lessen it, it may be reduced to a paltry farthing.

"Habes auctorem, quo facias hoc." Hor. Sat. 1. 43. You have an authority, by which you may do this, or for doing this.
"Quod si in hoc erro, quod animos hominum immortales esse credam, libenter erro"—Cic. de Sen. 23. "For if I err in this, that I believe the souls of men to be immortal, I willingly err." Here the first verb erro immediately subjoined to the conjunction implying condition or uncertainty, is in the Indicative—while the second verb, credam, which is not dependent on any word expressing condition, is in the subjunctive.

And here let it be observed that quod, in both parts of the sentence, is marked with an accent in our printed copies of the original; when in fact it is a substitute for the following sentence—quod si in hoc erro—gif which, be it, I err in this—or be that—or in old English, all be it, I err—The second quod relates immediately to the antecedent hoc—in hoc, quod—in this which follows,—in neither case is quod an adverb or conjunction—in such a wretched state is the grammar of the Latin, as well as the English language!

"Frequentes—postulant ut signum detur." The multitude demand that the signal should be given,—or in the elliptical, indefinite form, that the signal be given "Edicunt inde ut abstineant pugna." They order that they should abstain from action: Lib. lib. 11. 45. This is one of the most important uses of the Latin subjunctive Mode.

I have been more full upon this subject, with a view to reconcile the differences between books and colloquial usage. It struck me, at an early period of my studies, as the most monstrous absurdity, that books should teach us a language altogether different from the common language of life. I was determined to satisfy my own mind, which practice is most correct upon principle, and who have made innovations, the learned or unlearned. The result is perfectly satisfactory. In the particular under consideration, the popular practice of using the Indicative Mode, in conditional phrases, when present time is expressed, is perfectly correct. The personal terminations, cannot correctly be dropped after, if, tho, lest and whether, unless when the tense is future, and an auxiliary, will, shall or should, is understood.

The use of the present tense of the subjunctive, without the personal terminations was formerly very general. It was reserved for the classical writers of the eighteenth century to lay aside the pedantic forms, if he go, if it proceed, though he come, &c. and restore the native idiom of the language, by writing it as men spoke it, and as they still speak it, unless perverted by Grammars.

"If they are notions imprinted." Locke on Und. p. 15. Lon. 1796.
"If principles are innate." p. 28.
"If any person hath put such a notion into his head." p. 73.
"Whether that substance thinks or no." p. 82.
"Whether the soul doth think—whether it has pleasure or pain—or be [is] capable of happiness or misery," p. 83.
"Tho a shadow consists in nothing but the absence of light." p. 110.
"Whether these his observations are justly grounded, I cannot tell." Slect. No. 265.
"If I am rightly informed." Ibhm.
"If he has not the pomp of a numerous train." No. 264.
"Tho mutual esteem produces mutual desire to please." Rasselas. 29.
"If he was but feared." Rambler, No. 4.
"If his health was impaired." No. 5.
"If he is born to think." No. 7.
"If he is dwelling with delight." No. 8.
"If he pretends to hold him to syllogism." No. 9.
"Of which the writer, if he was to live now, would be ashamed." No. 29.
"If it was not for you." Pope Letters.
"If there was no other way." Hume continued 7. ch. 2.
"If the revolution was not lawful—if the doctor was guilty." Ibhm. ch. 5.
"If this was the decision of man only." Porteus, Lect. 3.
"If he has declared." Ibhm.
"If the reality is proved." Lect. 6. ibhm.
"Tho this institution is calculated." Coxe Trav. Russia.
"Unless some powerful motive animates this regularity and decency of appearance." Anarcharsis Trans ch. 47.
If a soldier has quitted his rank—if he is married—if the person admits the augmentation—if he does not."—ibm. ch. 56.

"If the physician does not enjoin a proper regimen—if the patient deviates from his injunctions."—Beddoes Hygiene. Es. 3.

"If newspapers are scurrilous."—Junius, Let. 16.

"If no circumstances are alleged in his favor—if no allegation be [is] made to lessen the force of evidence."—Ibm. 69.

"If he means Antigonus—if he means Demetrius."—Prideaux. 1. 2.

"Unless he thinks it proper or prudent so to do."—Blacks. Comment. 1. 2.

It is needless to multiply authorities—they may be cited without end—and such is the language. The elegant writers here cited, learnt their native tongue, certainly not in Grammars, but in actual usage, in national practice. Fortunately they were not fettered by the pedantry of schools, but they found differences between the oral and written language, some of which have crept into all their writings, and now stand as inconsistencies, not unfrequently in the same sentence. I recollect one author who is not chargeable with this fault—Dr. Gregory, in three volumes entitled the "Economy of Nature," has used the indicative after the signs of condition, without an exception; and it is with pleasure I see such respectable writers restoring the language to its primitive purity.

The poets omit the auxiliary of the future tense, without the sign of contingency—a licence not admissible in prose.

"To morrow, ere fresh morning streak the east."—Milt.

That is, shall streak.
The auxiliary is omitted also after a command.

"Gabriel—hath given
"Charge and strict watch, that to this happy place,
"No evil thing approach or enter in."—Milt.

To the false rules of our Grammars, we may ascribe the omission of the personal terminations of verbs after till and
PRACTICAL GRAMMAR.

before—"At the end of which a new shaft is sunk, and this is done repeatedly, till the shaft penetrate to the bottom of the mine." Heron's Fourcroy. 2. 248. "The resounding of the rock when it is struck, warns the workmen before this event take place." Ib. 249.

It has been remarked under the head of tenses, that the present tense is properly used for the future, after words which carry the mind forward to the time. Till is a word of this sort—its meaning is, to the time, which has such an effect upon future time, that we conceive and speak of it in the present tense.

In the first passage just cited, shall may perhaps be supplied—shall penetrate—which will render the sentence tolerable; but it cannot be prefixed to take in the second passage, and the sentence appears not only incorrect, but ludicrous. The same fault in Pinkerton's Geography, renders many passages incorrect, and some ridiculous.

Tho the Mersey present a grand estuary, its course is not of great extent." Pinkerton's Geography, v. 1. Phil. 82.

This is not English even upon Lowth's principles, for he lays it down as a rule, that when a fact is certain, admitted, or taken for granted, the indicative mode is the most proper—and he condemns this translation—"Tho he were a son, yet learned he obedience." "Tho the Mersey presents," is the true English idiom.

"A large river, which there divides itself into three branches before it join the sea." Vol. 2, 135.

"In Neged, a young Arab cannot marry till he have proved his valor." Ib. 316.

Pinkerton's works abound with similar mistakes which prove the writer to have a very superficial knowledge of Grammar; for he carries the false rules of Lowth to an extent never intended by the learned author. The like errors abound in the works of Paley—and are frequent in Dr. Miller's Retrospect of the eighteenth century; an elegant work, disfigured only by errors of grammar, into which the author must have been misled by false rules.*

* From a careful survey of the history of our language, I have ascertained beyond any reasonable doubt, that the English Gram-
Those who hold such doctrine must require that a man so attacked, must, before he strike the assailant, stop and ascertain how the pistol is loaded." Trial of Selfridge, p. 160.

I know not whether this inaccuracy is the fault of the Judge or of the reporter; but strike cannot be considered here as either future or conditional; it expresses time in that indeterminate manner, which constitutes a principal office of the present tense of the Indicative—It ought to be struck.

RULE XLIV.

Connectives join two or more clauses or members in a compound sentence:—as "Keep thy tongue from evil, and thy lips from speaking guile."

Here are two clauses united by and, which continues the sense and prevents the repetition of the verb keep.

"I sought the Lord, and he heard me, and delivered me from all my fears." Here are three clauses combined into a sentence or period by the help of and; but a new verb is introduced in each, and the second connective prevents the repetition of the substitute he only.

"A wise son heareth his father's instruction; but a scorner heareth not rebuke." Here but joins the two clauses, but a new character is the nominative to a distinct verb, in the second clause, which exhibits a contrast to the first and no word is omitted.

RULE XLV.

Connectives join single words, which are the nominatives to the same verb, expressed or understood—or words which follow a transitive verb or a preposition in the same case. Connectives also join verbs, attributes, and modifiers. Examples:

mars which have been published within the last forty years, have introduced more errors than they have corrected.
"Peter and John went up into the Temple."

Here Peter and John are the nominatives to the verb, and the connective and prevents the repetition of the verb and following part of the sentence—Peter went up into the Temple—John went up into the Temple. I and you will go to Boston—William and Thomas must go to Washington. Neither I nor John was present—Peter or Henry will attend. "I am the way and the truth and the life."

In the following, the connective joins words which are the object of a verb or preposition. "The torch of truth discovers malevolence and envy." "I have dispatched my correspondents with fair words and general civility."—Rambler.

I esteem him and her and them—He loves us and you. It is for you and me.

In the following, two verbs in the same tense or mode are joined by a connective. "Their fondness for allegory dazzled and confounded their understanding."—Enfield. "Plutarch taught philosophy and was a voluminous writer."—Ibm. "All are of the dust and turn to dust." "The idea is likely to sink the deeper and spread the farther."

Connectives join attributes and modifiers—as "He is wise and virtuous." "An orator pleads eloquently and plausibly.

The connectives perform a very important office in abbreviating language, by enabling us to omit words which must otherwise be repeated. Thus when I say "I esteem religion and virtue," two affirmations, "I esteem religion, I esteem virtue," are actually included in the sentence.

When several words or clauses succeed each other, it is not uncommon to omit the connective; as "We hear nothing of causing the blind to see, the lame to walk, the deaf to hear, the lepers to be cleansed."—Paley Evid.

After the connective than, there may be and usually is an ellipsis of a verb, a name or other words; as "There is none greater in this house than I."—Gen. xxxix. 9, that is, than I am.

"In the throne only will I be greater than thou."—Gen. xli. that is, than thou shalt be.

"He loves his money more than his honor," that is, more than he loves his honor.
"The king of the north shall return and set forth a multitude greater than the former," Dan. xi. 13, that is, than the former multitude.

"I will pull down my barns and build greater," Luke 12, that is, greater barns.

Sometimes other words may be suppressed without obscuring the sense, as "It is better for me to die than to live." Jonah 4. That is, better than for me to live.

Precise rules for the ellipsis of words, in all cases, cannot be given. In general, a writer will be governed by a regard to perspicuity, and omit no word, when the want of it leaves the sense obscure or ambiguous, nor when it weakens the strength of expression. But the following remarks and examples may be of some use to the student.

1. When a number of words are joined in construction, the definitive may be omitted, except before the first; as the sun, moon and stars—a house and garden—So also when two or more attributes agree with the same name; as a great, wise and good prince. But when attributes or names are particularly emphatical, the definitive should be expressed before each—the sun, the moon and the stars,

2. The repetition of names adds emphasis to ideas; as "Christ the power of God and the wisdom of God," is more emphatical than "Christ the power and the wisdom of God."

3. An attribute belonging to two or more names, joined by a connective, may be omitted except before the first; as my house and garden—good qualities and actions—Their interest and solicitation"—Rambler. 56. Nor does it make any difference that the names are in different numbers, as our attributes have no distinction of number, the same word may be applied to the singular number and the plural; as a magnificent house and gardens—his house and lands. But when a precedes the first attribute, this construction is not elegant.

4. In compound sentences, a nominative substitute or name may be omitted before all the verbs except the first;
as I love, fear and respect the magistrate—instead of I love, I fear and I respect. The connective substitute may sometimes be suppressed; as the man I saw, for the man whom I saw.

**Note**...In this particular of the connective substitute, authors often indulge an unwarrantable license. The use of *that* for *which* is obsolete and not justifiable. "We speak *that* we do know," is an original English phrase, but has ceased to be used by good writers.

The omission of the substitute in phrases like this—"There was an instance occurred"—for *which* occurred—is found in all our good authors—but it is so gross a violation of syntax, without utility or pretext of any kind, that every writer should avoid it.

5. The verb may often be omitted; as he is wise and virtuous—that is, he is wise, he is virtuous. They go to see and be seen—that is, they go to see, they go to be seen.

After *hence, thence* and *whence* a verb is often omitted without occasioning obscurity—as "Hence the flood of vice which overspreads the land!"

The auxiliars often supply the place of a principal verb; as John loves money better than you do; John has read more books than Peter has [read]; John shall go, but Peter shall not [go].

5. A modifier need not be repeated with every word which it qualifies, the connective and rendering it unnecessary; as he spoke and acted gracefully. Here gracefully belongs to *speaking* as well as to *acting*.

A preposition may be omitted after a connective; as He walked over the hills and the valleys—that is, *over* the valleys.

After *like* and *near, to* is usually omitted; as "Like three distinct powers in mechanics"—*Black* s. *Com.* 1. 2. That is, *like to three*—"Such opinions as seemed to approach nearest the truth"—*Enghedd.* 2. 59—that is, nearest to the truth.

Likewise after *join* and *adjoint, to* is sometimes omitted; as "a garden adjoining the river."

*For* is omitted by the poets after *mourn*.

"He mourn'd no recreant friend, no mistress coy.*"—*Bratf*. 

**Note**...The common rule respecting connectives is, that they join like *modes and tenses*, as well as like *cases*; or if the *tense or mode* is changed, the nominative to the additional verb must be.
repeated. But this is often false. "He lives temperately and he has long lived temperately," is an instance in which the repetition of the nominative is alleged to be indispensable. This I apprehend to be a great mistake—"the sentence is more correct, as well as more easy and familiar, without the last nominative. So when we pass from the affirmative to the negative or from the negative to the affirmative, the subject or nominative is said to be always resumed. This is doubtless an egregious error—He is rich, but he is not respectable," is not so common a sentence, as "he is rich, but not respectable." The general rule respecting the ellipsis, is, that a word may always be suppressed, when the omission occasions no obscurity or ambiguity. "He is indolent and therefore will be poor," is perfectly good English. But let the rule be put to the test of authorities.

"Not that he is or ever was, obliged by these statutes to call a new parliament every year." Blacke. Com. b. 1. 2.

Is this incorrect? No man will pretend that this is not an authorized idiom and perfectly correct. And how shall we supply the ellipsis? Not that he is or he ever was! What sort of language is this?

"For when a man says gold is malleable, he means and would insinuate something more than this." Locke. b. 3. ch. 10. 17.

What necessity is there of repeating the nominative before would? Not the least. It is impossible to improve the perspicuity of the sentence.

"That they have contributed and will probably yet contribute in a considerable degree to the abridgment of labor—Miller's retrospect, vol. 1. 390.

"But whatever they were or are." Burke. Reflections on the Fr. rev. 72.

"The whole has been done under the auspices, and is confirmed by the sanction of religion and piety." ibm.

"It has opened and will more and more open their eyes," ibm. 84.

"If I have been born, or dwell or have served an apprenticeship in one town." Payley. Phil. b. 8. 7.

"He neither reserves nor can give delight." Johnson.

"Cowper's exhortation—is not inferior to similar exhortation— in the accomplished translator of Tansillo's poem, the Nurse, by which these enchanting writers have induced, and will continue to induce, so many mothers," &c. Life of Cowper. Will any person say, this latter sentence is not correct? How will the grammarian supply the nominative? It cannot be done, without repeating a part of the preceding clause—by which these enchanting writers have induced, and by which they will continue to induce.—And of what use is this repetition? Does it add any thing to perspicuity
or elegance? Not the least.—Nothing can show, in a stronger light, the fallacy of the rule.

"The philosopher who hath busied himself in considering their natures, and thinks he knows how far, &c." Locke b. 2, ch. 8. 3.

Here a repetition of the nominative who before thinks, would improve the structure of the sentence, but is by no means indispensable.

"These are the fountains of knowledge, from whence all the ideas we have or can have, do spring." Locke 2. 1.

"I neither do nor can comprehend all I would." ibid. 2. 17.

In the two last examples, the repetition of the nominative, instead of improving, would impair the structure of the sentences.

It should however be observed, that the distinction between the Indicative and the Potential Mode in our language, is not well founded—at least as it regards the grammatical construction—The potential is in fact an Indicative or Declarative mode, unless when the conditional signs are used—and might more correctly be called the Potential Indicative. Certain it is that the connectives unite the Indicative and potential modes, in our language, without a nominative repeated, just as well as they join two verbs in the same tense and mode.

The truth seems to be, men learn rules and apply them almost as mechanically as a parrot—without attending to their correctness or applicability. The rule under consideration was copied from the Latin Grammar and applied to the English Language, without first settling the question, whether in English we have a potential mode or not—a question not fully determined. And how can it be expected that rules should be correct, when the essential preliminary question, concerning the subjects to which they are applicable, has not been settled?

The mischiefs resulting from such a vague manner of instituting Grammar rules, will be fully seen in the perpetual confusion of tenses which recur in almost every author. We are told that conjunctions connect like tenses and modes—and whether is a conjunction. Let us see the consequence "If I should ask any one, whether ice and water were two distinct species of things." Locke 5. 6. 18.

To resolve this sentence by common grammars, we are to say, that should ask is a verb in the imperfect tense of the subjunctive mode, whether is a conjunction, and were, a verb connected with ask by that conjunction. And what sort of language is this—"If I should ask"—a contingent event or hypothesis—of course the time future—"Whether ice and water were two distinct things" that is, were, in time past, and perfectly past; for were by itself never denotes time imperfectly past?

In this way, the author is led to write what he never intended—sheer nonsense. The verb was intended to express a fact of general existence—one which is always true or false—that is, the identity or diversity of ice and water—a fact existing in nature, and ther-
fore to be mentioned in the present tense indefinite—"Whether
ice and water are two distinct substances."

"It would seem that inquietude was as natural to it as its fluidi-
ty." Golds. An. Nat. ch. 17.—Here is a similar mistake—the use of
the first verb in what is called past time, leading the author to use
a second verb in the same tense—But that is no connective, any
more than every substitute in the language—The inquietude of
the ocean is a natural property, existing at all times—and the author
meant the verb to express that idea. "It would seem that inquietu-
tude is as natural to the sea as its fluidity." To show this to be the
real construction, let the order of the words be changed. "Inqui-
etude was as natural to the sea as its fluidity—that would seem."
This arrangement exhibits the mistake in its true light.—Let the
reader attend to the following passages.

"If my readers will turn their thoughts back on their old friends,
they will find it difficult to call a single man to remembrance, who
appeared to know that life was short, [is short] till he was about
lose it." Rambler. No. 71.

"Upon this supposition the alchemists went, who, supposing
that—all bodies were [are] composed of salt, sulphur and mer-
cury." Encyclop. art. Chemistry. 25.

"They considered the body as a hydraulic machine, and the
fluids as passing through a series of chemical changes; forgetting
that animation was [is] its essential characteristic." Darwin. Zoon.
prof.

"A stranger to the poem would not easily discover that this was
[is] verse." Murray's Grammar.

"From the figure and movements of the feathered tribes, we
should be led to imagin that the structure of their organs was [is]
extremely different from that of quadrupeds—their economy and
way of living required [require] some variations of their frame."
Smellie Phil. of Nat. Hist. p. 71.

"Supposing Parliament had a right to meet spontaneously—and
if half of the members met [should meet] and half absent [should
absent] themselves, who shall determin which is the legislative
body?" Blacks. Com. 12.

"Two more were stationed in Dalmatia, in a situation, if a war
broke [should break] out at their back, to support the other legions;
and if a sudden emergence required [should require] their presence,
ready to advance by rapid marches into Italy." Murphy Tacitus.
1. 264.

NOTE 2. The employment of these verbs by the translator is the
less excusable, as he had the original to guide him to the true
sense"—qua—si reptentum auxilium Italia posceret, haur praelud
accintum."

If Italy should require sudden aid—the legions might
be called from a small distance. It is however some apology for
the author, that the Latin imperfect tense has been misnamed or
left unexplained, and is as little understood by means of grammar
rules, as the English tenses.

Examples of this mistake may be cited without end—but those
which I have collected are amply sufficient to show the miserable
state of grammatical knowledge. How easy would it have been
to detect these blunders, had the parts of speech been understood,
and properly classed? Take for example, the passage from Mur­
ray—and resolve it according to the explanation of that which is
given in the preceding pages—"This was verse—a stranger to the
poem would not easily discover that. What nonsense! But cor­
rect the verb. "This is verse—a stranger would not easily discover
that." The whole error has arisen probably from considering that
as a conjunction—when in fact it is a representative of the follow­
ning member of the period—and the sentence is found to consist of
two clauses—one hypothetical the other declaratory—"A stranger
to the poem, (if he should attempt) would not easily discover that
—this is verse."

From the practice of connecting like tenses, probably has arisen
a similar misapplication of tenses, where no connective is used ;
as "In this way we might indicate which of their elements existed

"It would be true gold to him and belong to that species, who
included malleableness in his nominal essence." Locke. 3. 6. 35.
It ought to be who should include. A similar mistake in the fol­
lowing passage is really ludicrous—"I said to him that he should
rebuild the Greek cities and give them wise laws, until a proper
time arrived to restore them to liberty." Anarch. 3. 231. It
ought to be should arrive.

A few authors led by their own sense of right and wrong, [for
surely they have had no Grammar to guide them] have occasion­
ally avoided these errors and written the language with correct­
ness. And among these is the translator of Anacharsis, with­
standing the mistake just cited.

"They said that man is an animal." Anarch. vol. 4. note.
"He told us that these birds are natives of Samos." ibn. ch. 74.
"Sabellius, who openly taught that there is but one person in the
Godhead." Encyc. art. Sabellius.
"His master had taught him that happiness consists in virtue."  
Anarch. ch. 7.

"D. Laertius says, the Egyptians taught that matter is the first
"Anaxagoras affirmed that a pure mind governs the universe."  
ibn. ch. 3. & 2.

If we examine these sentences, we shall find the time correctly
affirmed in each member—The first declares a fact past—the last,
a fact now existing, as well as when the affirmation was made.

"He told us that, these birds are natives of Samos"—or accord­
going to the idea before explained"—these birds are natives of
Samos—he told us that—
Man is an animal—they said that—happiness consists in virtue—his master taught him that.

I have been the more particular in illustrating this part of my subject, to show the necessity of tracing the idioms to their true source, of understanding the principles of construction, and of calling the parts of speech by their true names.

**Punctuation.**

Punctuation is the marking of the several pauses which are to be observed, in reading or speaking a sentence or continued discourse. By means of pauses, a discourse is divided into periods or complete sentences, and periods into clauses or simple sentences, and these, into phrases.

A period is a sentence complete, making perfect sense, and not connected in construction with what follows. The pause after the period is marked by a point [.] and in speaking, is distinguished by a cadence or fall of the voice.

The members of a period, or clauses and phrases, are all more or less connected in sense, and according to the nearness of the connection, are marked by a comma [;] a semicolon [:] or a colon [:].

The comma is the shortest pause, and is often used to mark the construction, where very little interruption of voice is allowable.

A simple sentence or clause contains an affirmation, a command or a question, that is, one personal verb, with its nominative and adjuncts. By adjunct, is meant any phrase or number of words added by way of modifying or qualifying the primary words. Thus when it is said, "Cicero was an orator of a diffuse style," the latter words, of a diffuse style, are the adjunct of orator, and the whole forms a complete simple sentence, with one verb or affirmation.

A phrase contains no assertion, or does not amount to a proposition.

**COMMA.**

**Rule. I.** In general the parts of a simple sentence or clause are not to be separated by any point whatever; as
Hope is necessary in every condition of life." But when a simple sentence is long, or contains a distinct phrase or phrases, modifying the affirmation, it may be divided by a comma; as "To be very active in laudable pursuits, is the distinguishing characteristic of a man of merit." "By revenging an injury, a man is but even with his enemy." In most cases, where a short pause will give distinctness to ideas, a comma is well placed after an important word; "To mourn without measure, is folly; not to mourn at all, insensibility."

The pause after measure, in this sentence is essential to the strength of the expression. "The idea of beauty is vague and undefined, different in different minds, and diversified by time or place." Rambler.

RULE II. When a connective is omitted between two or more words, whether names, attributes, substitutes, verbs or modifiers, the place is supplied by a comma; as "Love, joy, peace and blessedness are reserved for the good." "The miseries of poverty, of sickness, of captivity, would, without hope, be insupportable." Rambler.

"We hear nothing of causing the blind to see, the lame to walk, the deaf to hear, the lepers to be cleansed." Paley.

"He who loves, serves and obeys his maker is a pious man." "Industry steadily, prudently and vigorously pursued, leads to wealth." "David was a brave, martial, enterprising prince." "The most innocent pleasures are the most rational, the most delightful and the most durable."

RULE III. Two or more simple sentences closely connected in sense, or dependent on each other, are separated by a comma only; as "When our vices leave us, we flatter ourselves we leave them." "The temperate man's pleasures are durable, because they are regular." "That all the duties of morality ought to be practiced, is without difficulty discoverable, because ignorance or uncertainty would immediately involve the world in confusion and distress." Rambler. 81.
Rule IV. The sentence independent, detached affirmations or phrases involved in sentences, and other important clauses, must be separated from the other parts of a sentence, by a comma; as "The envoy has returned, his business being accomplished." "The envoy, having accomplished his business, has returned." "Providence has, I think, displayed a tenderness for mankind"—Rambler. "The decisions of patronage, who was but half a goddess, had been sometimes erroneous." Rambler. "The sciences, after a thousand indignities, retired from the palace of patronage." ibm. "It is, in many cases, apparent." ibm.

Rule V. A comma is often required to mark contrast, antithesis, or remarkable points in a sentence, and sometimes very properly separates words closely dependent in construction; as "a good man will love himself too well to lose, and his neighbor too well to win, an estate by gaming." "Prosperity gains friends, and adversity tries them." "It is harder to avoid censure, than to gain applause."

"Tho deep, yet clear; tho gentle, yet not dull."

Rule VI. A single name in apposition is not separated by a comma; as "the Apostle Peter"—but when such name is accompanied with an adjunct, it should be separated; as "Parmenio, a friend of Alexander's, hearing the great offers that Darius had made, said, "Were I Alexander, I would accept them." "So would I," replied Alexander, were I Parmenio."

Rule VII. Terms of address, and words of others repeated, but not introduced as a quotation, are separated by a comma; as "Wherefore, Sirs, be of good cheer." "My son, hear the counsel of thy father." "Thus shalt thou say unto the children of Israel; I AM hath sent me unto you." Exodus.

Rule VIII. Modifying words and phrases, as however, nay, hence, besides, in short, finally, formerly, &c. are usually separated by a comma; as "It is, however, the task of criticism to establish principles." Rambler.
SEMICOLON.

The semicolon is placed between the clauses of a period, which are less closely connected than such as are separated by a comma.

First. When the first division of a sentence completes a proposition, so as to have no dependence on what follows; but the following clause has a dependence on the preceding, the two parts are separated generally by a semicolon; as "It may be laid down as a maxim, that it is more easy to take away superfluities than to supply defects; and therefore he that is culpable, because he has passed the middle point of virtue, is always accounted a fairer object of hope, than he who fails by falling short." Rambler. In this sentence the part of the sentence preceding the semicolon is a perfect period in itself, and might have been closed with a full point; but the author has added another division, by way of inference, and this is dependent on the first division. The author proceeds—"The one has all that perfection requires, and more, but the excess may be easily retrenched; the other wants the qualities requisite to excellence"—Here the first division makes a complete proposition; but the antithesis begun by the numeral one, is not complete, without the last division.

"Economy is no disgrace; for it is better to live on a little, than to outlive a great deal."

"Be in peace with many; nevertheless, have but one counsellor of a thousand."

"A friend cannot be known in prosperity; an enemy cannot be hid in adversity."

In general then, the semicolon separates the divisions of a sentence, when the latter division has a dependence on the former, whether the former has a dependence on the latter or not.

Secondly. When several members of a sentence have a dependence on each other, by means of a substitute for
the same principal word, and the clauses, in other respects, constitute distinct propositions, the semicolon may be used; as "Wisdom hath built her house; she hath hewn out her seven pillars; she hath killed her beasts; she hath mingled her wine; she hath also furnished her table." Prov. 9.

COLON.

The Colon is used when the sense of the division of a period is complete, so as to admit of a full point, but something is added by way of illustration; as "A brute arrives at a point of perfection that he can never pass: in a few years he has all the endowments he is capable of; and were he to live ten thousand more, would be the same thing he is at present." Spect. No. 111.

NOTE. This point is of little use; the difference between the colon and semicolon is so small, that the two pauses are frequently confounded, as may be seen in our present version of the Proverbs. It is said that a colon should be placed before a quotation; but I consider the use of the semicolon as preferable. I conceive the colon might be rejected without injury to the perspicuity of sentences; and punctuation very much simplified, by substituting the semicolon and the full point. That slight dependence of a subsequent sentence upon a preceding one, which is marked by a colon, is also marked by the full point; for we are not to suppose a full point precludes a connection between sentences. Let the following sentences from the Rambler No. 31, be cited as an example.

"With the great and ambitious, I would discourse of honors and advancements.—To the rich I would tell of inexhaustible treasures and the sure method to attain them. I would teach them to put out their money on the best interest, and instruct the lovers of pleasure how to secure and improve it to the highest degree. The beauty should learn of me how to preserve an everlasting bloom.—To the afflicted I would administer comfort, and relaxation to the busy."

All the parts of a continued discourse are connected; and often by such nice grades of dependence, that it is not easy to discern, much less to mark the minute distinctions. I have never examined any author, whose use of the points is either accurate or uniform; and in particular the colon is everywhere confounded with the semicolon or the period.
PERIOD.

The Period or full point marks a completion of the sense, a cadence of the voice, and the longest pause used between sentences. It closes a discourse also, or marks a completion of a subject, chapter or section.

The full point is used also after initials when used alone; as after N. S. for New Style; and after abbreviations; as Croc. Anglic, for Crocus Anglicanus.

To these may be added,

The dash—which marks a break in the sentence or an abrupt turn; as “If thou art he—but O how fallen!”

The interrogation point? that closes a sentence which asks a question; as “How long, ye simple ones, will ye love simplicity?”

The exclamation point! which is used after sudden expressions of surprise, or other emotions; as “O happiness! Our being’s end and aim!”

The parenthesis ( ) and hooks [ ] include a remark or clause, not essential to the sentence in construction, but useful in explaining it or introducing an important idea. They mark a moderate pause, and the clause included is read with a depressed tone of voice; as

“Know then this truth (enough for man to know) Virtue alone is happiness below.” Pope.

It will be readily seen that the sentence is not at all dependent on the parenthetical clause; but the converse is not true, for that clause has a dependence more or less remote on the sentence. Thus, enough for man to know, is not intelligible without connecting it with the parts of the sentence preceding and following. So in this passage; “If any one pretends to be so sceptical, as to deny his own existence (for really to doubt of it, is manifestly impossible) let him enjoy his beloved happiness”—Locke. 4. 10. 2. The included clause here is connected with the preceding part of the sentence, and it, is a substitute for existence.

With regard to the duration of the pauses, it may be observed that the comma, semicolon, colon and full point, may bear to each other the proportion of one, two, four and
six; and the interrogation point and exclamation point may be considered each as equal in time to the colon or period. But no precise rule can be given which shall extend to every case; the length of the pauses must depend much on the nature of the discourse, and their respective proportions may be often varied to advantage by a judicious speaker.

**Prosody.***

**Prosody** is that part of Grammar which treats of the pronunciation of words, and the laws of versification.

Pronunciation is regulated principally by **accent** and **quantity**.

**Accent** is a particular stress of voice with which a certain syllable of a word is uttered, and by which it is distinguished from the others. Thus, in pronouncing *probability*, we lay a greater stress of voice upon the third syllable, than upon the others—the voice naturally resting upon that, and passing over the others with *rapidity* and a slight enunciation. This stress of voice on a particular part of a word, is equally necessary to the ease of utterance and the melody of speaking.

In addition to the accent which may be called primary, there is, in pronouncing words of many syllables, a secondary accent, less distinct than the principal accent, but evidently distinguishing some one syllable from those which are unaccented. Thus in the word *indiscriminate*, the principal accent is on the third syllable; but the first syllable is evidently uttered with more force of voice, than the second and two last syllables. The final cause of both accents

---

* The substance of the remarks under this head was published more than twenty years ago. For some of the observations I am indebted to Sheridan’s *Art of Reading*; but for more of them, to the Honorable John Trumbull, Esq. one of the judges of the Supreme Court of Connecticut. His rules of metrical composition, originally published in my Grammar and afterwards in my Dissertations on the English Language, are probably the best which have been written.
is the case of pronunciation; and by this, should both be regulated; for that manner of pronouncing words which is most easy for the speaker, enables him to utter the several syllables with the most distinctness, which is consistent with a rapid communication of thoughts; and this is necessary to render his enunciation agreeable to his hearers. Hence no rules of pronunciation drawn from the termination of words, from their etymologies, or from the practice of popular speakers, should be suffered to interfere with this fundamental principle—the case of utterance—for a forced, unnatural accent is not only painful to the speaker, but utterly destructive of melody.

The accent may fall on a vowel or on a consonant. When, it falls on a vowel, the vowel is long—as in glory, table, lawful. When it falls on a consonant, the consonant closes the syllable, and the preceding vowel is short; as in habit, gratitude, deliverance.*

* It may be thought that I am captious in criticising the works of English authors, or of others who have written on this subject, but the propriety of detecting error, wherever found, supersedes the necessity of apology.

It has been the practice of most English authors to place the marks of accent, in all cases, over the vowel of the accented syllable—a practice probably borrowed from the Greek language. Thus in Johnson's Dictionary, the vowel *a* in habit as well as *o* in holy, has the mark of accent, for which reason the mark is no guide to the true sound of the letter, and a learner would be led to give to *a* its long sound thus, habit—as well as to *o* its long sound in holy.

But this is not the worst evil. The rules for dividing syllables, from Dilworth to Murray, are not only arbitrary, but false, and absurd. They contradict the very definition of a syllable given by the authors themselves. Thus Lowth, defines a syllable to be "a sound either simple or compounded, pronounced by a single impulse of the voice, and constituting a word or part of a word." This definition is copied and followed by Murray. But in dividing syllables, no regard is had to the definition—for manifest.—Lowth divides thus manifest. Here the first syllable man is pronounced with a single impulse of the voice—according to the definition; yet in writing, the syllable is split—the constituent part of a word, is divided into two parts—that which is to be pronounced with a single impulse of the voice, is so separated, as to require two impulses. A syllable in pronunciation is an indivisible thing; and strange as it may appear, what is indivisible in utterance, is divided in writing;
The quantity of a syllable is the time in which it is pronounced. In English this time is long or short—long as in frame, denote, compensation—short, as in that, not, melon.

The accent has no small influence in determining the length of a syllable, by prolonging the sound of the vowel; but, in many words, vowels have their long sound, tho not under the accent, as in nosegay, agitate.

There are some general rules for accenting syllables, which may be discovered by attending to the analogy of formation. Thus words ending in tion and sion have the accent on the last syllable save one; as protection, adhesion; words ending in ty usually have the accent on the last syllable except two, as vanity, hostility.

Few of these rules however are so general, that the exceptions to them are not almost as numerous as the words which fall within the rule; and therefore the accent of words is best learnt from a dictionary, and general usage.

The rules laid down for this purpose in several works of distinction, are so numerous and subject to many exceptions, that they tend rather to embarrass, than to assist the student.

Most prosodians who have treated particularly of this subject, have been guilty of a fundamental error, in considering the movement of English verse as depending on long and short syllables, formed by long and short vowels. This hypothesis has led them into capital mistakes. The truth is, many of those syllables which are considered as long in verse, are formed by the shortest vowels in the language; as strength, health, grand. The doctrine, that long vowels are requisite to form long syllables in poetry, is at length exploded, and the principles which regulate the movement of our verse, are explained; viz. accent and emphasis. Every emphatical word, and every accented syllable, will form what is called in verse, a long syllable. The unaccented syllables, and unemphatical monosyllabic words, are considered as short syllables.

When the very purpose of dividing words into syllables in writing, is to lead the learner to a just pronunciation. Thus Murray, tho he admits that a "syllable is short, when the accent is on the consonant" yet separates that consonant from the syllable—as in melon—ci-vil—ti-mid. Most of the English elementary books which I have seen are able to the same objection.
But there are two kinds of emphasis; a natural emphasis, which arises from the importance of the idea conveyed by a word; and an accidental emphasis, which arises from the importance of a word in a particular situation.

The first or natural emphasis belongs to all nouns, verbs, participles and adjectives, and requires no elevation of the voice; as,

"Not half so swift the trembling doves can fly."

The last or accidental emphasis is laid on a word when it has some particular meaning, and when the force of a sentence depends on it; this therefore requires an elevation of the voice; as,

"Perdition catch my soul—but I do love thee."

So far the prosody of the English language seems to be settled; but the rules laid down for the construction of verse, seem to have been imperfect and disputed.

Writers have generally supposed that our heroic verse consists of five feet, all pure Iambics, except the first foot, which they allow may be a Trochee. In consequence of this opinion, they have expunged letters from words which were necessary; and curtailed feet in such a manner as to disfigure the beauty of printing, and in many instances, destroyed the harmony of our best poetry.

The truth is, so far is our heroic verse from being confined to the Iambic measure, that it admits of eight feet, and in some instances of nine. I will not perplex my readers with a number of hard names, but proceed to explain the several feet, and show in what places of the line they are admissible.

An Iambic foot, which is the ground of English numbers, consists of two syllables, the first short and the second long. Example, all Iambics.

"Where slaves once more their native land behold,
   No fiends torment, no Christians thirst for gold."
   Pope

The Trochee is a foot consisting of two syllables, the first long and the second short. Example.
"Warms in the sun, refreshes in the breeze,
Glow in the stars, and blossoms in the trees."

Pope.

The Trochee is not admissible into the second place of the line; but in the third and fourth it may have beauty, when it creates a correspondence between the sound and sense.

"Eve rightly call'd mother of all mankind."
"And staggered by the stroke, drops the large ox."

The Spondee is a foot consisting of two long syllables. This may be used in any place of the line.

1. "Good life be now my task, my doubts are done."
   Dryden.

2. "As some lone mountain's monstrous growth he stood."
   Pope.

But it has a greater beauty when preceded by a Trochee.

"Load the tall bark and launch into the main."
"The mountain goats bounding o'er the lawn."
"He spoke, and speaking in proud triumph spread, The long contended honors of her head."

Pope.

3. "Singed are his brows, the scorching lids glow."

Pope.

The Pyrrhic is a foot of two short syllables; it is graceful in the first and fourth places, and is admissible into the second and third.

1. "Nor in the helpless orphan dread a foe."
   Pope.

2. "On they move, Indissolubly firm."
   Milton.

3. "The two extremes appear like man and wife, Coupled together for the sake of strife."
   Churchill.

But this foot is most graceful in the fourth place.

"The dying gales that pant upon the trees."
"To farthest shores the ambrosial spirit flies,
Sweet to the world and grateful to the skies."

The Amphibrach is a foot of three syllables, the first and third short, and the second long. It is used in heroic verse only when we take the liberty to add a short syllable to a line.

"The piece you say is incorrect, why take it,
"I'm all submission, what you'd have it, make it."

This foot is hardly admissible in the solemn or sublime style. Pope has indeed admitted it into his Essay on Man:

"What can ennoble sots or slaves or cowards,
Alas! not all the blood of all the Howards."

Again:

"To sigh for ribbands, if thou art so silly,
Mark how they grace Lord Umbra or Sir Billy."

But these lines are of the high burlesque kind, and in this style the Amphibrach closes lines with great beauty.

The Tribrach is a foot of three syllables, all short.

"And rolls impetūōs to the plain."

Or thus:

"And thunders down impetūōs to the subject plain."

The Dactyl, a foot of three syllables, the first long and the two last short, is used principally in the first place in the line.

"Fũōs he spoke, the angry chief replied."

"Mūrrūring, and with him fled the shades of night."

The Anapest, a foot consisting of three syllables, the two first short and the last long, is admissible into every place of the line.

"Can a bosom so gentle remain,
Unmoved when her Corydon sighs?
Will a nymph that is fond of the plains,
These plains and these valleys despise!
Dear regions of silence and shade,
Soft scenes of contentment and ease,
Where I could have pleasingly stay'd,
If ought in her absence could please."

The trisyllabic feet have suffered most by the general ignorance of critics; most of them have been mutilated by apostrophies, in order to reduce them to the iambic measure.

Thus in the line before repeated,
"Murmuring, and with him fled the shades of night,"
we find the word in the copy reduced to two syllables, mur'm'ring, and the beauty of the Dactyl is destroyed.

Thus is the following:
"On every side with shadowy squadrons deep,"
by apostrophizing every and shadowy, the line loses its harmony. The same remark applies to the following.

"And hosts infuriate shake the shudd'ring plain."
"But fashion so directs, and moderns raise
On fashion's mould'ring base, their transient praise."

Churchill.

Poetic lines which abound with these trisyllabic feet, are the most flowing and melodious of any in the language; and yet the poets themselves, or their printers, murder them with numberless unnecessary contractions.

It requires but little judgment and an ear indifferently accurate, to distinguish the contractions which are necessary, from those which are needless and injurious to the versification. In the following passage we find examples of both.

"She went from op'ra, park, assembly, play,
To morning walks and pray'rs, three times a day;
To pass her time 'twixt reading and bohea,
To muse and spill her solitary tea;
Or o'er cold coffee trifle with the spoon,
Count the slow clock, and dine exact at noon;
Divert her eyes with pictures in the fire,
Hum half a tune, tell stories to the 'squire;
Up to her godly garret after sev'n,
There starve and pray, for that's the way to heav'n."

Pope's Epistles.*
Here e in opera ought not to be apostrophized, for such a contraction reduces an Amphibrachic foot to an Iambic. The words prayers, seven and heaven need not the apostrophe of e; for it makes no difference in the pronunciation. But the contraction of over and betwixt is necessary; for without it the measure would be imperfect.

PAUSES.

HAVING explained the several kinds of feet, and shown in what places of a verse they may be used, I proceed to another important article, the pauses. Of these there are two kinds, the cesural pause, which divides the line into two equal or unequal parts; and the final pause which closes the verse. These pauses are called musical, because their sole end is the melody of verse.

The pauses which mark the sense, and for this reason are denominated sentential, are the same in verse as in prose. They are marked by the usual stops, a comma, a semicolon, a colon, or a period, as the sense requires, and need no particular explanation.

The cesural pause is not essential to verse, for the shorter kinds of measure are without it; but it improves both the melody and the harmony.

Melody in music is derived from a succession of sounds: harmony from different sounds in concord. A single voice can produce melody; a union of voices is necessary to form harmony. In this sense harmony cannot be applied to verse, because poetry is recited by a single voice. But harmony may be used in a figurative sense, to express the effect produced by observing the proportion which the members of verse bear to each other.

The cesural pause may be placed in any part of the verse: but has the finest effect upon the melody, when placed after the second or third foot, or in the middle of the third. After the second:

“In what retreat, inglorious and unknown,
Did genius sleep, when dullness seized the throne.”

* Sheridan’s Art of Reading.
After the third:

"O say what stranger cause, yet unexplored,
Could make a gentle belle reject a lord?"

In the middle of the third:

"Great are his perils, in this stormy time,
Who rashly ventures, on a sea of rhyme."

In these examples we find a great degree of melody, but not in all the same degree. In comparing the divisions of verse, we experience the most pleasure in viewing those which are equal; hence those verses which have the pause in the middle of the third foot, which is the middle of the verse, are the most melodious. Such is the third example above.

In lines where the pause is placed after the second foot, we perceive a smaller degree of melody, for the divisions are not equal; one containing four syllables, the other six, as in the first example.

But the melody in this example, is much superior to that of the verses which have the cesural pause after the third foot; for this obvious reason: When the pause bounds the second foot, the latter part of the verse is the greatest, and leaves the most forcible impression upon the mind; but when the pause is at the end of the third foot, the order is reversed. We are fond of proceeding from small to great, and a climax in sound pleases the ear, in the same manner as a climax in sense delights the mind. Such is the first example.

It must be observed further, that when the cesural pause falls after the second and third feet, both the final and cesural pauses are on accented syllables; whereas when the cesural pause falls in the middle of the third foot, this is on a weak syllable, and the final pause, on an accented syllable. This variety in the latter, is another cause of the superior pleasure we derive from verses divided into equal portions.

The pause may fall in the middle of the fourth foot; as,

"Let favor speak for others, worth for me:"

but the melody, in this case, is almost lost. At the close of the first foot, the pause has a more agreeable effect.
"That's vile, should we a parent's fault adore,
And err, because our fathers err'd before?"

In the middle of the second foot, the pause may be used, but produces little melody.

"And who but wishes to invert the laws
Of order, sins against the eternal cause."

Harmony is produced by a proportion between the members of the same verse, or between the members of different verses. Example:

"Thy forests, Windsor, and thy green retreats,
At once the monarch's, and the muse's seats,
Invite my lays. Be present sylvan maids,
Unlock your springs, and open all your shades."

Here we observe, the pause in the first couplet, is in the middle of the third foot; both verses are in this respect similar. In the last couplet, the pause falls after the second foot. In each couplet, separately considered, there is a uniformity; but when one is compared with the other, there is a diversity. This variety produces a pleasing effect.* The variety is further increased, when the first lines of several succeeding couplets are uniform as to themselves, and different from the last lines, which are also uniform as to themselves. Churchill, speaking of reason, lord chief justice in the court of man, has the following lines.

"Equally form'd to rule, in age or youth,
The friend of virtue, and the guide to truth;
To her I bow, whose sacred power I feel,
To her decision make my last appeal;
Condemn'd by her, applauding worlds in vain
Should tempt me to take up my pen again;
By her absolv'd, the course I'll still pursue;
"If Reason's for me, God is for me too."

The first line of three of these couplets, has the pause after the second foot; in this consists their similarity. The last

---

* Sheridan.

U
line in three of them, has the pause in the middle of the third foot; they are uniform as to themselves, but different from the foregoing lines. This passage, which on the whole is very beautiful, suffers much by the sixth line, which is not verse, but rather hobbling prose. *

The foregoing remarks are sufficient to illustrate the use and advantages of the cesural pause.

The final pause marks the close of a line or verse, whether there is a pause in the sense or not. Sentential pauses should be marked by a variation of tone; but the final pause, when the close of one line is intimately connected with the beginning of the next, should be merely a suspension of the voice without elevation or depression. Thus:

"Of man's first disobedience, and the fruit
Of that forbidden tree, whose mortal taste
Brought death into the world, and all our woes," &c.

When these lines are read without a pause after the words "fruit" and "taste," they degenerate into prose. Indeed in many instances, particularly in blank verse, the final pause is the only circumstance which distinguishes verse from prose.

EXPRESSION.

One article more in the construction of verse deserves our observation, which is Expression. Expression consists in such a choice and distribution of poetic feet as are best adapted to the subject, and best calculated to impress sentiments upon the mind. Those poetic feet, which end

* Churchill has improved English versification, but is sometimes too incorrect. It is a remark of some writer, "That the greatest geniuses are seldom correct," and the remark is not without foundation. Homer, Shakespeare, and Milton, were perhaps the greatest geniuses that ever lived, and they were certainly guilty of the greatest faults. Virgil and Pope were much inferior in point of genius, but excelled in accuracy. Churchill had genius, but his contempt of rules made him sometimes indulge a too great latitude of expression.
in an accented syllable, are the most fitable. Hence the Iambic measure is best adapted to solemn and sublime subjects. This is the measure of the Epics, of poems on grave moral subjects, of elegies, &c. The Spence, a foot of two long syllables, when admitted into the Iambic measure, adds much to the solemnity of the movement.

"While the clear sun, rejoicing still to rise,
In pomp rolls round inmeasurable skies."  

The Dactyl, rolls round, expresses beautifully the majesty of the sun in his course.

It is a general rule, that the more important syllables there are in a passage, whether of prose or verse, the more heavy is the stile. For example:

"A past, vamp'd, future, old, reviv'd new piece."

"Men, bearded, bald, cowl'd, uncowl'd, shod, unshod."

Such lines are destitute of melody, and are admissible only when they suit the sound to the sense. In the high burlesque style, of which kind is Pope's Dunciad, they give the sentiment an ironical air of importance, and from this circumstance derive a beauty. On the other hand, a large proportion of unaccented syllables or particles, deprives language of energy; and it is this circumstance principally which in prose constitutes the difference between the grave historical, and the familiar style. The greatest number of long syllables ever admitted into heroic verse is seven, as in the foregoing; the smallest number is three.

"Or to a sād variety of wēs."

The Trochaic measure, in which every foot closes with a weak syllable, is well calculated for lively subjects.

"Softly sweet in Lydian measures,
Soon he sooth'ed his soul to pleasures;
War he sung is toil and trouble,
Honor but an empty bubble," &c.

The Anapaestic measure, in which there are two short syllables to one long, is best adapted to express the impet-
usity of passion or action. Shenstone has used it to great advantage, in his inimitable pastoral ballad. It describes beautifully the strong and lively emotions which agitate the lover, and his anxiety to please, which continually hurries him from one object and one exertion to another.

"I have found out a gift for my fair,  
I have found where the wood pigeons breed;  
Yet let me that plunder forbear,  
She will say 'twas a barbarous deed.  
For he ne'er could prove true, she aver'd,  
Who could rob a poor bird of her young;  
And I lov'd her the more when I heard  
Such tenderness fall from her tongue."

The Amphibrachic measure, in which there is a long syllable between two short ones, is best adapted to lively comic subjects; as in Addison's Rosamond.

"Since conjugal passion  
Has come into fashion,  
And marriage so blest on the throne is,  
Like Venus I'll shine,  
Be fond and be fine,  
And Sir Trusty shall be my Adonis."

Such a measure gives to sentiment a ludicrous air, and consequently is ill adapted to serious subjects.

Great art may be used by a poet in choosing words and feet adapted to his subject. Take the following specimen.

"Now here, now there, the warriors fall; amain  
Groans murmur, armor sounds, and shouts convulse the plain."

The feet in the last line are happily chosen. The slow Spondee, in the beginning of the verse, fixes the mind upon the dismal scene of woe; the solemnity is heightened by the pauses in the middle of the second and at the end of the third foot: But when the poet comes to shake the plains, he closes the line with three forcible Iambics.

Of a similar beauty take the following example.

"She all night long, her armorous descant sung."
The poet here designs to describe the length of the night, and the music of the Nightingale's song. The first he does by two slow spondees, and the last by four very rapid syllables.

The following lines, from Gray's Elegy, written in a country church yard, are distinguished by a happy choice of words.

"For who, to dumb forgetfulness a prey,
This pleasing anxious being set-sivsign'd?
Left the warm precincts of the cheerful day,
Nor cast one longing, lingering look behind?"

The words longing and lingering express most forcibly the reluctance with which mankind quit this state of existence.

Pope has many beauties of this kind.

"And grace and reason, sense and virtue split,
With all the rash dexterity of wit."

The mute consonants, with which these lines end, express the idea of rending asunder, with great energy and effect. The words rash and dexterity are also judiciously chosen.

In describing the delicate sensations of the most refined love, he is remarkable for his choice of smooth flowing words. There are some passages in his Eloisa and Abella[d], which are extended to a considerable length, without a single mute consonant or harsh word.

OF READING VERSE.

With respect to the art of reading verse, we can lay down but a few simple rules; but these may perhaps be useful.

1. Words should be pronounced as in prose and in conversation; for reading is but rehearsing another's conversation.

2. The emphasis should be observed as in prose. The voice should bound from accent to accent, and no stress
should be laid on little unimportant words, not on weak syllables.

3. The sentential pauses should be observed as in prose; these are not affected by the kind of writing, being regulated entirely by the sense. But as the cesural and final pauses are designed to increase the melody of verse, the strictest attention must be paid to them in reading. They mark a suspension of voice without rising or falling.

To read prose well it is necessary to understand what is read; and to read poetry well, it is further necessary to understand the structure of verse. For want of this knowledge, most people read all verse like the iambic measure. The following are pure iambics.

"Above how high progressive life may go! Around how wide, how deep extend below!"

It is so easy to lay an accent on every second syllable, that any schoolboy can read this measure with tolerable propriety. But the misfortune is, that when a habit of reading this kind of meter is once formed, persons do not vary their manner to suit other measures. Thus in reciting the following line.

" Loud the tall bark, and launch into the main;"

many people would lay the accent on every second syllable; and thus read, our poetry becomes the most monotonous and ridiculous of all poetry in the world.

Let the following line be repeated without its pauses, and it loses its principal beauty.

"Bold, as a hero, as a virgin mild."

So in the following.

"Reason, the card, but passion, is the gale."

"From storms, a shelter, and from heat, a shade."

The harmony is, in all these instances, improved much by the semipauses, and at the same time the sense is more clearly understood.

Considering the difficulty of reading verse, it is not surprising to find but few who are proficient in this art. A knowledge of the structure of verse, of the several kinds
PRACTICAL GRAMMAR.

of feet, of the nature and use of the final, the cesural and the semicessural pauses, is essential to a graceful manner of reading poetry; and even this without the best examples, will hardly effect the purpose. It is for this reason, that children should not be permitted to read poetry of the more difficult kind, without the best examples for them to imitate. They frequently contract, in early life, either a monotony or a sing song cant, which, when grown into a habit, is seldom ever eradicated.

Remarks on the received System of Grammar.

Lindley Murray has given, for a Praxis, or Example of Grammatical Resolution, the following sentence.

"The worthy Emperor Titus, recollecting once at supper, that in that day, he had not done any body a kindness, exclaimed, "Alas! my friends, I have lost a day."

Without reciting the resolution given of this sentence, a part of which is correct, I would observe that it contains three or four palpable errors. The first is, that the author calls the first that, a conjunction, when in fact it is a substitute or representative of the following member of the sentence—he had not done any body a kindness—recollecting that fact. It is, in the language of common grammars, a "demonstrative pronoun"—pointing directly to a whole declaration, or fact stated.

2. Any, before body, the author calls "an adjective pronoun"—and my before friends, "a possessive pronoun." A pronoun he defines to be "a word used instead of a noun," as all other writers have done before him. But what nouns do any and my stand for? My, if it stands for any thing, stands for of, me, friends of me; in which case, it stands for a pronoun and a preposition—or if it represents of Titus, it stands in the place of a noun and a preposition. As for any, the reader is left to exercise his invention in discovering the noun which it represents. Lowth calls any a definitive; and my a "pronominal adjective." The latter denomination is just—an adjective, or attribute formed from a pronoun. Johnson calls my a
"possessive pronoun"—but Lowth is the most correct. This is one of the many instances in which Lowth's grammar has been altered for the worse.

3. In the last clause of the sentence, Murray calls a, the indefinite article—"I have lost a day." A more suitable example cannot be selected to show the miserable state of our Grammars, and how mechanically men learn to repeat words without meaning and propositions which are false; moved, age after age, by the impulse of custom, in the common road of error. Titus, in the passage under consideration, recollected at supper that on that day, just ended, he had done no act of kindness—and exclaimed, I have lost a day. The last words a day are as determinate as possible—referring directly to the preceding description, on that day preceding the supper,—yet we are told that a is the indefinite article, used in a vague sense to point out one single thing of the kind, in other respects indeterminate. The truth is, a, in this clause of the sentence, denotes simply one—I have lost one day. Whether the day is determinate or indeterminate, is a circumstance not at all depending upon a.

There is an oversight in this resolution which deserves notice. In this clause—"he had not done any body a kindness"—the government of the words any body is omitted. Either done must govern two objects, or to is understood before any body—had not done to any body a kindness.

Another Example.

"Tha affliction be our lot, we may be the happier for it." In this sentence Murray calls the a conjunction. And what is a conjunction? "A conjunction, says Murray, is a part of speech that is chiefly used to connect or join together sentences, so as out of two to make one sentence; it sometimes connects only words." Again, "Conjunctions connect the same moods and tenses of verbs, and cases of nouns and pronouns."—I leave it to the compiler himself and his friends, to reconcile the example with the rule and definition; and to discover what is the connecting power of the, in the sentence cited.

Be, in the first part of the same sentence, "is a verb neuter," says the compiler, "present tense, third person sin-
PRACTICAL GRAMMAR.

Regular, in the subjunctive mood, being governed by the conjunction tho. Now it happens that tho is an obsolete verb, in the imperative mode, signifying grant or allow, and retaining precisely its original signification—"grant, affliction be our lot"—This explanation demonstrates the impropriety of the use of be—it ought to be is—according to popular usage, which delivers the language, from generation to generation, as it was made, and preserves it from corruption.

These examples are selected from Murray's Grammar, not with a view to prejudice the public against that work in particular; for it is a good compilation of the rules of grammar, which have been heretofore received. My design is only to expose the errors and defects of the system, which teaches rules that are false or words without meaning.

A PRAXIS.

Or Example of Grammatical Resolution.

"If the excellence of Dryden's works was lessened by his indigence, their number was increased; and I know not how it will be proved, that if he had written less, he would have written better; or that indeed he would have undergone the toil of an author, if he had not been solicited by something more pressing than the love of praise."

Johnson's Life of Dryden

If, the imperative mode of the verb give, formerly written gif, the regular imperative of the Saxon gifan—used to introduce a supposition of what is expressed in the following words.

the—a definitive, used to limit the sense of excellence in its application to, "Dryden's Works"—that particular excellence.

excellence, a name or noun, the nominative to the verb was, or the subject of the passive verb was lessened.
of—a preposition, preceding Dryden's Works, and showing the relation of those words to excellence, which relation is that of property or possession—of the works of Dryden.

Dryden's, a proper or appropriate name—that is, a name belonging to an individual, and not to a species—in the possessive case; governed by works.

works, a name in the plural number, following of.

was lessened—the passive form of the verb to lessen, in the past tense, indefinite, conditional mode, third person singular, agreeing with excellence, its nominative. This form of the verb is composed of the substantive verb was, and the participle or verbal in ed.*

by—a preposition.

his—an attribute agreeing with indigence.

indigence—a name in the singular number, following the preposition by.

close—its substantival nominative.

number—a name, the nominative to was increased.

was increased; the passive form of the verb increase, in the past tense indefinite of the Declarative mode, third person singular, agreeing with number.

and—a connective of the two sentences, the preceding and the following—The sense is complete at increased, and there the sentence might have been closed; but as other clauses are added by the writer, the pause is marked with a semicolon.

I—a substitute for the writer's name, or a personal substitute—nominative case to know.

know—a transitive irregular verb, affirming a fact, and therefore in the Declarative mode—first person singular, in the present tense indefinite, agreeing with I.

* If Johnson had followed the common grammars, or even his own, which is prefixed to his Dictionary, he would have written were—"If the excellence of Dryden's works were lessened"—Fortunately this great man, led by usage rather than by books, wrote correct English, instead of grammar.
PRACTICAL GRAMMAR.

not—a modifier of the verb know, rendering the affirmation negative.

how—a modifier of the verb, will be proved.

it—a substitute of neuter gender, nominative case—representing the subsequent part of the sentence—the nominative to will be proved—inceptive, that is, introducing the verb, before the sentence or clause which is the real nominative.

will be proved—the passive form of the verb prove in the future tense, third person singular, agreeing with the nominative it.

that—a substitute representing the same part of the sentence as it—how it will be proved—viz—that which follows.

if—as before—an obsolete imperative verb, used as a modifier of the sense, introducing a condition.

he—a substitute for Dryden—nominative to had written.

had written—a transitive verb, in the prior past tense, indefinite, subjunctive or conditional mode, third person singular, agreeing with he.

less—an attribute in the comparative degree, here used as a substitute for a smaller quantity, the object after the transitive verb, had written.

he—a substitute for Dryden, nominative to would have written.

would have written—the irregular verb write, in the prior past tense indefinite, potential mode, third person singular, agreeing with he.

better—an attribute qualifying the action of the verb would have written—describing the manner of action—in the comparative degree.

or—a connective of the sentences between which it stands, and expressing an alternative.

that—a substitute representing the part of the sentence which follows—the words, I do not know how it will be proved, are here understood before that.
indeed—a modifier, or rather a compound of in and deed—a preposition and name.

he—as before—nominative to would have undergone.

would have undergone—the irregular compound verb undergo, in the prior past tense of the potential mode—agreeing with he, the third person.

the—a definitive, limiting the sense of toil, to a particular kind—the toil of an author.

toil—a name or noun, in the singular number—the object after the transitive verb, would have undergone.

of—a preposition.

an—a definitive, limiting the subsequent word to one person, without designating the particular person.

author—a name in the singular number, following of.

if—as before, expressing a condition.

he—a substitute as before, nominative to had been solicited.

had been solicited—the passive form of the verb solicit, rendered negative by the modifier not, in the prior past tense of the conditional mode, third person singular agreeing with he.

by—a preposition.

something—a name, composed of, some, and thing—following by.

more—an attribute of the comparative degree, used to modify the sense of pressing.

pressing—a verbal or participle of the present tense of the verb press; but used as an attribute of the preceding word something.

than—a connective, uniting the following words in construction, with the preceding.

the—a definitive, restraining the sense of love.
PRACTICAL GRAMMAR.

love—a name, the nominative to the verb is understood.
of—a preposition.
praise—a name—following of.

Critical Notes.

"I persecuted this way unto the death. Acts 22. 4.

As no particular sort of death is here intended, the definitive the ought to have been omitted. Lowth.

"When he, the spirit of truth is come, he will guide you into all truth." John 16. 13.

As the sense is probably all evangelical truth, and not other kinds of truth, Lowth supposes the definitive the ought to have been used; all the truth, agreeable to the original Greek. This criticism is probably just; but the student must be cautious of following implicitly the use of the Greek article; for nothing is less determinate; and Lowth himself acknowledges that it has puzzled all the Grammarians to reduce the use of it to any clear and certain rules. In the New Testament, it is often used in passages where it is not admissible in an English translation. Math. 3. 8. "Bring forth therefore fruits meet for repentance"—in the Greek, worthy of the repentance. Verse 11. —"Whose shoes I am not worthy to bear"—in the original, whose the shoes. In the same verse—"He shall baptize you with the Holy Ghost"—in the original, with Holy Ghost. Math. 18. 8. It is better for thee to enter into life halt or maimed—in the original, into the life. Same chapter, verse 2.—"And Jesus called a little child unto him"—in the original, there is no definitive—And Jesus calling child—Verse 3. "Except ye he converted and become as little children"—in the original, as the children. Math. 22. 13. "There shall be weeping and gnashing of teeth"—in the original, there shall be the [or this] weeping—and the gnashing of the teeth. Ch. 24. 3. "Upon the mount of the olives." Rom. 7. 1. "Know ye not, brethren, [for I speak to them that know the law] how that the law;" in the original, I speak to them that know law.
A PHILOSOPHICAL AND

Verse 2. "For the woman that hath a husband, is bound by the law"—in the original bound by law. Verse 8. "For without the law, sin was dead." orig. Without law. Verse

21. "And he find there a law." orig. I find there the law. A multitude of similar passages may be cited to prove how little is the analogy between the Greek and English Languages, in regard to the use of the definitives.

But to place this fact in a stronger light, let it be observed, that the Greeks used both the article or definitive in conjunction with the pronoun this—that is, two definitives with the same word. Rom. 7. 24. "Who shall deliver me from the body of this death." orig. from the body of the this death. Math. 4. 3. "If thou art the son of God, command that these stones be made bread." orig. the these stones. This is a common idiom of the Greek, and one utterly repugnant to the genius of the English.

Equally singular is the use of the Greek article, before proper names—Math. 2. 22, "He turned aside into the parts of Galilee." orig. —into the parts of the Galilee. ch. 17. 1, "Jesus taketh Peter." orig. the Peter.—ch. 3. 1, "Preaching in the wilderness of Judea" orig. of the Judea.

We cannot therefore draw any general inference, respecting the extent of the signification of words in English, from the use of the Greek article. Indeed there are many cases where this article must be omitted, or utterly pervert the true meaning. Math. 11. 8. "Behold they that wear soft clothing, are in kings houses."—in the original—in the houses of the kings, ver. 11. "among them that are born of women, there hath not risen a greater than John, the Baptist." in the original, them that are born of the women.

In other cases, the English the must be used where no article is found in the Greek, as in Math. 11. 5. The blind receive their sight—the lame walk—the lepers are cleansed—and the deaf hear." Here is no article in the Greek, but in English, it cannot be omitted, except before lepers.

Of the arbitrary and uncertain use of the definite article, the French language furnishes abundant proof.

"L’avarice est de tous les vices, le plus odieux."
The avarice is the most hateful of all the vices.

"Le gouvernement doit avant toutes choses protéger les propriétés." The government ought before all things to protect the properties. "Theophraste loue l'hospitalité et il a raison." Theophrast praises the hospitality, and he has reason. 

Barrett. Trans. of Cicer. de Off.

The use of the to before names of general application, is wholly arbitrary and useless, but established by custom.

Some author, I think Blair, boasts of the superiority of the English, over the Latin language, in the use of articles. This is a great error. The Latin unus is the English an—and is, ille, hic answer all the purposes of the, this and that. The Romans used these definitives when they wanted them, nor is any part of their writings left obscure for want of other articles.

"Truly, this was the son of God." Math. 27. 54.—Lowth supposes that the should be a, as this was spoke by a pagan who probably believed in a plurality of Gods. So also in Dan. 3. 23.

In this passage, "About an eight days." Luke 9. 28. an is redundant or improper. Lowth.

"Nevertheless; Asa his heart, was perfect with the Lord." 1. Kings. 15. 14. This mode of expressing possession is obsolete.

"The more shame for ye." The use of ye in the objective is admissible only in the comic and burlesk style. Lowth.

In popular practice, that and this are often followed by there and here—that there house.—this here tree. This idiom is probably as old as Language—and is not a corruption. It existed in the Celtic—an high-ad—that house—there— and the French language has preserved it—Cette maison la—it might have had its origin in the poverty of the primitive languages of the world; or it might have proceeded from the practice of pointing to objects described, or from the Saxon genitive of this; thisere; but in the improved style of modern language, it is unnecessary, and in English, is confined to the vulgar and colloquial style.
"I had rather," is probably a mistake for "I would rather," but the error, at least in colloquial language, seems incorrigible.

"The rules of our religion, from which we are swerved." Tillotson. The passive form of *swerve* is obsolete.

"Flee thee away:" "Was entered into a conspiracy:" "To vie charities:" "Take pains to agree the sacred and profane chronology:" are incorrect; for intransive verbs do not admit the passive form, nor an object after them.

"Succeed," tho' numbered among intransitive verbs, has obtained a general use in a transitive sense — "Succeed the means of grace," is the customary language of divines and well authorized.

"If Jove this arm succeed" Pope.

In the words *abed, ashore,* &c. and before the participles, *acoming, agoing, ashooting,* *a* has been supposed a contraction of *on* or *at.* It may be so in some cases; but with the participles, it is more probably a contraction of the *ag* and *air* of the Celtic nations. In the Galic dialect, the regular participles are formed by prefixing these particles—*as, ag iarridh*—seeking. In the Irish the participle is formed by prefixing *ag* to the infinitive—*as ag radh*—saying—*ag i the eating.* This particle, in a rapid enunciation, has lost the consonant and become *a.*

"In him who is, and him who finds, a friend" Pope.

Lowth condemns this use of a noun in the nominative and objective at the same time; but without reason, as the cases are not distinguished in English.

In the use of *mistaken,* there is a singularity, which deserves notice. When applied to persons, it is equivalent to being wrong or in an error. "I am mistaken—you are mistaken"—mean, I am in an error, you are in an error. But applied to things, it signifies *misunderstood;* his words or opinions are *mistaken,* that is, *misunderstood.*

*As* used for *that* in the following sentence, and in similar cases, Lowth condemns as improper or obsolete—"the relations are so uncertain as they require a great deal of examination." Bacon. This use of *as* is obsolete; but
is genuine English—as being a word of the same class and import as that.

It is a popular mistake to use wives for the possessive wife's. "It is at my wife's disposal" is correct; but not, at my wives disposal.

On the other hand, printers err in using proofs for proofs, in the plural.

Latter refers both to time and place—later, to time only.

We sometimes hear the strongest of the two, used for the stronger of the two. In such cases, the comparative degree is the more correct.

Then and above are often used as attributes; the then ministry; the above remarks; nor would I proscribe this use. It is well authorized and very convenient.

Johnson observes, "A has a peculiar signification, denoting the proportion of one thing to another; as "the landlord hath a hundred a year." But the only peculiarity of this use, is, that no preposition is employed. This and similar expressions are the primitive idiom of the language—as men originally communicated ideas chiefly by names, verbs and attributes, without connectives. The expression is perfectly good English.

Averse, in Lowth's opinion, should be followed by from; but why, any more than repugnant, or unwilling? Practice has established the use of to, with propriety.

The verb lay is often used for lie—I will lay down. Lay is transitive—I will lay myself down. When no object follows, the intransitive verb lie should be used; let him lie down.

The word rather is used to express a small degree of excess; "She is rather profuse in her expenses. In like manner is used full; "the coffee is full strong," Priestley.

The signification of words in construction, sometimes depends on the tone of voice with which they are uttered; thus, "I cannot find one of my books," if uttered without any peculiar force of voice upon one, means that one of my books is missing. But with an emphasis upon one, it means that all are missing. Thus, if I say "No laws are better than the English," the word no uttered without em...
phasis makes me declare the English to be the best laws—
with emphasis, it makes me affirm them to be worse than
none.

In the following sentence, an important distinction is
made by the definitive a—“He behaves with a little re­
verence.” This is positive and rather praises, than disprai­
es. But omitting a—“He behaves with little reverence,”
and I rather dispraise the person. Thus, when I say
“There were few men present,” I speak of the number as
inconsiderable by way of diminution—But there were a few
men present,” I intend to represent the number in the
most favorable light. Priestley.

When we say “half a dollar,” we mean in value only—
but “a half dollar,” means a coin or piece of money.
In this mode of expression, “He looks him full in the
face,” the is used for his, which is rendered unnecessary by
the use of him proceeding. Priestley.

There are many grammatical errors in the writers of
the 16th and 17th centuries, which Lowth, Priestly, Blair
and Campboll have enumerated in their respective works,
and many of them are copied into Murray’s Grammar.
But the greatest part of them are now so perfectly obso­
lete, that students are in no danger of learning them, either
from books or common practice; and it seems to be inex­
pedient to swell the size of a modern Grammar, by criti­
cisms upon modes of writing no longer used.

On the Grammars of the Greek, Latin and French
Languages.

I have remarked in the Preface, that many of the alter­
ations introduced into this work, are as applicable to other
languages as to the English. This subject deserves il­lustra­
tion.

It is an unquestionable truth, that the particles or inde­
clinable parts of speech, are mostly or all derived from the
declinable, and chiefly from names, verbs and attributes.
Bonar, in a disquisition on the subject,* and Jones in

his Greek Grammar, have attempted to trace the eighteen Greek prepositions, to their radicals, and Jones has succeeded in satisfying my mind, as to most of his etymologies. I will not here enter upon this subject—but will offer a few examples to show how imperfectly the original of words, and the true structure of sentences, have been understood.

"For I know that in me, that is in my flesh, dwelleth no good thing." Rom. 7. 18. Here the first that, in Greek \( \eta t \), is called a conjunction; whereas it is the neuter pronoun—that is, a substitute for the following part of the sentence—"In me, that is in my flesh, dwelleth no good thing— I know that." Similar examples of the use of this word, are to be found in every page of Greek.†

"The boys attend school, where they spend their time in learning the principles of justice—and they say \( \eta t \; \epsilon j i \; \tau o u \; \epsilon \kappa o n t a t \)"—Xenoph. Cyrop. 1. Here \( \eta t \) represents the following part of the sentence—they say that (which follows) they come for this purpose. The touto, is a substitute for the first part of the sentence—the boys go to school for this purpose—to learn justice.

The principles explained in this work throw much light on what are called impersonal verbs. Mark. 1. 2. As \( \varepsilon t \) is written in the prophets " Behold I send my messenger before thy face, who shall prepare thy way before the—" Here the whole passage cited is the nominative to \( \varepsilon g r a f t e t \) that is written in the prophets. In English \( \varepsilon t \) precedes the verb, but, as has been observed, it is the representative of the sentence which follows.

"Sed animal advertendum est diligentius, quæ natura rerum sit." Cicero de off. lib. 2. 20. Here the last member of the sentence is the real nominative to the verb \( \varepsilon t \)—what is the nature of things, is to be considered.—It is observable that in this form of construction, where a sentence or member is the nominative, the participle or attribute is of the neuter gender.‡

"Quamquam te, Marce fili, annum jam audientem Cratippum, idque Athenis, abundare oportet praecipit in—"

† \( \eta t \) and the Latin \( a t \), as well as \( t h a t \), are probably the Hebrew \( a t \).

‡ Yet some verbs appear to be really impersonal, as pugnatum est sub muris." It was fought under the walls.
A PHILOSOPHICAL AND

stitutisque philosophiae”—ibm. 1. 1.  “Altho, Marcus, it behoves you, who have now attended Cratippus a year at Athens, to be well furnished with the precepts and maxims of philosophy”—Here the last part of the sentence is really the nominative to oportet. To be well initiated in the principles of philosophy becomes you my son, who enjoy the advantage of the institutions of Cratippus, at Athens, the seat of science and the arts. The same remark is applicable to licet, libet, lubet, fitacet, &c. “Si placet tibi audire” if to hear pleases you.

“Homo autem, (quod rationis est particeps, per quam consequentia cernit,) facile totius vitae cursum videt.” ibm. ca. 4. In this sentence, we find quod marked as an adverb or conjunction; but in fact, it is the representative of the following clauses—Man—that he is a partaker of reason, by which he discerns consequences,) readily sees the whole course of life. We usually translate quod in such cases, by because, as or since; but these words amount, when scrutinized, to the same thing—they are only different terms to express a reason, cause or purpose; and if that does not as readily suggest the idea, it is solely from the influence of habit. In examining the principles of language, we are not to rest satisfied with knowing what it is, in popular understanding; but how it was made and of what materials it is composed.

No Latinist wants to be informed that quamobrem is the union of quam ob rem, in one word—as are quomodo, quare, interea, praeterea—nor that qualibet—is quam or quid—and libet—what you will—as quamvis—is, quam and vis, in a like sense—quaqua is the mere reduplication of the relative in the ablative case—e, translated thither is merely the ablative of the pronoun—and hic, whether relating to a person or place, is the same word—hic, he or this man—hic, in this place.

But the French exceeds all languages in the number of nouns, verbs and adjectives, which are thrown into the common sink of adverbs, conjunctions and prepositions. Thus autre fois, aujourd’hui, cependant, autour, autant, peuquoi, peut-être, are denominated adverbs—autant que pourvu que, a condition que; de sorte que, pendant que are called
PRACTICAL GRAMMAR.

conjunctions—concernant, suivant, attendu, joignant, pendant, excepté, all regular verbalis or participles, are classed among the prepositions. Yet it would be far better to resolve all words and phrases according to their original principles, as far as it can be done. " Il est, peut-être, difficile de ranger sous l'ordre de la nature la divination qui vient de l'art et de l'étude." Morabins, Trans. Cic. de Divin. liv. 1.

It is difficult to rank, in the order of nature, the divination which proceeds from art and study—all this—peut-être—may be. In strictness, the whole sentence or proposition which is affirmed to be possible, is the nominative to peut-être. Ce pendant—that pending, admitting that to be the fact, is the case absolute or independent. Pendant que, that depending, during that—pourvu que—that being provided.—" J'ai quelque chose à vous dire concernant cette affaire." I have something to say to you, concerning that affair. Here concerning retains its verbal signification, as in English, and relates to or agrees with the preceding part of the sentence. " J'obeis suivant vos ordres." I obey, following your orders. " Il travaille toute la semaine excepté le dimanche. He labors the whole week, sunday excepted—that is, sunday being excepted—the case independent.—Parce que—because—that is, for that which follows—Parce que il pretend qu'il y a dans la nature des signes des choses—Par, the preposition, ce the pronoun or definitive, and que the substitute representing the following part of the sentence. " Soit qu'il parte ou qu'il demeure. Whether he goes or stays—that is, Be it, soit que—be that fact which is expressed by il parte—que is a substitute or relative referring to the following affirmation—il parte—and the nominative to soit. In the second member of the sentence soit is understood before que.

The sentence fully expressed would stand thus; soit que—il parte; ou soit que, il demeure. Be that, he goes; or, be that, he remains.

These criticisms, already extended to an inconvenient length, considering the limited nature of this work, may serve to show the reader, how artificial and arbitrary are the distribution and denominations of the several species of words, in our grammars, and how ill calculated are the common rules to illustrate the origin or the true princi-
Before a language can be correctly understood, words must be traced to their source, their radical significations explained, their mutations, contractions, and combinations, developed. It is not the English language only whose history and principles are yet to be illustrated; but the grammars and dictionaries of all other languages, with which I have any acquaintance, must be revised and corrected, before their elements and true construction can be fully understood.

Corrections.
